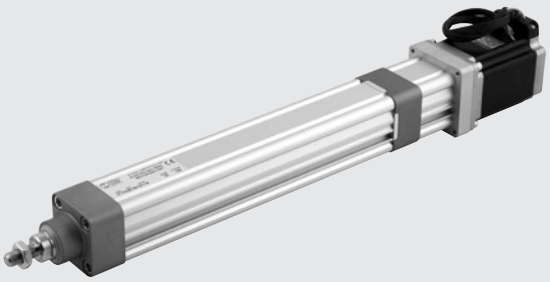
DRIVES AND ACCESSORIES

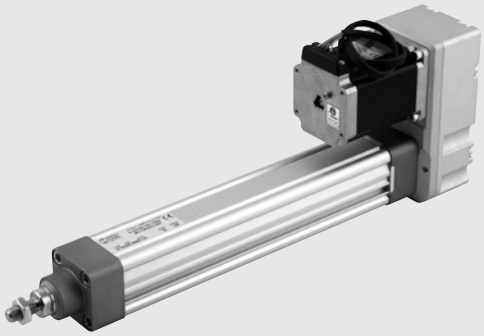
ELECTRIC CYLINDER
SERIES ELEKTRO ISO 15552

An electric cylinder with a connection interface in accordance with ISO 15552.
The piston rod extension is controlled by a system with a hardened screw and recirculating ball screw nut. The piston has a guide strip calibrated to reduce to a minimum play with the barrel and hence vibration during ball screw rotation.
The cylinder can be equipped with a built-in non-rotating system featuring two opposing slides that run in separate longitudinal slots in the barrel. The piston comes with magnets and the barrel has longitudinal slots for housing sensors. The piston rod has increased outside diameter and thickness to make it extra rigid and more resistant to radial and peak loads.
A system for greasing the screws is included. Numerous standard accessories for pneumatic cylinders, can be used for mounting the cylinder. Accessories made of aluminium, or made of steel for heavy-duty operations, can be used.
The motor can be selected from an optimised range, which encompasses both STEPPING and BRUSHLESS motors.
There is a version with a brake mounted on the motor.
Stepping motors are also available with a brake and encoder (all BRUSHLESS motors come with an encoder). It is important to remember that the brake is static type, so the motor must be stopped before the brake is engaged.
There is a version for in-line assembly, where the drive shaft is jointed directly onto the screw. There is also a geared motor version, where transmission is provided by pulleys and a cog belt with a transmission ratio of 1:1.
A planetary gearbox, in the case of a Ø 100 in-line cylinder, and pulleys with a non-unitary gear ratio, in the case of a Ø 80 and Ø 100 cylinder, can be used to increase the torque. Suitable motor drives are provided.
Special adaptor flanges and joints can be provided if the customer wishes to use a particular brand of motor.

in-line version



geared version



N.B.: A piston rod anti-rotation system must be used. If the piston rod is not fixed firmly to an element, a flange or to any other device preventing it from rotating, a cylinder in the anti-rotation version must be used.

TECHNICAL DATA		Ø 32	Ø 50	Ø 63 - 63 HD	Ø 80	Ø 100
Piston rod thread		M10x1.25	M16x1.5	M16x1.5	M20x1.5	
Environmental temperature range for STEPPING motors	°C	from -10 to +50				
BRUSHLESS motors	°C	from 0 to +40				
Electrical protection rating with STEPPING motors		IP20/IP40 or IP55 (see key to codes on page **A5**.32)			IP55	
BRUSHLESS motors		IP40 or IP65 (see key to codes on page **A5**.32)			IP65	
Maximum relative humidity of the air for IP55 STEPPING motor		90% with 40°C; 57% with 50°C (no condensate)				
IP65 BRUSHLESS motor		90% (no condensate)				
Minimum stroke for version with non-rotating		Twice the screw pitch (to guarantee ball lubrication)				
Minimum stroke for version without non-rotating	mm	80 (in order to re-grease the screw)			125 (in order to re-grease the screw)	
Maximum stroke	mm	1370	1500			
Positioning repeatability	mm	± 0.02				
Positioning accuracy	mm	± 0.2 **				
Overall radial oscillation of the piston rod (without load) for 100 mm of stroke	mm	0.4				
Versions		With or without piston rod non-rotating			With or without piston rod non-rotating; in line or geared motor; wth or without planetary gearbox	
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 5 mm)				
Sensor magnet		YES				
Maximum angle of twist of the piston rod for non-rotating version		1°30′	1°	0°45′	0°35′	0°30′
Work position		Any				

** indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc ...

N.B.: On request available with:
- piston rod in stainless steel (Ø32, Ø50 in AISI 316; Ø63, Ø63HD, Ø80, Ø100 in AISI 304), with limitations to the maximum stroke;
- head-sleeve fixing screws in AISI 316 stainless steel;
- lubrication grease compatible with the food industry, certified NSF Cat. H1 (accidental contact with food).

METAL WORK PNEUMATIC

MECHANICAL FEATURES		Ø 32		Ø 50			Ø 63			Ø 63 HD		Ø 80			Ø 100	
Screw pitch (p)	mm	4	12	5	10	16	5	10	20	5	10	5	10	32	10	40

J3 geared transmission	kgmm²	1041.7	1161.1	-	1041.7	1161.1	-

● in line with gearbox

The total mass moment of inertia (Jtot) reduced for the motor is: Jtot = [J1 · Stroke [m] + J2 · (Load [kg] + Mx [kg]) + J0] · τ^2 + J3
Mx is defined in the weight table.

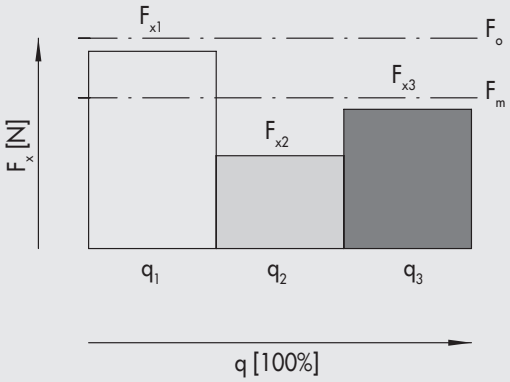
CALCULATION OF MEAN AXIAL LOAD F_m AND VERIFICATION

Peak axial load in a work cycle must not exceed the static axial load F_o. The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

Mean axial load F_m

$$F_m = \sqrt[3]{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

$$F_m = \sqrt[3]{F_{x1}^3 \times \frac{V_{x1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{x2}}{V_m} + \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{x3}}{V_m} \times \frac{q_3}{100} + \ldots}$$



F_x = Axial load at stage x
F_m = Mean axial load during extension
F_o = Static axial load
q = Time segment
V_x = Speed in the phase x
V_m = Average speed

The mean axial load must not exceed the dynamic axial load: $F_m \leq F$
The graphs on page **A5**.10 show screw life as a function of F_m

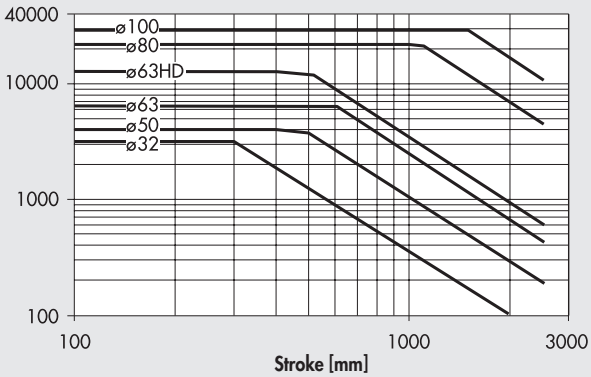
PEAK LOADS

The following load conditions applied to the piston rod must be met.

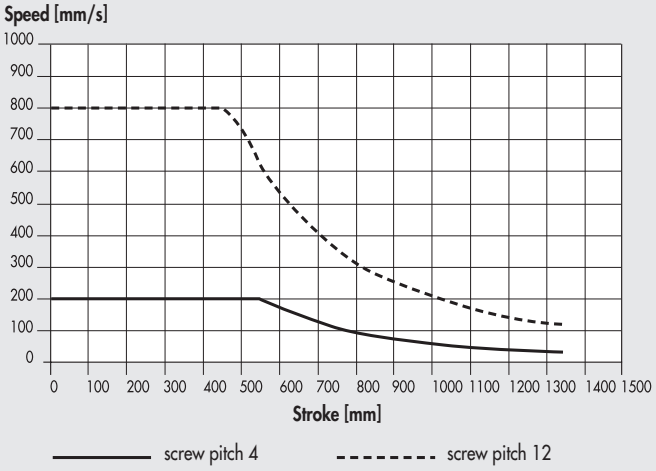
Axial load [N]



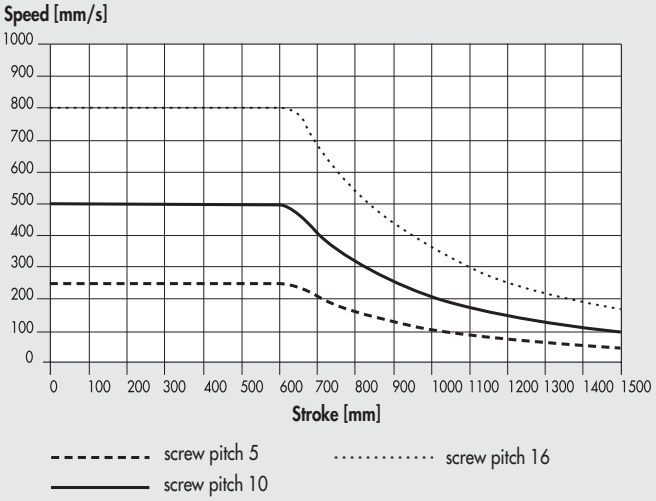
CRITICAL VELOCITY

The two variables (stroke and linear speed) must meet the conditions in the graph below, otherwise resonance could be generated and affect the system.

