Valve for Water and Chemical Base Fluids

VCC Series

2/3 Port Air Operated Valve

Applicable for 2 liquid paint (VCC12D)

- PTFE diaphragm structure = Sliding part eliminated
- Less paint adhesion

Mountable on a robot arm (space-saving, lightweight)

Paint Line System

(Application example)

Water/Chemical Base Paint, Deionized Water, Cleaning Solvent type

Note) Valves must be mounted in the right direction. Refer to page 657.

Leakage detection port

Paint leakage to the pilot piping can be checked visually. Even when leakage occurs, no backflow between the paint and pneumatics.

3 port valve (VCC13)

RETURN Note 2) Valves must be mounted in the Paint circulation right direction. Refer to page 657.

2 Liquid Paint type/PTFE Diaphragm

2 port valve (VCC12D)

Note) Valves must be mounted in the right direction. Refer to

Single Paint, Solvent, Ink Control type/Single Unit

2 port valve (VCC12(D))

Manifold Valve

Separable Resin Manifold Block

- Easy addition and reduction of stations
- Tough PPS (Polyphenylene Sulfide) resin is used.
- Fluororesin is contained. (Less fluid adhesion)

VCC Series Disassembly/Assembly/ Maintenance Procedure

Cleaning Valve Element

Special tool part no.: VCC-G-C

Procedure

- 1) Loosen the orifice body with a tool and remove it.
- 2 Clean the valve.
- 3 Assemble a new orifice body.

VCC12(D)-00 (2 port valve)

VCC13-00 (3 port valve)

Tighten the screw until it hits the body by pressing the orifice body with approx. 100 to 200 N of force.

(* Additional tightening is not necessary.)

Control dimension with full length. (2 port valve: 44.8 to 45.1 mm, 3 port valve: 54.6 to 54.9 mm)

Reference tightening torque is approx. 1 to 2 N·m for VCC12(D)-00 (2 port valve), and 0.5 to 1 N·m for VCC13-00 (3 port valve).

There is a possibility of damaging threads if tightening exceeds the tightening torque range.

How to Remove the Valve

Special tool part no.: VCC-G-A, VCC-G-B (Refer to page 654.)

Procedure

- 1) Loosen the mounting nut with a tool to remove.
- 2 Remove the indicator lamp cover.
- 3 Turn 45 to 90° (idle turn) clockwise with a tool (to avoid O-ring adhesion).
- 4 Pull out the valve straight.

- 5 Wipe off residual paint on inner surface of the base with a cleaning
- 6 Replace the O-ring mounted to the valve. (O-ring part number: See page 658.)

How to Attach the Valve

Apply vaseline (commercially available) on the O-ring surface, and insert straight. (Note the direction shown on the label.)

After mounting the indicator lamp cover, tighten the mounting nut to a tightening torque of 2.5 to 3.5 N·m of tightening torque.

O-ring for air HNBR G1/4 G1/4

3 port valve

Place the arrow within ±15° of IN port position. Production lot number ON OFF

> Part no. Model label

Attach and remove the valve straight. If the paint applied to the O-ring for paint adheres to the pneumatic passage, clean it. When inserting, apply vaseline to the O-ring and the inner surface of the base and insert slowly so that the O-ring is not twisted or cut. The arrow shown on the model label of the valve is set for the optimum direction for cleaning. Mount the valve so that the arrow comes to IN port

position.

VCC

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Design

\land Warning

1. Cannot be used as an emergency shutoff valve, etc. The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. Maintenance space

The installation should allow sufficient space for maintenance activities.

 When an impact, such as water hammer, etc., caused by the rapid pressure fluctuation is applied, the solenoid valve may be damaged. Use care when handling.

Selection

1. Confirm the specifications.

Give careful consideration to the operating conditions such as the application, fluid and environment, and use within the operating ranges specified in this catalog. Also, be sure to carry out an evaluation using an actual product to ensure that problems do not occur under the working conditions.

