## Precision Cylinder

## MTS Series

ø8, ø12, ø16, ø20, ø25, ø32, ø40

## Precision Cylinder

## Precision Cylinder

## Non-rotating accuracy: $0.1^{\circ}$ or less

( $0.2^{\circ}$ or less for $\varnothing 8$, within allowable torque values)

## MTS8

Short mounting pitch: 15 mm

## Small size $\varnothing 8$ introduced to series

Rod through-hole allows
vacuum piping (Made-to-order).
Lifting and transfer of small electronic parts is possible with short mounting pitch.

Piping is possible from two directions.

Uses new type compact auto switches ( $\varnothing 8$ only). Two auto switches can be mounted even with the minimum 5 stroke ( mm ).

Mounting space reduced

## Two types of rod

 end configurationStandard: Rod end female threads Option: Rod end male thread (Using stud bolt)

Three types of mounting are possible

Auto switch capable on four sides
(Two sides for $\varnothing 8$ )

## with Internal Guide Function.

## MTS Series

## Deflection: 0.1 mm or less

(For MTS12-25, within allowable lateral load values)

Reduced labor for design and assembly

Mounting is possible in high accuracy.

Parallelism of mounting surfaces (side, bottom) to rod: 0.1 mm or less Squareness of mounting surface (front) to rod: 0.1 mm or less

## Air cushion standardized

 ( 08 equipped with rubber bumper)Rear end lock type added to series ( $\varnothing 12$ to $\varnothing 40$ )

Sealing and durability equivalent to current round rod models have been achieved with a specially configured rod seal.

## Application Example

Stroke adjustment mechanism/ Made to Order Specifications
Stroke adjustment is possible on the rod extension side. Stroke adjustment range: 0 to 10 mm (ø8)
: 0 to $25 \mathrm{~mm}(\varnothing 12$ to $\varnothing 40)$

## MTS Series

## Model Selection

## $\triangle$ Caution Confirmation of theoretical output is required separately. Refer to "Theoretical Output" on page 385.

Selection Conditions/Follow the tables below in order to determine selection conditions and choose one selection graph.

## Vertical Mounting

| Mounting orientation |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Maximum speed (mm/s) |  | Up to 100 | Up to 200 | Up to 300 | Up to 400 | Up to 500 | Up to 600 | Up to 800 |
| Stroke (mm) |  | All strokes |  |  |  |  |  |  |
| Selection graph | ø8 | (1) | - | (2) | - | (3) | - | - |
|  | ¢12 to 40 | - | (4) | - | (5) | - | (6) | (7) |

## Horizontal Mounting

| Selection | ø8 | (8) | (9) | (10) | (11) | (12) | (13) | - | - | - | - | - | - | - | - |
| graph | 012 to ø40 | - | - | - | - | - | - | (14) | (15) | (16) | (17) | (18) | (19) | (20) | (21) |

* L: Overhang The distance between the cylinder's central axis and the load center of gravity

## © Caution

- In the case of horizontal mounting, when the load center of gravity is beyond the rod end, add that distance to the stroke to select a graph.

## Selection Example

1. Selection conditions

Mounting: Vertical Maximum speed: $800 \mathrm{~mm} / \mathrm{s}$ Overhang: 50 mm Load mass: 2 kg

Refer to graph (7) based on vertical mounting and the maximum speed of $800 \mathrm{~mm} / \mathrm{s}$. On graph (7), find the intersecting point for the overhang of 50 mm and the load mass of 2 kg to determine $ø 32$.
2. Selection conditions $\left\{\begin{array}{l}\text { Mounting: Horizontal } \\ \text { Maximum speed: } 600 \mathrm{~mm} / \mathrm{s} \\ \text { Stroke: } 125 \mathrm{~mm} \\ \text { Overhang: } 80 \mathrm{~mm} \\ \text { Load mass: } 0.7 \mathrm{~kg}\end{array}\right.$

Refer to graph (16) based on horizontal mounting, the maximum speed of $600 \mathrm{~mm} / \mathrm{s}$, and 125 mm stroke. On graph (16), find the intersecting point for the overhang of 80 mm and the load mass of 0.7 kg to determine ø25.