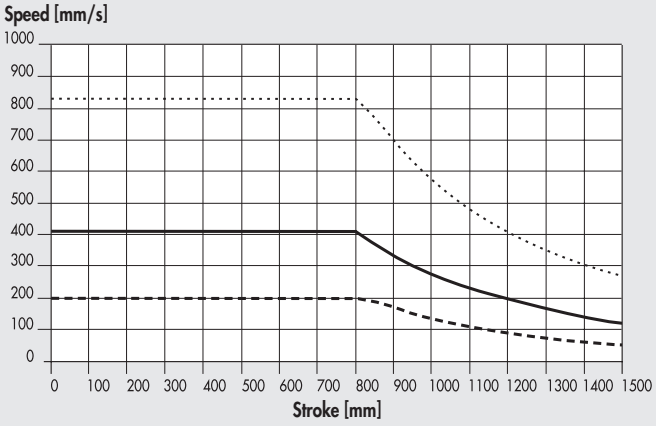
Ø 32



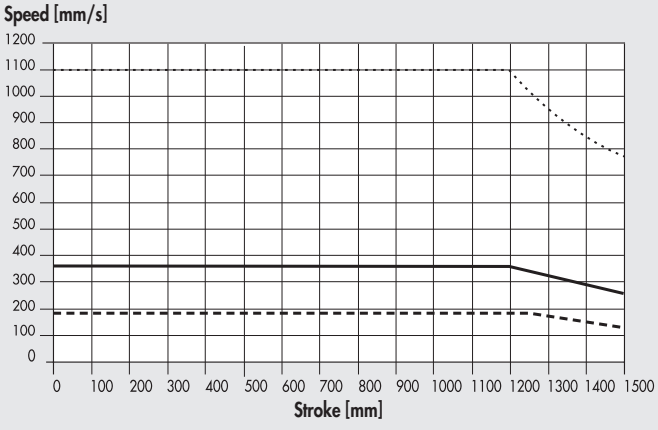
Ø 50



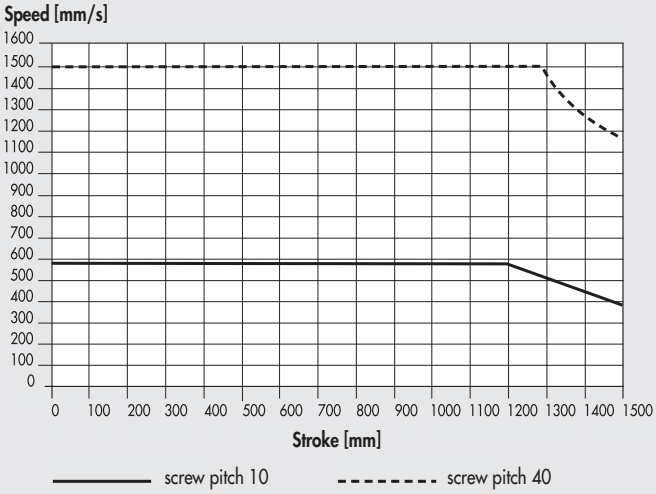
Ø 63 - Ø 63 HD



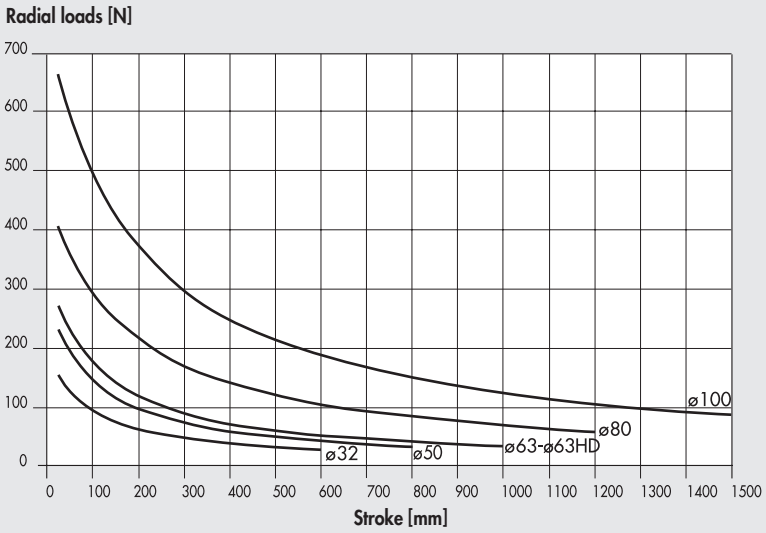
Ø 80



Ø 100



MAXIMUM RADIAL LOADS ON PISTON ROD



Radial loads can be applied to the piston rod.
They must not exceed the values in the adjacent chart, otherwise the guides on the rod and piston will be subjected to excessive wear.

PISTON ROD SPEED DEPENDING ON THE NUMBER OF SCREW TURNS

SCREW PITCH	TRANSMISSION RATIO	K (n/V)
4	1:1	15
5	1:1	12
	1:1.25	15
10	1:1	6
	1:1.25	7.5
	1:1.5	9
	1:2	12
	1:3	18
12	1:1	5
16	1:1	3.75
20	1:1	3
32	1:1	1.87
	1:1.5	2.81
40	1:1	1.5
	1:2	3
	1:3	4.5

The table shows the direct correspondence between the number of turns (1/min) and the translation speed of the stem (mm/s).
In any case all the other conditions and limitations of each specific cylinder will have to be complied.

Example:
V = 100 mm/s
pitch = 10
transmission ratio = 1:1.5
K = 9
n = V x K = 900 rpm

DRIVE TORQUE AS A FUNCTION OF THE AXIAL LOAD APPLIED TO THE PISTON ROD

SCREW PITCH	TRANSMISSION RATIO	h (C/F)
4	1:1	0.0008
5	1:1	0.0010
	1:1.25	0.0008
10	1:1	0.0020
	1:1.25	0.0016
	1:1.5	0.0013
	1:2	0.0010
	1:3	0.0007
12	1:1	0.0024
16	1:1	0.0032
20	1:1	0.0040
32	1:1	0.0064
	1:1.5	0.0043
40	1:1	0.0080
	1:2	0.0040
	1:3	0.0027

The friction generated in the mechanical system is taken into account.

Example:
F = 1000 N
pitch = 10
transmission ratio = 1:1.5
h = 0.0013
C = F x h = 1.3 Nm

LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD

Life characteristics can vary considerably from those indicated in the graphs due to different operating conditions (radial loads, temperature, lubrication status, etc.).

NOTES

AXIAL LOAD CURVES AS A FUNCTION OF SPEED (CYLINDER COMPELTE WITH MOTOR AND DRIVE)

N.B.: The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

- Maximum 37M2770000 or 37M4770000 (with brake) + 37D2600001 (3000W) geared version (1:2)
- Nominal 37M2770000 or 37M4770000 (with brake) + 37D2600001 (3000W) geared version (1:2)
- Maximum 37M2770000 or 37M4770000 (with brake) + 37D2600001 (3000W) in-line version (1:1)
- Nominal 37M2770000 or 37M4770000 (with brake) + 37D2600001 (3000W) in-line version (1:1)

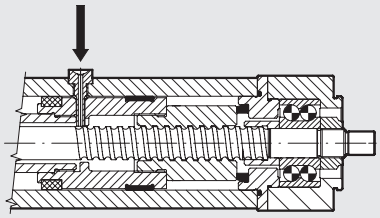
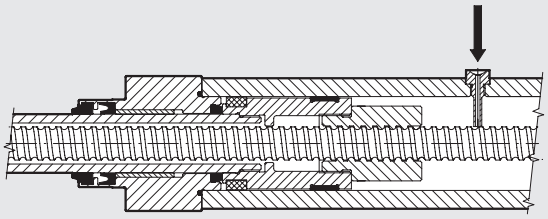
LUBRICATION DIAGRAMS

LUBRICATION OF VERSION WITH NON-ROTATING PISTON ROD



- Retract the piston rod towards the rear head. The piston rod/piston/ball screw system must rest against the buffer of the rear head.
- Unscrew the cap on the lubricator port (see note 1 in the drawing on **next page**).
- Screw the lubricating pin (see accessory on page **A5**.37) into the thread. Make sure you enter the corresponding hole in the piston below.
- Pump grease (code 9910506) using the suitable lubricator according to the quantity in table.
- Unscrew the lubricating pin and make the piston rod perform four complete strokes. The piston rod should end up in the initial (retracted) position.
- Repeat the last two operations.
- The operation of re-greasing will have to be repeated at least once a year.

LUBRICATION OF VERSION WITHOUT NON-ROTATING PISTON ROD



- Extend the piston rod completely. The piston rod/piston/ball screw system must rest against the buffer of the front head.
- Unscrew the cap on the lubricator port (see note 1 in the drawing on **next page**).
- Screw the lubricating pin (see accessory on page **A5**.37) into the thread. Make sure you enter the corresponding hole in the piston below.
- Pump grease (code 9910506) using the suitable lubricator according to the quantity in table.
- Unscrew the lubricating pin and make the piston rod perform four complete strokes. The piston rod should end up in the initial (extended) position.
- Repeat the last two operations.
- The operation of re-greasing will have to be repeated at least once a year.

N.B.: The Orderable configurations are shown on the next page.
◆ Only for Ø63 with screw pitch 5 or pitch 10
◀ Only for versions 3, 4, 7 and 8
● Version IP40 available for all STEPPING and BRUSHLESS motors, for only the sizes 32, 50 and 63, with the exception of motor code 37M5120000 which it is IP20;
■ Version IP55 available for STEPPING motors, for only the sizes 50, 63, 80 and 100 all the motors, with the exception of motor code 37M1470000; for Ø 32 only for motor code 37M1120001; version IP65 available for BRUSHLESS motors, BRUSHLESS with BRAKE and STEPPING with BRAKE + ENCODER motors (all sizes).
✱ On request available versions with gearbox with reduction ratios other than those eventually foreseen as standard.

N.B.: An piston rod anti-rotation system must be used. If the piston rod is not fixed firmly to an element, a flange or to any other device preventing it from rotating, a cylinder in the anti-rotation version must be used.

