Important Safety Instructions
Read all warnings and instructions in this manual and in manual 308955. Save all instructions.

					
SKIN INJECTION HAZARD					
High-pressure fluid from dispensing device, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. Get immediate surgical treatment.					
<ul style="list-style-type: none"> • Do not point dispensing device at anyone or at any part of the body. • Do not put your hand over the fluid outlet. • Do not stop or deflect leaks with your hand, body, glove, or rag. • Follow the Pressure Relief Procedure when you stop dispensing and before cleaning, checking, or servicing equipment. • Tighten all fluid connections before operating the equipment. • Check hoses and couplings daily. Replace worn or damaged parts immediately. 					

Pressure Relief Procedure

Follow the Pressure Relief Procedure whenever you see this symbol.

--	--	--	--	--	--	--

- This equipment stays pressurized until pressure is manually relieved. To help prevent serious injury from pressurized fluid, such as skin injection, splashing fluid and moving parts, follow the Pressure Relief Procedure when you stop spraying and before cleaning, checking, or servicing the equipment.
- To prevent system over pressurization, a pressure relief valve (PN 115122) must be used in conjunction with all vent valve installations. Failure to comply with this warning could result in serious injury.

1. Disconnect power from Lubrication Controller.
2. Disable air supply to pump by one of the following means:
 - Close bleed-type air valve.
 - Disconnect quick disconnect air coupler from tee on vent valve.
