Vacuum Regulator

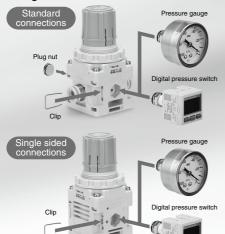

IRV10/20 Series

Easy to attach/detach the pressure gauge or digital pressure switch due to attachment by clip.

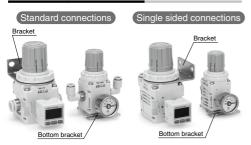

Mounting direction of the pressure gauge or digital pressure switch can be changed. (Standard connections only)

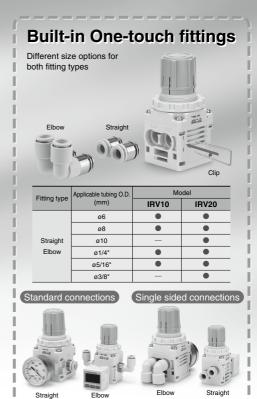

Mounting angle of the pressure gauge or digital pressure switch can be changed easily (in 60 degree increments).

Note 1) Use caution it varies depending on the pressure in vacuum pump side.

Note 2) For vacuum regulators with a pressure gauge, the pressure gauge will be damaged if positive pressure is supplied. In the event that positive pressure is applied, the vacuum regulator will not be damaged; however, the main valve will open and positive pressure will enter the vacuum pump. This may cause malfunction of the vacuum pump, when the vacuum regulator is used in the adsorbing and transferring system, refer to the following piping example and avoid supplying positive pressure to the vacuum pump. The vacuum regulator cannot adjust positive pressure.

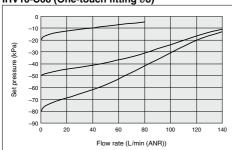

Flow Rate Characteristics (Representative Value)

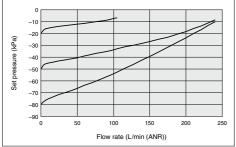

Vacuum pump exhaust speed: 2500 L/min VAC side pressure: -101 kPa (At initial setting)

Conditions:

IRV10-C08 (One-touch fitting Ø8)

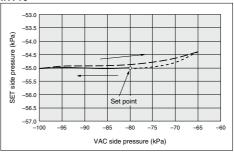

IRV20-C10 (One-touch fitting Ø10)

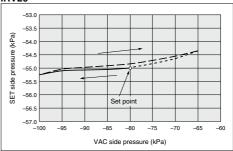

Pressure Characteristics (Representative Value)

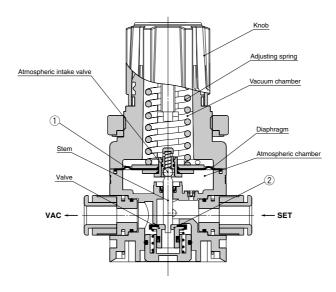

IRV10

IRV20

Construction

Working principle

When the knob is turned to the right (clockwise), the adjusting spring's generated force pushes down the diaphragm and the valve. This connects the VAC side and SET side, and the degree of vacuum on the SET side increases (becomes closer to an absolute vacuum). Furthermore, the SET side is vacuum chamber, where it is applied to the top side of the diaphragm and counters the adjusting spring's compression force; and this adjusts the SET side pressure. When the degree of vacuum on the SET side is higher than the designated setting value (becomes closer to an absolute vacuum), the balance between the adjusting spring and the SET side pressure in the vacuum chamber is lost, and the diaphragm is pushed up. This causes the valve to close and the atmospheric intake valve to open, which lets atmospheric air into the SET side. When the adjusting spring's compression force and the SET side pressure are balanced, the SET side pressure is set. Also, when the degree of vacuum of the SET side pressure is lower than the designated setting value (becomes closer to the atmosphere), the balance between the adjusting spring and the vacuum chamber is lost, and the diaphragm is pushed down. This causes the atmospheric intake valve to close and the valve to open, which lets air into the VAC side. When the adjusting spring's compression force and the SET side pressure are balanced, the SET side pressure is set.