C_{OUT} = rated output torque N_{IN} = nominal input speed J = mass moment of inertia of the gearhead

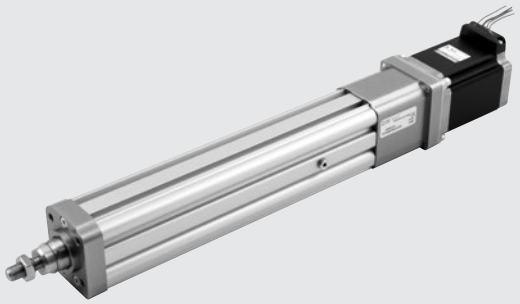
ELECTRIC MOTORS

For motor-drive couplings see table on page **A5**.31

NOTES

ELECTRIC CYLINDER
SERIES ELEKTRO ISO 15552 EK

An electric cylinder with a connection interface in accordance with ISO 15552.
The ELEKTRO ISO 15552 EK series stands out for some design choices that made it possible to reduce the length and cut costs, with a few different technical characteristics.
The piston rod moves forward by means of either a hardened and tempered screw and a ball recirculating screw nut or a trapezoidal screw (acme) and bronze bushing.
The cylinder comes with a built-in anti-rotation system obtained with two technopolymer pads that slide in the liner along two longitudinal groves.
The piston has a magnet and the liner has slots that accommodate magnetic sensors.
A greasing system is incorporated to lubricate the screw/ball screw nut.
Only a version with inline motor, which is shorter than the equivalent ELEKTRO ISO15552 cylinder, is provided. The version with geared motors is available on specific request.
A steel bracket to be fixed to the rear head, with an interface suitable for ISO 15552 cylinder accessories, is provided to be fixed to the cylinder from the rear side.
The cylinder can be supplied with a STEPPING or a BRUSHLESS motor, with or without parking brake.
Cylinders with a flange suitable for a motor brand that is most liked by the customer are available on request.



TECHNICAL DATA		Ø 32
Piston rod thread	mm	M10x1.25
Environmental temperature range for STEPPING motors	°C	from -10 to +50
BRUSHLESS motors	°C	from 0 to +40
Electrical protection rating with motors		IP40
Minimum stroke		Twice the screw pitch (to guarantee ball lubrication)
Maximum stroke	mm	500
Positioning repeatability	mm	± 0.02 with screw/ball screw nut; ± 0.15 with trapezoidal screw (acme)
Positioning accuracy	mm	± 0.2 **
Overall radial oscillation of the piston rod (without load) for 100 mm of stroke	mm	0.4
Versions		Ball screw; trapezoidal screw (acme) with bronze bushing
Anti-rotation of the piston rod		YES
Maximum angle of twist of the piston rod		1°30'
Motor layout		In line with piston rod axis
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 5 mm)
Sensor magnet		YES
Work position		Any

** indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc ...

MECHANICAL FEATURES		Ball screw		Trapezoidal screw (acme) with bronze bushing
Screw pitch (p)	mm	4	10	4
Screw diameter	mm	12	12	14
Static axial load (F_o)*	N	3000	3000	3000
Dynamic axial load (F)	N	5200	3160	see graph force/speed
		Calculate mean axial load and the calculate life (see graphs on page **A5**.43)		**N.B**: 40% duty cycle, i.e. the cylinder must work maximum 40% of time to allow the screw/ball screw nut to cool down.
Maximum number of revs	1/min	3000	3000	750
Maximum speed (V_{max})	mm/s	200	500	50
"K" ratio of motor revs and piston rod speed	n/V	15	6	15

Example: V = 100 mm/s; pitch = 10 → K=6 n= V x K = 100 x 6 = 600 rpm

* **N.B.:** Static loads bearable without damage. Payloads are shown in the diagrams on page **A5**.44 onwards.

WEIGHTS (ONLY CYLINDER)		Ball screw		Trapezoidal screw (acme) with bronze bushing
Screw pitch (p)	mm	4	10	4
Weight at stroke 0, without motor	g	610	620	720
Additional weight each mm of stroke	g	4.3	4.3	4.3
Moving mass at stroke 0 (Mx)	g	189.4	189.4	209.4
Additional moving mass each mm of stroke	g	1.3	1.3	1.3

N.B.: You get the total weight of a complete cylinder by adding: weight stroke 0 + stroke [mm] x weight for each mm of stroke + weight of the motor.

MASS MOMENTS OF INERTIA		Ball screw		Trapezoidal screw (acme) with bronze bushing
Screw pitch	mm	4	10	4
J0 at stroke 0	$kgmm^2$	9.9849	10.0979	10.2979
J1 each metre of stroke	$kgmm^2/m$	12.76	13.76	16.81
J2 each kg of load	$kgmm^2/kg$	0.4053	2.533	0.4053

The total mass moment of inertia (Jtot) reduced for the motor is: Jtot = J0 + J1 · stroke [m] + J2 · (load [kg] + Mx [kg])
Mx is defined in the weights table.

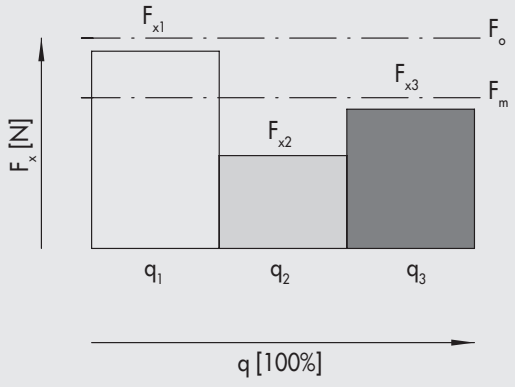
CALCULATION OF MEAN AXIAL LOAD F_m AND VERIFICATION

Peak axial load in a work cycle must not exceed the static axial load F_o.
The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

Mean axial load F_m

$$F_m = \sqrt[3]{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

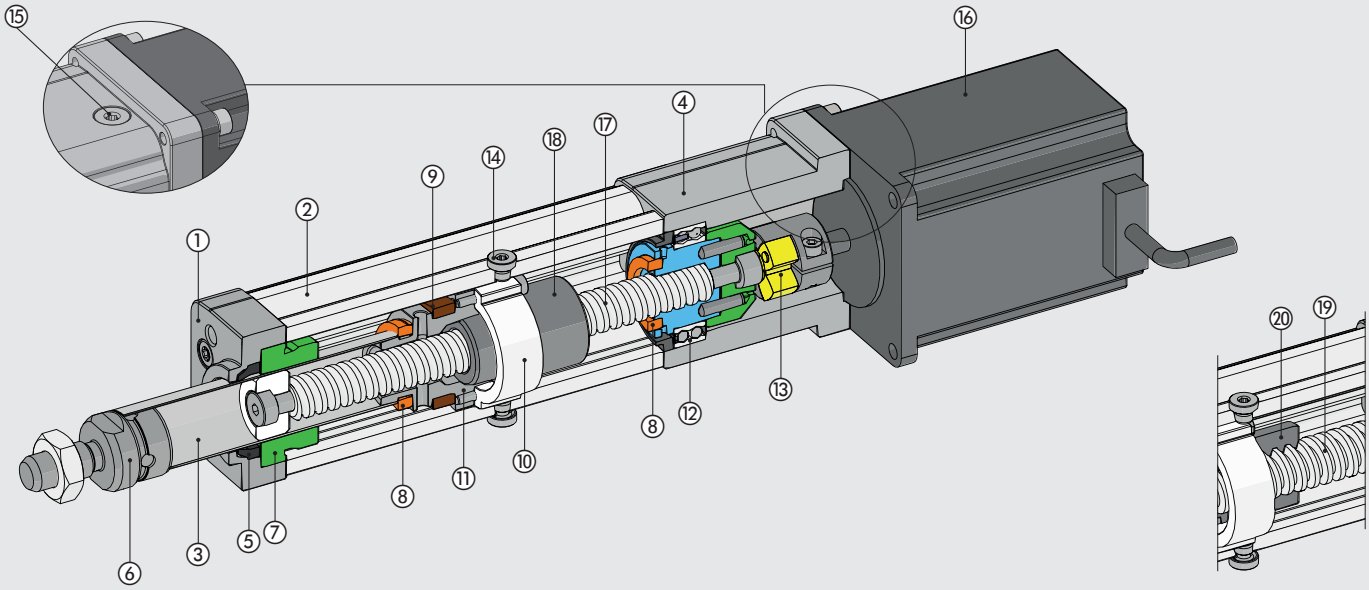
$$F_m = \sqrt[3]{F_{x1}^3 \times \frac{V_{x1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{x2}}{V_m} + \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{x3}}{V_m} \times \frac{q_3}{100} + \ldots}$$



F_x = Axial load at stage x
F_m = Mean axial load during extension
F_o = Static axial load
q = Time segment
V_x = Speed in the phase x
V_m = Average speed

The mean axial load must not exceed the dynamic axial load: $F_m \leq F$
The graphs on page **A5**.44 show screw life as a function of F_m

COMPONENTS

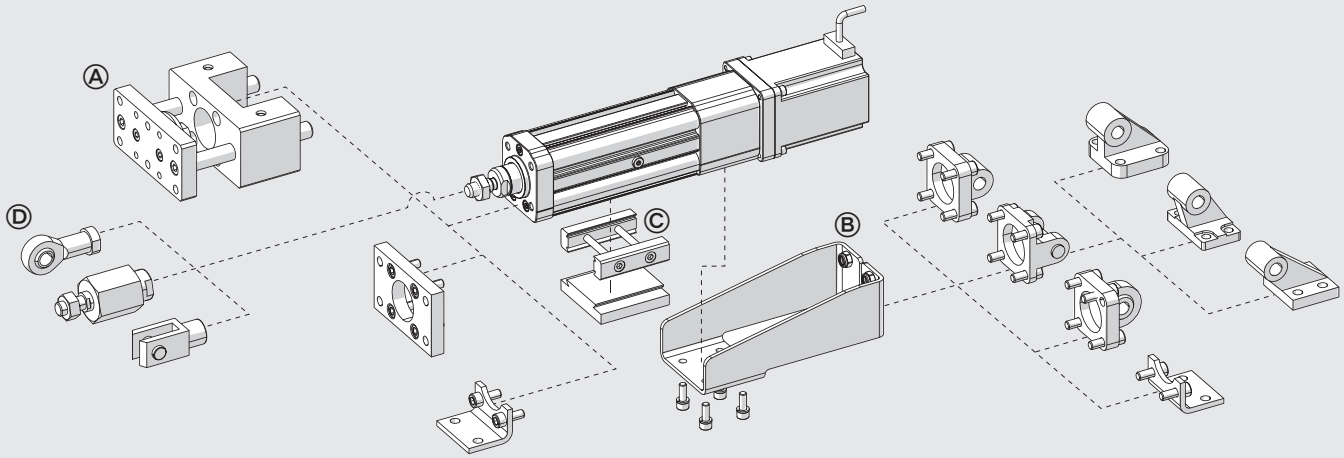


① FRONT CYLINDER HEAD: anodized aluminium
② BARREL: extruded and anodized aluminium alloy
③ PISTON ROD: stainless steel pipe
④ REAR CYLINDER HEAD: anodized aluminium
⑤ WIPER RING: polyurethane
⑥ NIPPLE: stainless steel
⑦ GUIDE BUSHING: technopolymer
⑧ BUFFER: polyurethane
⑨ MAGNET: plastoferrite
⑩ GUIDE AND ANTI-ROTATION RING: technopolymer
⑪ PISTON: aluminium
⑫ BEARING: oblique with two ball rings
⑬ ELASTIC COUPLING: aluminium / polyurethane
⑭ PLUG: remove it to insert the greaser
⑮ PLUG: for access to the elastic coupling screw
⑯ ELECTRIC MOTOR