2. Fluid

 Applicable fluid on the list may not be used depending on the operating condition.

Give adequate confirmation, and then determine a model, just because the compatibility list shows the general case.

3. Air quality

1) Use clean air.

Do not use compressed air which includes chemicals, synthetic oils containing organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.

2) Install air filters.

Install air filters close to valves at their upstream side. A filtration degree of 5 μm or less should be selected.

3) Install an air dryer or after-cooler, etc.

Compressed air that includes excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an air dryer or after-cooler, etc.

 If excessive carbon powder is generated, eliminate it by installing mist separators at the upstream side of valves.

If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause a malfunction.

Refer to Best Pneumatics No.5 for further details on compressed air quality.

4. Ambient environment

Use within the operable ambient temperature range. Confirm the compatibility between the product's composition materials and the ambient atmosphere. Be sure that the fluid used does not touch the external surface of the product.

5. Countermeasures against static electricity

Take measures to prevent static electricity since some fluids can cause static electricity.

Piping

↑ Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

Install piping so that it does not apply pulling, pressing, bending or other forces on the valve body.

2. Winding of sealant tape

When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve. Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

- Avoid connecting ground lines to piping, as this may cause electric corrosion of the system.
- Always tighten threads with the proper tightening torque.

When attaching fittings to valves, tighten with the proper tightening torque shown below.

Tightening Torque for Piping

Connection threads	Proper tightening torque N·m				
Rc 1/8	7 to 9				
Rc 1/4	12 to 14				
G 1/4	9 to 11				

5. Connection of piping to products

When connecting piping to a product, refer to its instruction manual to avoid mistakes regarding the supply port, etc.

Operating Environment

⚠ Warning

- Do not use the valves in an atmosphere having corrosive gases, chemicals, salt water, water, steam, or where there is direct contact with any of these.
- Do not use in locations subject to vibration or impact.
- Do not use in locations where radiated heat will be received from nearby heat sources.
- Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Maintenance

⚠ Caution

- 1. Filters and strainers
 - 1) Be careful regarding clogging of filters and strainers.
 - 2) Replace filter elements after one year of use, or earlier if the pressure drop reaches 0.1 MPa.
 - Clean strainers when the pressure drop reaches 0.1 MPa.

2. Storage

In case of long term storage after use with heated water, thoroughly remove all moisture to prevent rust and deterioration of rubber materials, etc.

3. Exhaust the drain from an air filter periodically.

VCC

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Design

.⚠Warning

1. Leakage detection port

The valve has leak detection area to completely separate the fluid area and pilot pressure area. If leakage is found, valve replacement and maintenance are necessary immediately. Fluids that solidify or being cured may block the leak detection so port and leak may not be detected.

2. If applying high voltage to the fluid, it must be earthed by using the bolt to mount the base.

Do not use sealing tape when piping, as it may insulate.

Selection

↑ Caution

1. Operating fluid

Eliminate \bar{a} Il solid material larger than 150 μm in the fluid to avoid valve failure.

Piping

∧ Caution

1. Piping to pilot port

Condensation may be formed in the piping to the pilot port, due to factors such as its length. The life of the valve will be shortened if condensed moisture enters the pilot port. To prevent condensation, the installation of a quick exhaust is recommended.

2. Tube attachment/detachment for One-touch fittings/ stainless steel fittings

1) Attaching of the tubing

- a Divide a tube with no external flaws at a right angle. Use tube cutter TK-1, 2, or 3 when dividing the tube. Do not use pliers, nipper pliers, scissors, etc. This may result in flattening and an inability to join, or the tube falling out and air leakage.
- b The outer diameter of polyurethane tubing will expand when internal pressure is applied, and so you may not be able to reattach One-touch fittings. Check the tubing outer diameter of all tubing other than for the release bushing, and reattach the One-touch fittings without dividing the tubing if the outer diameter precision is more than ±0.15 mm. When reattaching the One-touch fittings, check whether the tubing can smoothly pass through the release bushing.
- c Grasp the tubing, slowly push it straight (0 to 5°) into the One-touch fitting until it comes to a stop.
- d Once pushed all the way in, gently pull the tubing back, and check that it hasn't come all the way out. If not firmly inserted all the way in, it may result in air leakage and the tube falling out.