1 Integrated Digital Pressure Switch for Panel Mounting

Symbol X1

How to Order

Dimensions

IRV10/20 Series Specific Product Precautions 1

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 387 to 391 for Common Precautions.

Handling

⚠ Warning

- When a system hazard can be expected due to a drop in vacuum pressure caused by power loss or vacuum pump trouble, install a safety circuit and configure the system so that it can avoid the danger.
- When a system hazard can be expected with trouble with the vacuum regulator, install a safety circuit and configure the system so that it can avoid the danger.

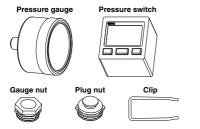

↑ Caution

- When installing a pressure gauge or pressure switch on an existing regulator, be sure to reduce the set pressure to 0 (atmospheric pressure) before removing the plug.
- Purchased with the pressure gauge or pressure switch
 - 1-1. Accessories
 - Pressure gauge or pressure switch 1 pc.
 - Gauge nut (with O-ring) ------1 pc.

Note) Gauge nut is mounted to the pressure gauge or pressure switch.

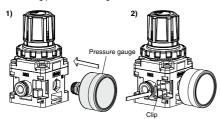

- Plug nut (with O-ring) ------ 1 pc.
- Clip ------2 pcs.

Note) One clip is included for single sided connections. Plug nut is not included.

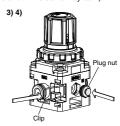

1-2. Mounting of the pressure gauge or pressure switch

- Confirm the direction of VAC side and SET side. Insert the pressure gauge to the gauge port sufficiently (until the gauge nut of the pressure gauge is level with the product surface.) Insert the pressure gauge to the end on the opposite side of the connecting port for single sided connections.
- 2) Insert the clip from the left side (viewed from the pressure gauge side, as shown in the drawing) until the top of the clip is level with the product surface. This completes the mounting procedure for single sided connections.

∧ Caution

- Insert the plug nut to the gauge port on the opposite side of the pressure gauge until the top of the plug nut is level with the product surface.
- 4) Insert the clip from the left side (viewed from the plug nut side) to the end in the same way as 2).

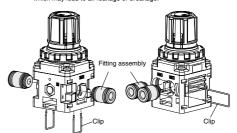

Note) To remove the pressure gauge or pressure switch, remove the clip, then remove the pressure gauge or pressure switch straight out. Do not apply torque, as the body is made of resin.

- Do not remove the body screw while the vacuum pressure is applied.
- Before removing the valve guide for inspection, reduce the set pressure to 0 (atmospheric pressure) and also shut down the vacuum pump pressure completely.
- 4. For ease of replacement, One-touch fittings are installed as the cassette type. One-touch fittings are retained with clips inserted from the directions illustrated below. Remove the clips with a flat head screwdriver to replace the One-touch fittings. (Refer to "Procedure to remove the clip.") When installing, insert each One-touch fitting deeply to the end and reinsert the clip to the specified position.

Note 1) Before replacement, confirm VAC/SET pressure is not applied and start operation after the internal pressure becomes atmospheric pressure. Operation with VAC/SET pressure is dangerous.

- Note 2) To remove the clip, hold the clip with your fingers, then slowly pull out the clip. Do not pull out the clip by force. Otherwise, the clip may spring out and it is dangerous.
- Note 3) Insert the clip to the end after confirming the replacement parts are inserted to the end. The clip may spring out if it is not inserted sufficiently.
- Note 4) Hold the fitting in your hand when inserting the tube to elbow type One-touch fitting, Insertion of the tube without holding the fitting in your hand will apply excess force to blocks or One-touch fitting, which may lead to air leakage or breakage.

IRV10/20 Series Specific Product Precautions 2

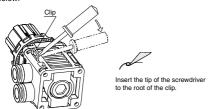

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 387 to 391 for Common Precautions.