Version with ball screw:
⑰ SCREW: hardened and rolled steel
⑱ NUT: ball recirculating

Version with trapezoidal screw (acme):
⑲ TRAPEZOIDAL SCREW (ACME): steel
⑳ NUT: bronze

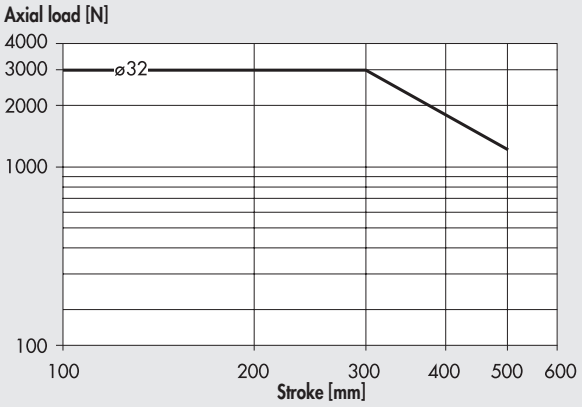
FIXING OPTIONS



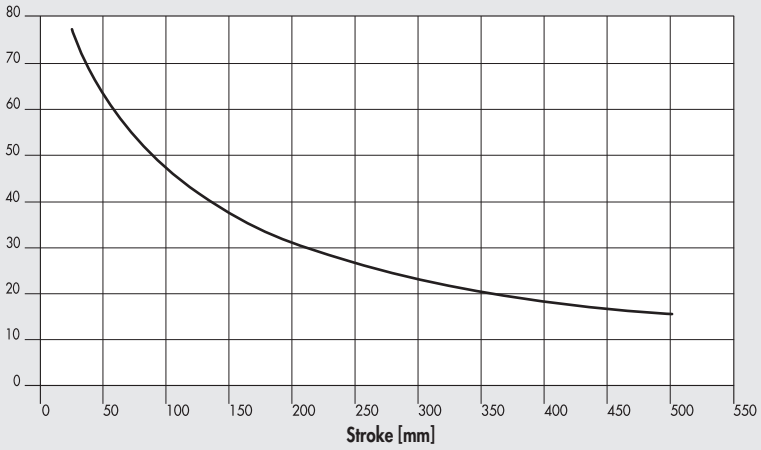
Ⓐ Fixing on the front head with 4 threaded holes according to ISO 15552 standard.
Ⓑ Fixing on the rear side, using the "rear fixing bracket". ISO 15552 accessories can be fitted onto this bracket.
Ⓒ Fixing on one side of the liner, using QS fixing elements. See page **A3**.15
Ⓓ Piston rod accessories.

PEAK LOADS

With vertical installations, the following load conditions applied to the piston rod must be met.



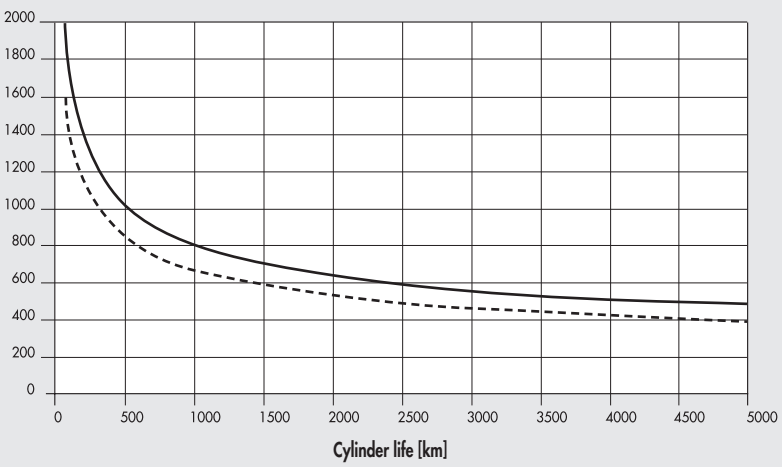
MAXIMUM RADIAL LOADS ON PISTON ROD



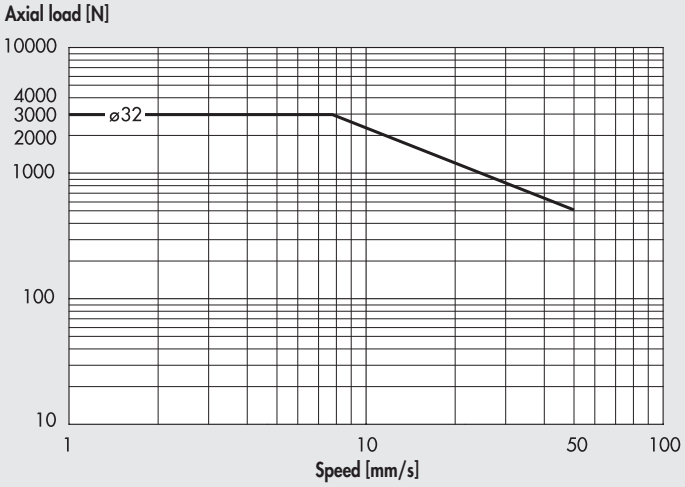
Radial loads can be applied to the piston rod.
They must not exceed the values in the adjacent chart, otherwise the guides on the rod and piston will be subjected to excessive wear.

LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD, BALL SCREW VERSION

Life characteristics can vary considerably from those indicated in the graphs due to different operating conditions (radial loads, temperature, lubrication status, etc.).



MAX. FORCE/SPEED CHART FOR VERSION WITH TRAPEZOIDAL SCREW (ACME) WITH BRONZE BUSHING

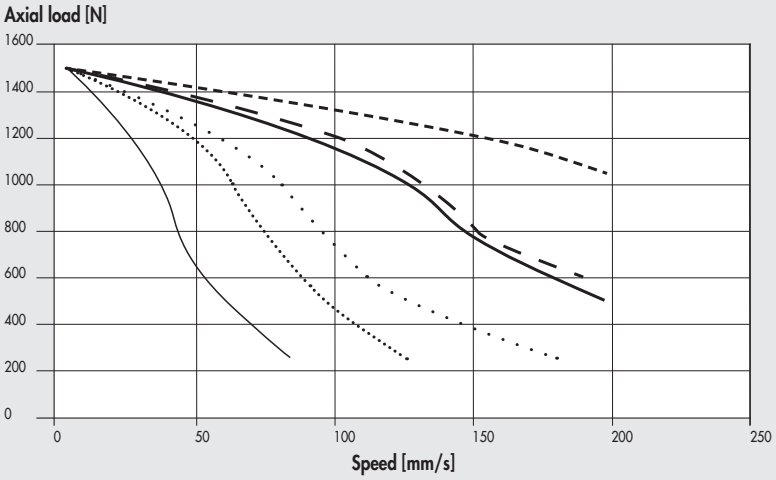


To prevent the bushing from excessive wear and tear, it is recommended to work below the curve indicated.

AXIAL LOAD CURVES AS A FUNCTION OF SPEED (CYLINDER COMPLETE WITH MOTOR AND DRIVE)

N.B.: The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

Ø 32 with pitch 4 ball screw, STEPPING motor and STEPPING motor with brake



- 37M5120000 (with brake, 24VDC)