Piping

.↑ Caution

e If the union nut is loose, tighten it by hand temporarily. Then, fix the body with the tightening tool, and tighten the union nut with an appropriate wrench, applying the torque shown helow

Fitting size	Appropriate tightening rotations	Equivalent tightening torque N·m
VCK□06	1.5 to 2.0	3 to 8
VCK□08	1.5 to 2.0	4 to 9
VCK□10	1.5 to 2.0	6 to 9
VCK□12	1.5 to 2.0	9 to 12

2) Detaching of the tubing

- a Push in the release button sufficiently, pushing the collar evenly.
- b Pull the tube out while pressing so that the release button is not returned. If the release button is not pressed sufficiently, gripping will instead increase and it will become harder to pull out.
- c Before reusing the detached tube, first cut off the portion of tubing that had been gripped. Using the portion of tubing that had been gripped will lead to air leakage and the tube will become harder to detach.

3. Joining a metal rod accessory

After joining a metal rod accessory (KC series, etc.) to a Onetouch fitting, do not use a tube, resin plug, reducer, etc, as it may result in the tube falling out.

- When attaching a tube, resin plug, metal rod, etc., do not attach while pressing on the release bushing.
- When using another brand tubing, check whether the tubing material and outer diameter precision meet the following specifications.
 - 1) Nylon tubing within ± 0.1 mm 2) Soft nylon tubing within ± 0.1 mm
 - 3) Polyurethane tubing within ±0.15 mm, -0.2 mm

If tubing outer diameter tolerance is not met, do not use if tubing inner diameter differs from our brand.

This may result in inability to join, leakage, the tube falling out, and damage to the fitting.

Lubrication

1. Do not lubricate the valve.

The valve uses white vaseline as lubricant.

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Maintenance

⚠ Caution

- 1. Removing the product
 - Shut off the fluid supply and release the fluid pressure in the system.
 - 2) Dismount the product.

2. Low frequency operation

Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

3. Stoppage of line

When the line is stopped for a long time, clean the valve so that fluid (paint, ink, etc.) does not solidify or being cured.

4. Prolonged usage

Leakage may occur with fittings and tube material as they change over time. Additionally tighten union nuts. Additional tightening should be 1/6 to 1/4 turn.

If leakage occurs even after additional tightening, replace the sleeve with a new one.

- 5. Due to the characteristics of the material (Special FKM), the compression value of the O-rings of the VCC series is higher. Therefore, when disassembly or rearrangement of the product is performed, leakage may occur if the O-rings are not replaced. If disassembly or rearrangement is performed, replace the O-rings with new O-rings.
- If disassembly, rearrangement, or maintenance is performed, perform sufficient safety checks before operating the system. In addition, SMC assumes no responsibility concerning damage caused by methods other than those described in the catalog and operation manual.

Return of Product

⚠ Warning

If the product to be returned is contaminated or is possibly contaminated with substances that are harmful to humans, for safety reasons, please contact SMC beforehand and then employ a specialist cleaning company to decontaminate the product. After the decontamination prescribed above has been carried out, submit a Product Return Request Sheet or the Detoxification/Decontamination Certificate to SMC and await SMC's approval and further instructions before attempting to return the item.

Please refer to the International Chemical Safety Cards (ICSC) for a list of harmful substances.

If you have any further questions, please don't hesitate to contact your SMC sales representative.

Manifold Specification Sheet (VCC Series: VV□CC1)

Date: Year

/ Month _

/ Date

SMC Corporation
☐ Fill in this format.