Vertical Mounting

Graph (2) Maximum Speed: Up to $\mathbf{3 0 0}$ ( $\mathrm{mm} / \mathrm{s}$ )

Graph (3) Maximum Speed: Up to 500 ( $\mathrm{mm} / \mathrm{s}$ )

## ø12 to ø40

Graph (6) Maximum Speed: Up to $600(\mathrm{~mm} / \mathrm{s})$

Graph (7) Maximum Speed: Up to $800(\mathrm{~mm} / \mathrm{s})$

## MTS Series

Horizontal Mounting

## ø8

Maximum speed: Up to $\mathbf{3 0 0}$ mm/s
Graph (8) Stroke: Up to 10 stroke

Graph (9) Stroke: Up to 20 stroke

Graph (10) Stroke: Up to 30 stroke

Maximum speed: Up to 500 mm/s
Graph (11) Stroke: Up to 10 stroke

Graph (12) Stroke: Up to 20 stroke

Graph (13) Stroke: Up to 30 stroke

Maximum speed: Up to $600 \mathrm{~mm} / \mathrm{s}$
Graph (14) Stroke: Up to 50 stroke

## MTS Series

Spline Rod Displacement

## Warp Angle

Displacement angle of spline rod due to torque load
The displacement angle when a static load is applied in the direction of the arrow, with the spline rod retracted.

$\varnothing 8$

$\varnothing 12$

$\varnothing 16$

$\varnothing 20$

$\varnothing 25$

$\varnothing 32$

$\varnothing 40$

## Deflection Amount

Displacement of spline rod due to pitch moment load
Displacement of the rod end when a static load is applied in the direction of the arrow, with the spline rod fully extended.
$\varnothing 8$

$\varnothing 12$

$\varnothing 16$

$\varnothing 20$

## $\triangle$ Caution

1. Displacement may increase after an impact load has been applied.
If an impact load is applied to the spline rod, the guide unit may be permanently deformed and displacement may increase.

# Precision Cylinder <br> MTS Series <br> $\varnothing 8, \varnothing 12, \varnothing 16, \varnothing 20, \varnothing 25, \varnothing 32, \varnothing 40$ 

How to Order

Applicable Auto Switches/Refer to pages 1119 to 1245 for further information on auto switches.

| Type | Special function | Electrical entry |  | Wiring (Output) | Load voltage |  |  | Auto switch model |  | Lead wire length (m) |  |  |  | Pre-wired connector | Applicable load |  |

| 40 | MT-S40 |

* Replacement parts for rod end male thread.
* Rod end nut is attached.

## $\triangle$ Caution

## Mounting

- When attaching or removing loads, be sure to do so while securing the spline rod's width across flats and not to apply a rotating torque on the spline nut.
If rotational torque must be applied due to unavoidable circumstances, use the table below to make sure the allowable rotational torque is not exceeded.

| Bore size <br> $(\mathrm{mm})$ | $\mathbf{8}$ | $\mathbf{1 2}$ | $\mathbf{1 6}$ | $\mathbf{2 0}$ | $\mathbf{2 5}$ | $\mathbf{3 2}$ | $\mathbf{4 0}$ |

# Auto Switch Mounting 2 

## Caution on Installing in Close Proximity to Each Other

## $\triangle$ Caution

1．When cylinders are used in close proximity to one another as in mounting patterns（1）through（4），the magnetic force of the auto switch magnets in cylinder B may have an effect on the operation of the auto switches on cylinder A．The mounting pitch of cylinders should be at least the values given in the table below．
When using cylinders with different orientations or bore sizes in proximity to one another，consult with SMC．

（）：Denotes the values of D－A9 $\square$ V，D－M9 $\square$ V，D－M9 $\square$ WV and D－M9 $\square$ AV．
If cylinders are used with a mounting pitch less than shown above，they must be shielded with iron plates or the separately sold magnetic shielding plate（part no．：MU－S025）．Please contact SMC for further information．

2．Avoid wiring patterns in which bending stress and pulling force are repeatedly applied to the lead wires．
When a bending stress is repeatedly applied to the lead wires，be sure to secure the lead wire close to the switch and to maintain a bending radius of R40 to R80 or more as a guideline．
Applying a stress or pulling force to the connection part of a lead wire and an auto switch may cause broken wires，or a sheath to be dropped outs．Be sure that no force of any kind is applied to the connection part．

## MTS Series

## Caution on Using End Lock Type

## Operating Precautions

## $\triangle$ Caution

1. Do not use 3 position solenoid valves.

Avoid use in combination with 3 position solenoid valves (especially closed center metal seal types). If pressure is trapped in the port on the lock mechanism side, the cylinder cannot be locked.
Furthermore, even after being locked, the lock may be released after some time, due to air leaking from the solenoid valve and entering the cylinder.
2. Back pressure is required when releasing the lock.
Before starting operation, be sure to control the system so that air is supplied to the side without the lock mechanism. There is a possibility that the lock may not be released. (Refer to the section on releasing the lock.)
3. Release the lock when mounting or adjusting the cylinder.
If mounting or other work is performed when the cylinder is locked, the lock unit may be damaged.
4. Operate with a load ratio of $50 \%$ or less.