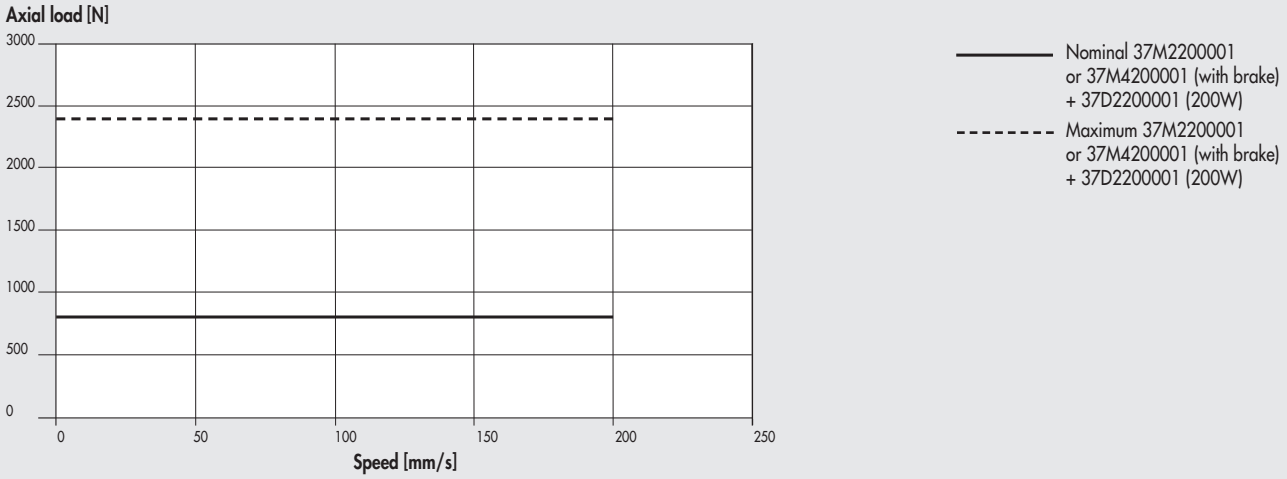
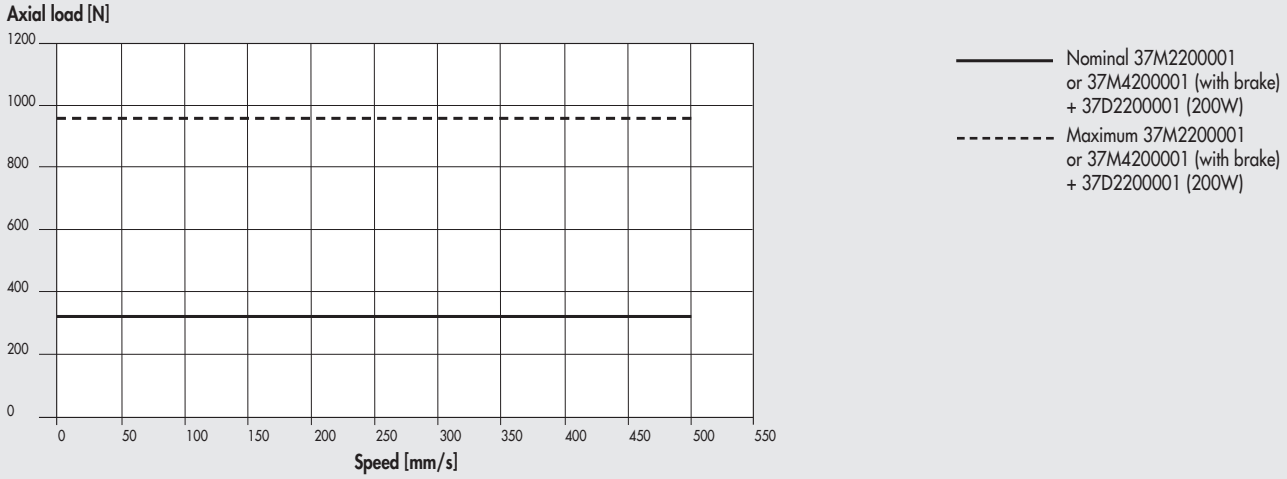
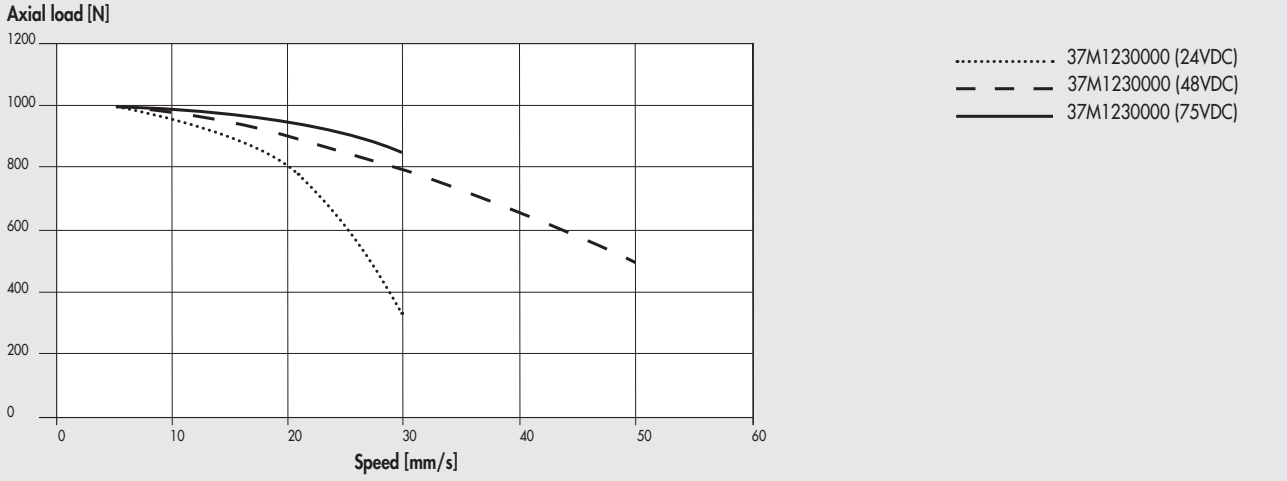
Ø 32 with pitch 4 ball screw, BRUSHLESS motor and BRUSHLESS motor with brake



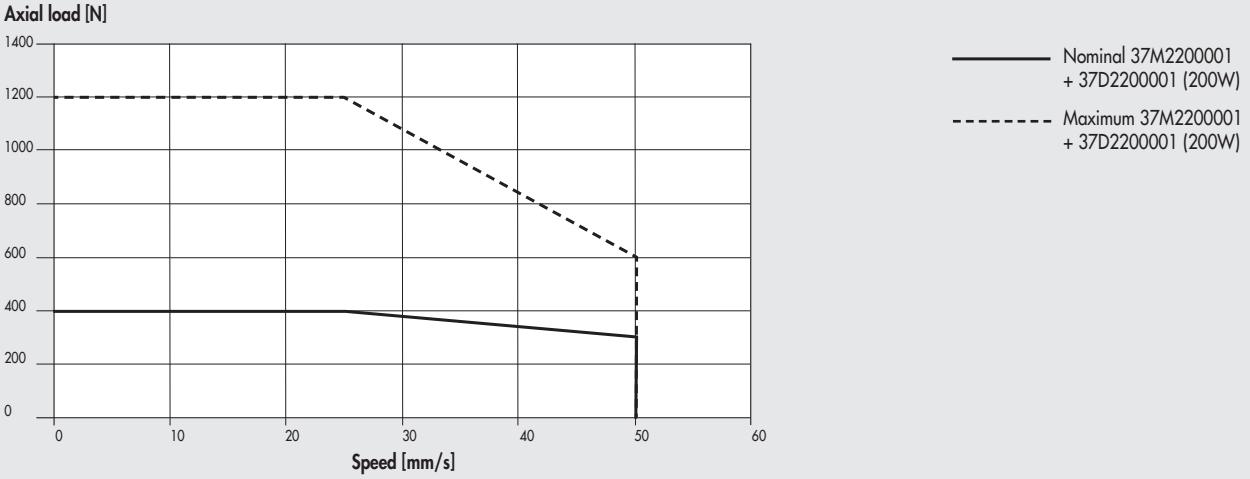
Ø 32 with pitch 10 ball screw, BRUSHLESS motor and BRUSHLESS motor with brake



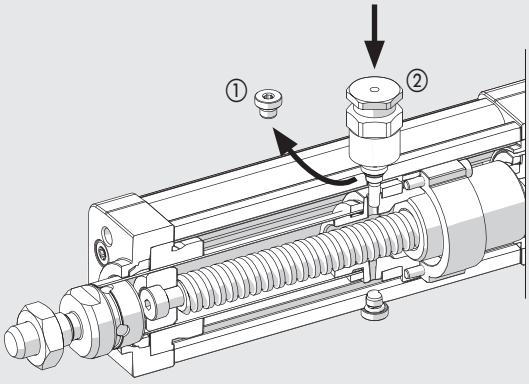
Ø 32 with pitch 4 trapezoidal screw (acme), STEPPING motor



Ø 32 with pitch 4 trapezoidal screw (acme), BRUSHLESS motor



LUBRICATION DIAGRAMS



- Retract the piston rod towards the rear head. The piston rod/piston/ball screw system must rest against the buffer of the rear head.
- Unscrew the cap ① on the lubricator port.
- Screw the lubricating pin ② (code 0950327108) into the thread. Make sure you enter the corresponding hole in the piston below.
- Pump grease (code 9910506) using the suitable lubricator according to the quantity in table.
- Unscrew the lubricating pin and make the piston rod perform four complete strokes. The piston rod should end up in the initial (retracted) position.
- Repeat the last two operations.
- The operation of re-greasing will have to be repeated at least once a year.

		Ø 32	
Screw pitch (p)	mm	4	10
Relube grease quantity	g	0.3	0.5
	cc	0.26	0.42

N.B.: These are indicative values that can change as a function of the stroke

NOTES

NOTES

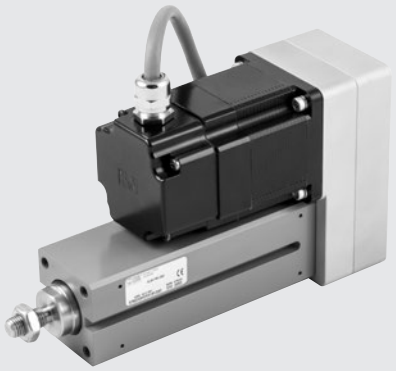
ELECTRIC CYLINDER SERIES ELEKTRO SSC

An electric cylinder with a connection interface in accordance with ISO 15552.
The ELEKTRO SSC series differs from the ISO 15552 ELEKTRO series in some design choices, including the absence of the front and rear heads.
The cylinder is available with two defined strokes, 30 mm and 55 mm respectively.
The piston rod moves forwards by either the hardened and tempered steel screw and a ball recirculating screw nut or a steel screw and technopolymer lead nut.
The cylinder is equipped with an anti-rotation system that can be easily removed as required.
A magnet is fitted to the piston rod to provide a limit switch signal and two separate lengthwise slots are provided on the cylinder body to accommodate the Square-type sensors.
An easily removable plate is attached to the cylinder body to facilitate re-lubrication of the screw.
The cylinder is available in either in-line or geared version.
The motor can be selected from among an optimized range, which includes both STEPPING and BRUSHLESS motors.
The most suitable drives for the motors are also provided.
Special flanges and couplings are provided on request when motors of a make or model other than those specified in the catalogue are used.