Manifold Specifications — Example of how to fill in

	Valve	e type	Valve arrangement	Fitting arrangement				
د	2 port	valve	7 pcs.	IN port	ø10 x ø8 (40° swivel elbow)			
	2 nort	3 port valve 24 pcs.		IN port	ø12 x ø9 (40° swivel elbow)			
lition	3 port	vaive	24 pcs.	RETURN port	ø6 x ø5 (Male connector)			
Sono	Cleaning unit	Gate valve	1 pc.					
O	Clearling unit	Cleaning valve	4 pcs.	IN port	ø8 x ø6 (40° swivel elbow)			
			/	OUT port	ø10 x ø8 (90° swivel elbow)			
				Pilot port	One-touch fitting for ø4			

Put "M", because 2 port valves (including cleaning unit) and 3 port valves are installed together.

Seven (7) 2 port valves are installed. Since two valves are installed per manifold base, it must be an even number, so the number of valve that can be installed is "08".

* Specify four (4) stations for manifold

When twenty-four (24) 3 port valves are used, specify "24". * Specify twelve (12) stations for manifold.

Specify when the gate valve is necessary for cleaning valve. This example requires one gate valve and four cleaning valves, but specify "06" for number of valves that can be installed, as this must be an even number.

To fill in the blanks
in the manifold number, ☐ Manifold VMcc1-08 24 C4-G06 please refer to symbols in catalog. V C C 1 ☐ Valve - 0 0 Select the valve referring to the specification Pilot port piping size table. Upper table is for 2 * Fill in the symbol for stainless steel fitting. For others, mark necessary items with a circle port valve. Lower is Cleaning unit No for 3 port valve. Standard unit (with gate valve) G06 G04 G02 02 04 06 08 10 12 14 16 18 20 40 Stations 2 11/ 13/ 15/ 17/ 19/ 12/14/16/18/20 39/ 4 5 10 ั 3 /40 valve 0 % Although eight 2 port valves can be installed, if you need VCC12-00 ′₀ ∕₀ စ 70 only seven valves, select the blanking plug. The plug is 2 port 2 port valve (Diaphragm type) connected to the port with the blanking plug. VCC12D-00 VVCC12-10A-1 When more than twenty valves are used, specify valve qty. in blank column. When the same valves and fittings are required, D IN port they can be specified by arrows. 04 12 14 16 18 20 40 06 Although six gate Stations Not 13 39. valves or cleaning side) ×40 valves can be in-3 port valve (Sliding type 3 port valve options stalled, if you VCC13-00 need only five OUT Blanking plug for 3 port valv VVCC13-10A-1 valves, select the blanking plug. side itting The plug is con-IN port nected to the port with the blanking RETURN port plug

Select stainless steel fitting for IN, HETURN port from the table below, and enter the symbol into the specification table.

Symbol	Descrip	tion	Part no.
Α	For piping ø12 x ø9	40° swivel elbow	VCKK1209-02F
В	For piping ø10 x ø8	40° swivel elbow	VCKK1008-02F
С	For piping ø10 x ø7.5	40° swivel elbow	VCKK1075-02F
D	For piping ø8 x ø6	40° swivel elbow	VCKK0806-02F
E	For piping ø6 x ø4	40° swivel elbow	VCKK0604-02F

Symbol	Descrip	Part no.	
F	For piping ø12 x ø9	Male connector	VCKH1209-02F

J	For piping ø8 x ø6	Male connector	VCKH0806-02F
K	For piping ø6 x ø4	Male connector	VCKH0604-02F

1008

☐ Fill in the model number in the table below for connecting the fitting to OUT port. (See SUS316L stainless steel fitting type.)

For connecting the elbow union, piping direction is on top (IN, RETURN port side).

OUT port Stainless steel fitting V C K

r manifold block. Assign two valves in one square

Note 1) Two valves can be installed per manifold block. Assign two valves in one square Note 2) Please order cleaning unit if when the gate valve is necessary.

Note 3) When the fitting is necessary for IN, RETURN port, please order by putting necessary stainless steel fitting symbol in the port of each station. For 40° swivel elbow, piping direction is on D side.

Must be specified when the fitting is connected to OUT port.