If the load ratio exceeds $50 \%$, this may cause problems such as failure of the lock to release, or damage to the lock unit.
5. Do not operate multiple cylinders in synchronization.
Avoid applications in which two or more end lock cylinders are synchronized to move one workpiece, as one of the cylinder locks may not be able to release when required.
6. Use a speed controller with meter-out control.

It may not be possible to release the lock with meter-in control.
7. Be sure to operate completely to the cylinder stroke end on the side with the lock.
If the cylinder piston does not reach the end of the stroke, locking and unlocking may not be possible.

## Operating Pressure

## $\triangle$ Caution

1. Apply air pressure of at least that shown in the table below to the port on the lock mechanism side. This is necessary to release the lock.

| Bore size $(\mathrm{mm})$ | Operating pressure (MPa) |
| :---: | :---: |
| $\mathbf{1 2}, \mathbf{1 6}$ | 0.17 |
| $\mathbf{2 0}, \mathbf{2 5}, \mathbf{3 2}, \mathbf{4 0}$ | 0.15 |

## Exhaust Speed

## $\triangle$ Caution

1. Locking will occur automatically if the pressure applied to the port on the lock mechanism side falls to 0.05 MPa or less. In the cases where the piping on the lock mechanism side is long and thin, or the speed controller is separated at some distance from the cylinder port, the exhaust speed will be reduced. Take note that some time may be required for the lock to engage. In addition, clogging of a silencer mounted on the solenoid valve exhaust port can produce the same effect.

## Relation to Cushion

## Caution

1. When the cushion valve on the lock mechanism side is closed or nearly closed, the spline rod may not reach the stroke end, and consequently the lock may not engage. Moreover, if the lock does engage when the cushion valve is nearly closed, it may not be possible for the lock to release. Therefore, the cushion valve should be adjusted properly.
2. Before releasing the lock, be sure to supply air to the side without the lock mechanism, so that there is no load applied to the lock mechanism when it is released. If the lock is released when the port on the other side is in an exhaust state, and with a load applied to the lock unit, the lock unit may be subjected

## MXO

MXF

## MXW

MXJ
to an excessive force and may be damaged.
Furthermore, sudden movement of the spline rod is very dangerous.

## Manual Release

## © Caution

1. Insert the bolt, screw it into the lock piston, and then pull it to release the lock. If you stop pulling the bolt, the lock will return to an operational state. Thread sizes, pulling forces and strokes are as shown below.

| Bore size (mm) | Thread size | Pulling force (N) | Stroke (mm) |
| :---: | :---: | :---: | :---: |
| $\mathbf{1 2 , 1 6}$ | $\mathrm{M} 2 \times 0.4 \times 15 \mathrm{~L}$ or more | 2 | 1.5 |
| $\mathbf{2 0 , 2 5 , 3 2}$ | $\mathrm{M} 3 \times 0.5 \times 30 \mathrm{~L}$ or more | 3 | 2 |
| $\mathbf{4 0}$ | $\mathrm{M} 3 \times 0.5 \times 30 \mathrm{~L}$ or more | 4 | 3 |

* Remove the bolt for normal operation. It can cause lock malfunction or faulty release.

[^0]:    *1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Consult with SMC regarding water resistant types with the above model numbers.
    *2 1 m type lead wire is only applicable to D-A93.

    * Lead wire length symbols: $0.5 \mathrm{~m} \ldots \ldots . .$. Nil (Example) M9NW
    * Solid state auto switches marked with " $\bigcirc$ " are produced upon receipt of order.

    | $1 \mathrm{~m} \cdots \cdots \cdots \cdot M$ | (Example) M9NWM |
    | :--- | :--- |
    | $3 \mathrm{~m} \cdots \cdots \cdots \cdot \mathrm{~L}$ | (Example) M9NWL |
    | $5 \mathrm{~m} \cdots \cdots \cdots$. | (Example) M9NWZ |

[^1]:    * Normally closed ( $\mathrm{NC}=\mathrm{b}$ contact), solid state auto switch (D-F9G/F9H type) are also available. For details, refer to page 1137.