N.B: It is essential for the piston rod to be provided with an anti-rotation system. Therefore, if the piston rod is not secured firmly to a flange or a similar element that prevents rotation, the anti-rotation version of the cylinder must be chosen

in-line version

geared version



TECHNICAL DATA		Ø 32
Piston rod thread	mm	M10x1.25
Environmental temperature range for STEPPING motors	°C	from -10 to +50
BRUSHLESS motors	°C	from 0 to +40
Electrical protection rating with STEPPING motors		IP55 or IP65 (see key to codes on page **A5**.63)
BRUSHLESS motors		IP65 (see key to codes on page **A5**.63)
Maximum relative humidity of the air for IP55 STEPPING motor		90% with 40°C; 57% with 50°C (no condensate)
IP65 BRUSHLESS motor		90% (no condensate)
Standard strokes (including 5 mm extra-stroke) for homing	mm	30
	mm	55
Positioning repeatability	mm	±0.02 with ball screw
		±0.15 with lead screw
Positioning accuracy	mm	±0.2 * with screw/ball screw nut
		±0.4 * with lead screw
Overall radial oscillation of the piston rod (without load) for 55 mm of stroke	mm	0.10
Versions		Ball screw;
		Lead screw
		With or without piston rod non-rotating
		In line or geared motor
Anti-rotation of the piston rod		YES (depending on the choice)
Uncontrolled impact at the end of stroke		NOT ALLOWED (for rear buffer ONLY)
Sensor magnet		YES
Maximum angle of twist of the piston rod for non-rotating version		0°30'
Work position		Any

* Indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc ...

MECHANICAL FEATURES		Ball screw		Lead screw	
Screw pitch (p)	mm	4	10	5	12.7
Screw diameter	mm	12	12	12	12.7
Static axial load (F_o)*	N	3000	3000	995	1155
Dynamic axial load (F)	N	5200	3160	600	300
		Calculate mean axial load and the calculate life (see graphs on page **A5**.56-57)			
				N.B: 25% duty cycle, i.e. the cylinder must work maximum 25% of time to allow the screw/ball screw nut to cool down.	
Maximum number of revs	1/min	3000	3000	600	940
Maximum speed (V_{max})	mm/s	200	500	50	200
"K" ratio of motor revs and piston rod speed	n/V	15	6	12	4.7

Example: V = 100 mm/s; pitch = 10 → K = 6 n = V x K = 100 x 6 = 600 rpm

* **N.B.:** Static loads bearable without damage. Payloads are shown in the diagrams on page **A5**.57 onwards

WEIGHTS		Ball screw		Lead screw	
Screw pitch (p)	mm	4	10	5	12.7
Weight at stroke 0, in-line version	g	767	777	577	582
Weight at stroke 0, geared version	g	1077	1087	927	932
Additional weight each mm of stroke	g	7.6	7.6	7.6	7.6
Moving mass at stroke 0 (non-rotating version) Mx	g	199	209	140	145
Additional moving mass each mm of stroke	g	2.5	2.5	2.5	2.5

N.B.: You get the total weight of a complete cylinder by adding: weight stroke 0 + stroke [mm] x weight for each mm of stroke + weight of the motor.

MASS MOMENTS OF INERTIA		Ball screw		Lead screw	
Screw pitch	mm	4	10	5	12.7
Transmission ratio (τ)		1:1	1:1	1:1	1:1
J0 at stroke 0	$kgmm^2$	7.821	7.934	5.708	6.123
J1 each metre of stroke	$kgmm^2/m$	12.76	13.76	11.6	14.7
J2 each kg of load	$kgmm^2/kg$	0.4053	2.5330	0.6333	4.0855
J3 in-line transmission	$kgmm^2$	2.879	2.879	2.879	2.879
J3 geared transmission	$kgmm^2$	3.237	3.237	3.237	3.237

The total mass moment of inertia (Jtot) reduced for the motor is: Jtot = [J1 . stroke [m] + J2 . (load [kg] + Mx [kg]) + J0] . τ2 +J3
Mx is defined in the weights table.

CALCULATION OF MEAN AXIAL LOAD F_m AND VERIFICATION

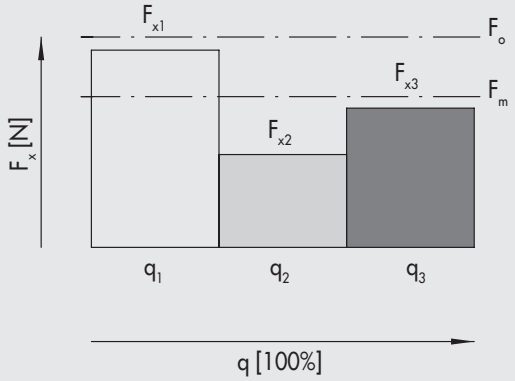
Peak axial load in a work cycle must not exceed the static axial load F_o.
The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

Mean axial load F_m

$$F_m = \sqrt[3]{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

$$F_m = \sqrt[3]{F_{x1}^3 \times \frac{V_{X1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{X2}}{V_m} + \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{X3}}{V_m} \times \frac{q_3}{100} + \ldots}$$

F_x = Axial load at stage x
F_m = Mean axial load during extension
F_o = Static axial load
q = Time segment
V_x = Speed in the phase x
V_m = Average speed

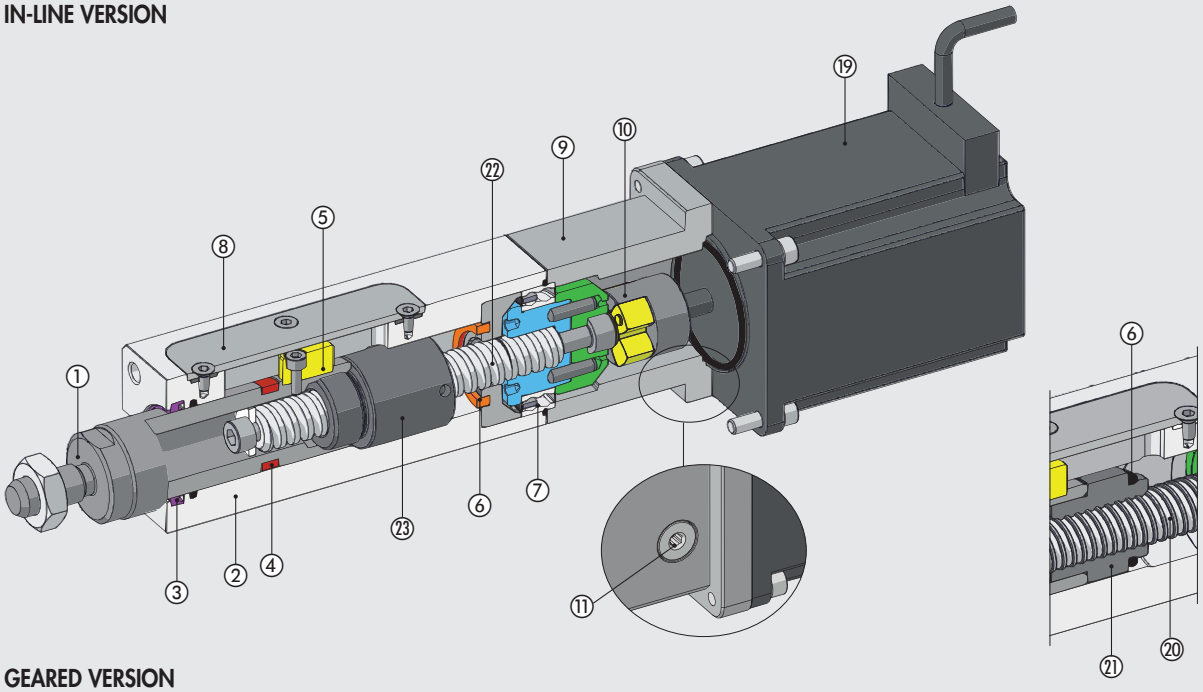


The mean axial load must not exceed the dynamic axial load: $F_m \leq F$
The graphs on page **A5**.56-57, show screw life as a function of F_m