Handling

∧ Caution

Procedure to remove the clip

Apply the tip of a flat head screwdriver to the inclined part where the clip is inserted. Lift the clip by moving the screwdriver as illustrated below.

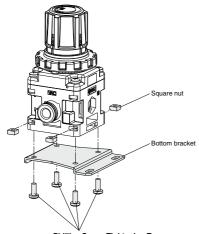

△ Warning

1. Observe the proper screw tightening torque.

If torque is exceeded, damage to the mounting screw or main body may occur. Also, if the screws are not tightened enough, the screws may come loose during operation.

Tightening torque of Phillips screw for mounting bottom bracket

Phillips Screw Tightening Torque

For IRV10(A): M3	0.32 ±0.03 N·m
For IRV20(A): M4	0.76 ±0.05 N·m

Operating Environment

∧ Warning

- Do not use in an atmosphere having corrosive gases, chemicals, sea water, water, water steam, or where there is direct contact with any of these.
- 2. Do not use in locations influenced by vibrations or impacts.
- 3. This vacuum regulator always uses atmospheric air, therefore, do not use in dusty environments.
- In locations which receive direct sunlight, provide a protective cover, etc.
- In locations near heat sources, block off any radiated heat.

Vacuum Supply

⚠ Caution

- This vacuum regulator is not to be used for adjusting vacuum pump pressures.
- Note that the ejector is not applicable to "vacuum supply" since the flow rate of the ejector is smaller than that of this vacuum regulator and changes in pressure by the flow rate are large. For details about elector characteristics, refer to relevant ejector catalog.

Air Supply

⚠ Caution

- These products are designed for use with air. Please contact SMC if any other fluid will be used.
- 2. Do not use air which includes chemicals, synthetic oils containing organic solvents, salt, or corrosive gases, etc., as this can cause malfunction.

IRV10/20 Series Specific Product Precautions 3

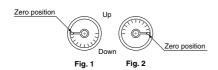

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 387 to 391 for Common Precautions.

Precautions

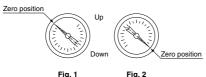

∧ Caution

- 1. Connect piping to the port with "VAC" indication for connection to the vacuum pump.
- To adjust the pressure, turn the knob to the right (clockwise) for changing "atmospheric pressure to vacuum pressure" and to the left (counterclockwise) for changing "vacuum pressure to atmospheric pressure".
- 3. When adjusting pressure, do not touch the lateral hole (atmospheric intake hole) of the body.
- 4. When locking the knob after setting the pressure, press down the knob until the orange band is hidden and a click is heard. On the other hand, when unlocking the knob, pull it up until the orange band is visible and a click is heard.
- 5. When the vacuum pump capacity is relatively small or when the inside diameter of the piping is small, a change in the set pressure (the pressure difference between the non-flow and flow conditions) may be large. In this case, change the vacuum pump or the inside diameter of the piping. When changing the vacuum pump is not possible, add a capacity tank (the capacity depends on the operating conditions) to the VAC side.
- 6. The pressure response time after opening and closing of valves (such as solenoid valves) is influenced in large and small measures by the internal capacity (includes piping capacity) of the set side. Since the vacuum pump capacity also affects the response time, consider all these points before operations.
- 7. When using a pressure gauge upside down like Fig. 1, it may result in a shifting of the zero point reading. Make sure to use it in the direction like Fig. 2. Gravity will affect the zero point of the gauge which is why it needs to be positioned properly.

IRV10

IRV20

∕∆Warning

If the product to be returned is contaminated or is possibly contaminated with substances that are harmful to humans, for safety reasons, please contact SMC beforehand and then employ a specialist cleaning company to decontaminate the product. After the decontamination prescribed above has been carried out, submit a Product Return Request Sheet or the Detoxification/Decontamination Certificate to SMC and await SMC's approval and further instructions before

Please refer to the International Chemical Safety Cards (ICSC) for a list of harmful substances.

attempting to return the item.

If you have any further questions, please don't hesitate to contact your SMC sales representative.