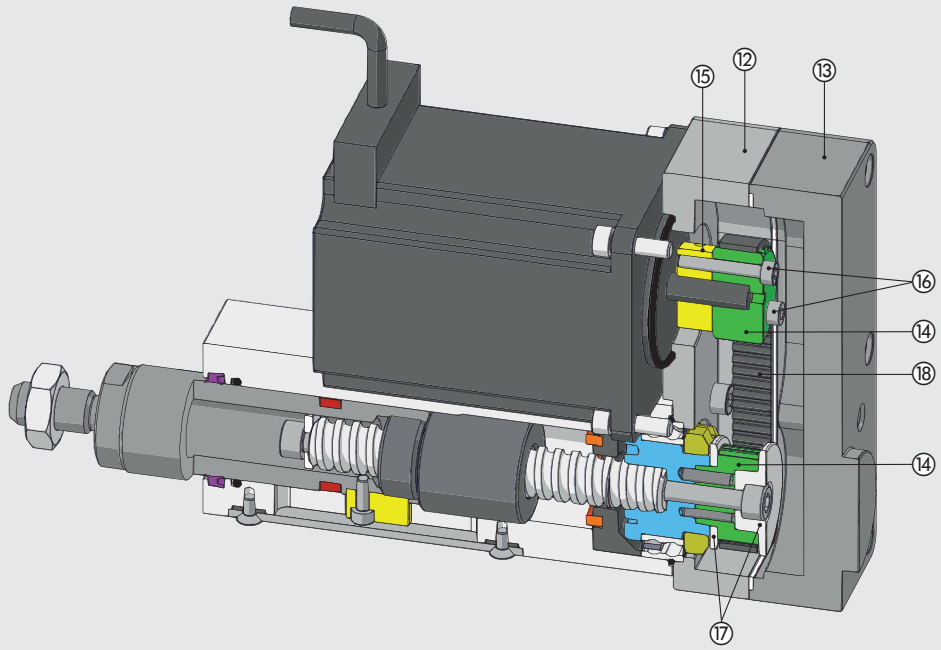
METAL WORK PNEUMATIC

COMPONENTS

IN-LINE VERSION



GEARED VERSION

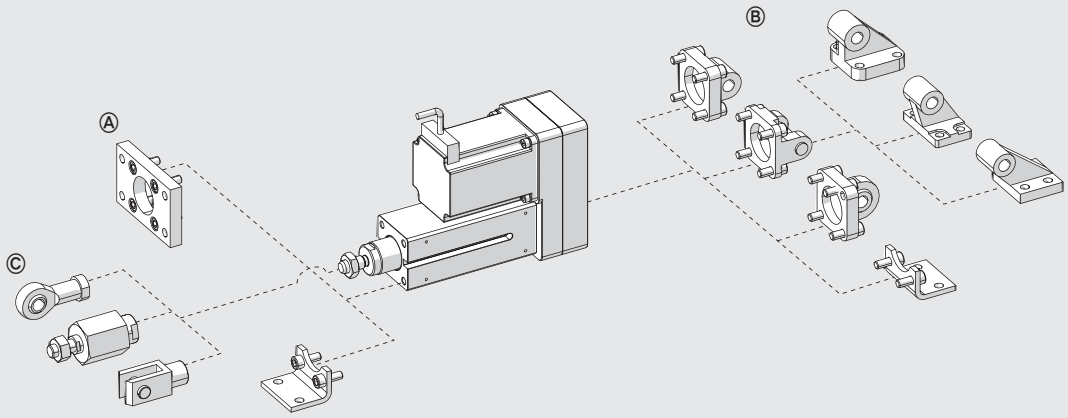


① PISTON ROD: stainless steel (AISI 316)
② BODY: aluminium alloy with wear-resistant coating
③ WIPER RING: polyurethane
④ MAGNET: plastoferrite (optional)
⑤ ANTI-ROTATION KEY: brass (optional)
⑥ BUFFER: polyurethane
⑦ BEARING: oblique with two ball rings
⑧ PLATE: stainless steel (AISI 304)
⑨ ADAPTOR PLATE: anodized aluminium
⑩ ELASTIC COUPLING: aluminium / polyurethane
⑪ PLUG: for access to the elastic coupling screw
⑫ TRANSMISSION PLATE: anodized aluminium
⑬ COVER: anodized aluminium
⑭ COG PULLEY: anodized aluminium
⑮ ELASTIC COLLAR: anodized aluminium
⑯ ELASTIC COLLAR-LOCKING SCREWS: zinc-plated steel
⑰ BELT FLANGES: anodized aluminium
⑱ TOOTHED BELT: polyurethane with steel cables
⑲ MOTOR

Version with lead screw:
⑳ SCREW: stainless steel (AISI 304)
㉑ NUT: technopolymer

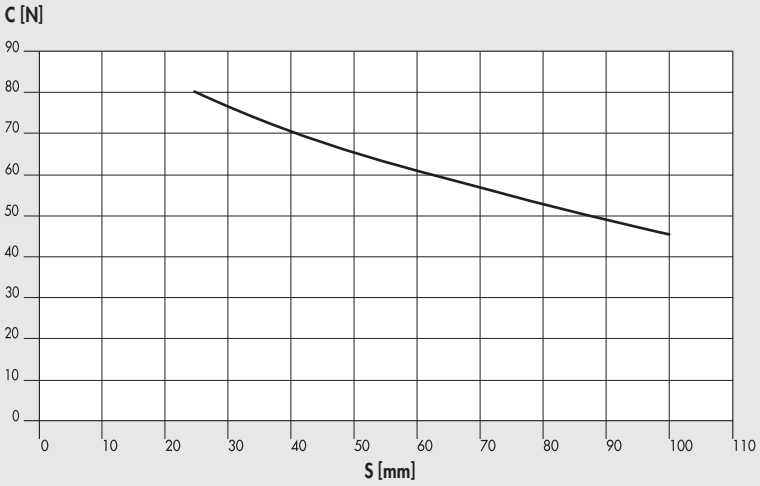
Version with ball screw:
㉒ SCREW: hardened and rolled steel
㉓ NUT: ball recirculating

FIXING OPTIONS

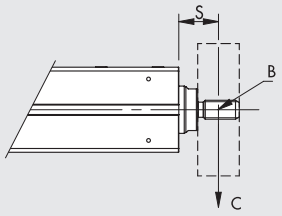


Ⓐ Fitted directly to the front of the cylinder body, using 4 threaded holes according to ISO 15552
Ⓑ Fitted to the rear (geared version only), using 4 threaded holes according to ISO 15552
Ⓒ Piston rod accessories.

MAXIMUM RADIAL LOADS ON PISTON ROD



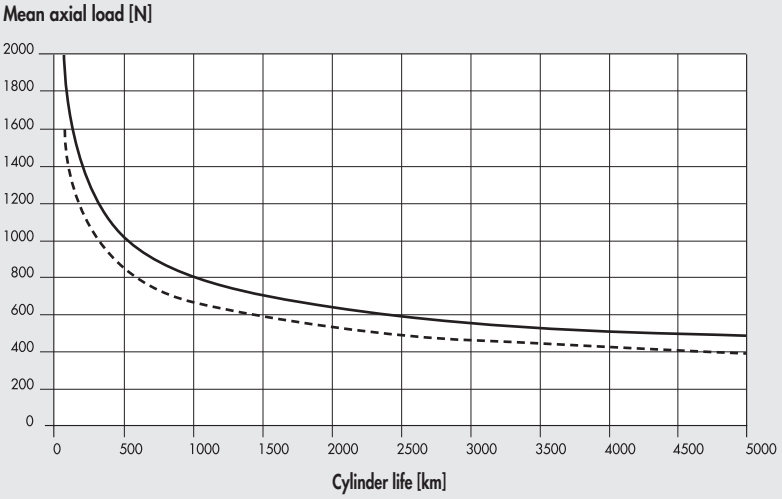
Radial loads can be applied to the piston rod.
They must not exceed the values in the adjacent chart, otherwise the guides on the rod and piston will be subjected to excessive wear.

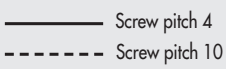


B = Barycentre;
S = Projection;
C = Radial load

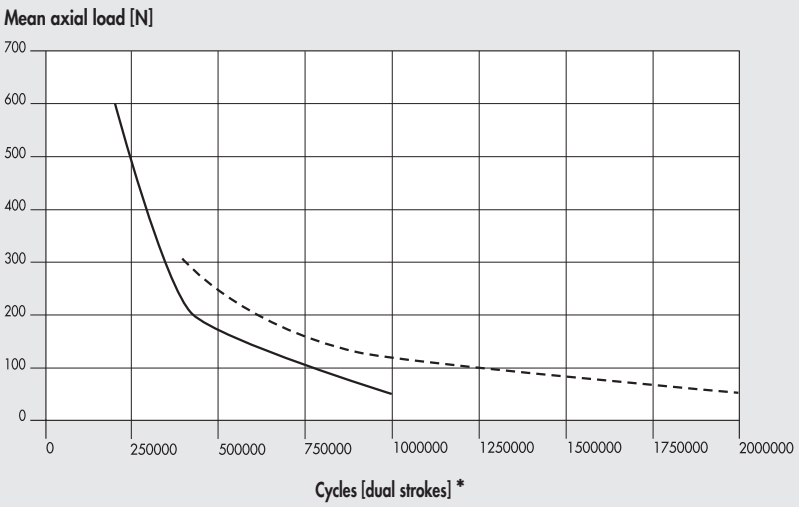
LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD, VERSION WITH BALL SCREW

Life characteristics can vary considerably from those indicated in the graphs due to different operating conditions (radial loads, temperature, lubrication status, etc.).





LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD, VERSION WITH LEAD SCREW



* Relative to cylinders stroke 55 mm. For 30 mm stroke cylinders, the data must be multiplied by 1.8

AXIAL LOAD CURVES AS A FUNCTION OF SPEED (CYLINDER COMPLETE WITH MOTOR AND DRIVE)

N.B.: The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

Ø 32 with pitch 4 ball screw, STEPPING motor, STEPPING motors with encoder, STEPPING motors with encoder + brake

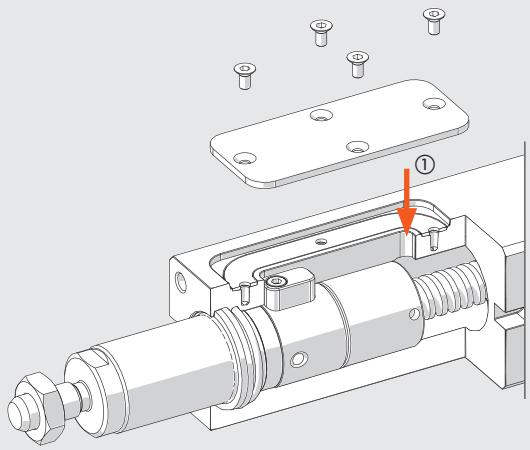
LUBRICATION DIAGRAMS



① Greasing point

- Retract the piston rod towards the motor adapter plate until the piston rod/ball scroll system rests against the rear buffer.
- Move the piston rod at low speed and/or controlled torque forwards by a value corresponding to the cylinder total stroke.
- Remove the plate by unscrewing the 4 screws.
- Lubricate the screw using a food-grade grease pump (code 9910514), according to the quantities shown in the table.
- Make the piston rod perform four complete strokes. The piston rod should end up in the initial (retracted) position.
- Repeat the last two operations
- Refit the plate by tightening the 4 screws.
- The operation of re-greasing will have to be repeated at least once a year.

		Ø 32

NOTES

NOTES

ELECTRIC CYLINDER
SERIES ELEKTRO ROUND DC

In the ELEKTRO ROUND DC cylinder, the forward movement of the piston rod is obtained via trapezoidal (acme) or lead screw and a self-lubricating technopolymer nut. This piston has a guide ring that is calibrated to minimize the backlash with the cylinder liner and reduce vibration during rotation of the screw. The piston also comes with a magnet for magnetic sensors.
The system is driven by a 24VDC direct current motor. The position of the motor can be controlled using an optional encoder. A resettable fuse is inserted in the cylinder for motor thermal overload protection. The motor used has a planetary gearbox with a 1/13 or 1/25 ratio.
Depending on the configuration (screw pitch and gear ratio), this cylinder can be either irreversible (supporting the load with the motor off) or reversible under load.
Both versions are supplied without piston rod anti-rotation device, which will be provided by the customer outside the cylinder.
It is available in two versions:
- with an in-line motor, where the motor shaft is connected directly to the screw via a coupling.
- with a geared motor, where the transmission of motion is ensured by belt and pulleys with a ratio of 1:1.

This cylinder is designed for use with IP65 protection rating.
The solutions with the trapezoidal screw (acme) are generally suitable for applications where the number of operations per time unit is reduced; the degree of accuracy is not particularly high due to heating of the screw-leadscrew assembly; wear over time does not create inconveniences, no high forces and speeds are required at the same time.

in-line version

geared version

TECHNICAL DATA			Ø 32 pitch 4	Ø 32 pitch 25

NOTES

ELECTRIC AXIS
SERIES ELEKTRO SHAK

Belt-driven rodless electric cylinder with V-Lock type interface.
The cylinder structure features a sturdy anodized aluminium extruded profile to ensure optimal rigidity. The typical V-Lock dovetail (no grooves) is provided for easy installation using QS elements. The V-Lock interface with a dovetail and standard grooves is mounted on the moving plate to fix the other components using K or QS elements. The slide is moved by means of adjustable casters running along hardened and tempered guides inserted into the extruded profile, to obtain a rigid system with adjustable clearance. Guide lubrication nipples are also mounted on the slide plate. The slide is driven by a reinforced belt that is in turn operated by a pulley keyed onto the motor; a mechanical belt-tensioning system is mounted on the cylinder.
Different drives are available, both brushless and stepping. The versions with a brushless motor can be equipped with a 1:3 speed gearbox, when you want to make the most of the available torque.
In addition to the standard drives included in the catalogue, custom cylinder can also mount other types of motor. The homing position is identified by a inductive sensor included in the supply.
Two different size are available, SHAK 340 and SHAK 470, with pre-set standard strokes. For each size it is possible to choose side on which to mount the motor (4 positions). A version with a smooth tree-type output, mounted in a pre-set position, is also available. The SHAK cylinder can be mounted both horizontally and vertically. With vertical installation, it is advisable to use motors with a holding brake that only activates in the event of a power failure but not when there is a motor overload. For the correct operation of the brake, it is necessary to meet the limits required by the axial load curves according to the speed. Among the accessories available there is a cable guiding system with a handy cable channel and bracket.

AXIAL LOAD-SPEED CURVES

N.B.: Check that the following constraints are met for each cycle phase:
- the maximum movable masses and related acceleration values specified in the data sheets;
- the values specified in the force and moment calculation diagram (including moment of inertia).

The following diagrams show the axial load with changing speed (mm/s). Each diagram shows two separate curves:
- **NOMINAL AXIAL LOAD** curve: the nominal axial load delivered by the motor with a duty cycle of 100%
- **MAXIMUM AXIAL LOAD** curve: the axial load delivered by the motor with a duty cycle of less than 100%.

SHAK 340

NOTES

METAL WORK PNEUMATIC

NOTES

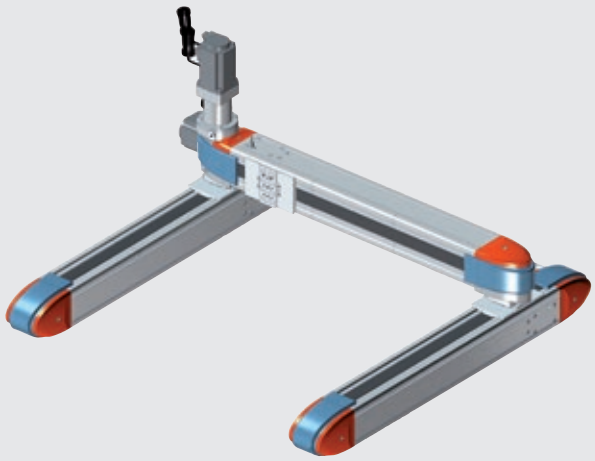
ELECTRIC AXIS
SERIES ELEKTRO SHAK GANTRY

The gantry consists of two parallel belt-driven axes, of which one acts as drive axis (drive X-axis) and the other as driven axis (geared X-axis). Both axes are connected one to the other by means of an anodized aluminium shaft and two flexible couplings that compensate for any minor misalignments between the axes caused by the support base. The shape of both coupling and drive shaft is designed to facilitate disassembly.
The carriages of the drive axis and the driven axis (both with a V-Lock interface featuring a typical shape and grooves) move synchronously thanks to the drive shaft. On the extruded body of both axes, on the side opposite to the carriages, the typical (no grooves) V-Lock dovetail is provided for easy fixing to the support to the support structure using QS elements. On the carriages of the X-axes another SHAK electric axis (Y-axis) is mounted transversally.
The motion is the same as for the single axis and has the same advantages: rigid structure, movement of the carriage with adjustable clearance, the presence of guide lubrication nozzles, the possibility of adjusting belt tensioning.
A BRUSHLESS motor with a 1:5 speed gearbox has been adopted as it ensures optimal load capacity without sacrificing the dynamic and speed performance typical of this product.



In addition to the standard drives proposed in the catalogue, the cylinder can be customised with the installation of other motors.
The homing position is identified by an inductive proximity sensor included in the supply.
Two sizes are available, SHAK-GANTRY 340 and SHAK-GANTRY 470, with standard pre-set strokes. For each size, it is also possible to choose on which side to mount the motors (right- or left-hand).
The Elektro SHAK-GANTRY was designed and optimized for horizontal installation. On request, the motors can be supplied with a holding brake, which activates only in the event of a power failure but not when there is a motor overload. For correct operation of the brake, it is important to comply with the limits required by the axial load curves according to speed. Among the accessories available there is a cable-guiding system with a handy cable channel and bracket (in the version with motors on the left-hand side).

	2000 - 2200		1.20
	2400 - 600	2.00	0.55
	2400 - 1000		0.75
	2400 - 1400		0.90
	2400 - 1800		1.00
	2400 - 2200		1.20

N.B.: Maximum moving mass 25 kg

Traverse times relate to operation with motors supplied by Metal Work, using max. 200% of the rated torque.

EXAMPLE:
Average traverse times with SHAK GANTRY 340, 800-1200.
The following can be obtained from the tables: tX = 0.7 and tY = 0.80

ELECTRIC MOTORS

For motor-drive couplings see table on page **A5**.102

ELECTRIC CANTILEVER AXIS

ELECTRIC AXIS
BELT-DRIVEN RODLESS, SERIES ELEKTRO VBK

Belt-driven rodless electric axis with load-bearing structure consisting of an anodized aluminum extruded profile and linear guide system comprising a rail and ball-recirculation pads.
The motor and gearbox unit is fixed to the central body (so-called "cantilever" solution).
The typical application foresees that the central body remains fixed and the extruded profile moves.
The VBK can be mounted in both horizontal and vertical orientations; for example can be used as a Z axis in a cartesian portal, typically with a BK Series Gantry.
Motion transmission is obtained by means of a polyurethane toothed belt reinforced with steel cables.
The parabolic profile of the belt tooth ensures high efficiency, reduced noise and vibrations.
The central body houses the transmission group consisting of a driving pulley and two idle rollers ("omega" configuration).
The axis, which can be ordered with a stroke per mm, comes complete with an adjustable belt-tensioning system and independent channels for pad re-lubrication.
Threaded and centering holes are present on the central body and on the heads allowing multiple mounting options.
The extrusion has the characteristic V-Lock profile as well as an internal opening where to pass cables and pipes.
It is possible to purchase the axis with or without drive. The standard drive includes a brushless motor with brake, combined with a precision planetary gearbox available in two different gear ratios.
The motor unit can be mounted on either side of the central body.

TECHNICAL DATA		
Admissible ambient temperature	°C	from 0 to +40
Maximum relative humidity		90% at 40°C; 57% at 50°C (no condensate)
Maximum duty cycle		100%
Minimum stroke	mm	110
Maximum stroke	mm	1000
Repeatability	mm	± 0.05
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 10 mm)
Homing position sensor		Inductive sensors
Work position		Any
Degree of protection		IP 20
Noise level	dBA	<66
Type belt		RPP 5 mm pitch in polyurethane with steel tensioning cables
Maximum belt extension		0.10%
Pulley feed/revolution	mm	110
Driving pulley pitch diameter	mm	35.01
Maximum axial force ■	N	550
Maximum number of revs	1/min	1000
Maximum speed (without load)	m/s	3
Maximum acceleration (without load)	m/s^2	30
Maximum driving torque applicable to the pulley	Nm	10
Maximum applicable motor shaft diameter ▲	mm	14

■ Maximum load admissible on the belt: for the sizing, perform the checks as shown in the following pages.
▲ Compact configuration with the motor shaft partially inserted into the pulley axle.

METAL WORK PNEUMATIC

MASS AND MOMENT OF INERTIA

Mass of carriage	kg	2.08
Moving mass at stroke 0 (Mx)	kg	1.46
Moving mass at stroke 0 (excluding drive)	kg	3.54
Moving mass of brushless motor with brake + gearbox + flange and screws	kg	3.18
Moving mass for each mm of stroke	g/mm	3.6
J_0 at stroke 0	kgmm^2	610
J_1 each metre of stroke	kgmm	1.1
J_2 each kg of load	mm^2	306.5
J_3 gearboxe 1:3	kgmm^2	8
J_3 gearboxe 1:5	kgmm^2	6

The reduced moment of inertia of total mass at the driving shaft is: $J_{tot} = [J_1 \cdot \text{Stroke [mm]} + J_2 \cdot \text{Load [kg]} + J_0] \cdot \tau^2 + J_3$

$\tau = 1/u$

u = Gearing ratio

$J_3 = J_{\text{gear ratio}}$

In order to ensure the proper functioning of the system and avoid instability, it is necessary to limit the ratio K between the reduced moment of inertia at the motor shaft $\mathbf{J_{total}}$ and the moment of inertia at the motor $\mathbf{J_{motor}}$

$1<K= J_{total} / J_{motor} <40$

These figures apply to motors supplied by Metal Work. Motors of other makes could require different maximum values.
This limit also depends on the level of control of the required movement: e.g. if the movements need to be coordinated, the ratio between the inertias must be considerably reduced.
Indicatively, it is **advisable NOT to exceed** the following values:

1<K<10 with motors BRUSHLESS

It is worth noting that system operation can be enhanced by varying the drive parameters.
For BRUSHLESS motors supplied by Metal Work, a "tuning" procedure is envisaged to optimise motor operation depending on the mechanics applied to the axle.

MOMENTS OF INERTIA – ALUMINIUM SECTION

Moment of inertia in relation to the Y-axis (Iy)	10^3 mm^4	176.52
Moment of inertia in relation to the Z-axis (Iz)	10^3 mm^4	323.34

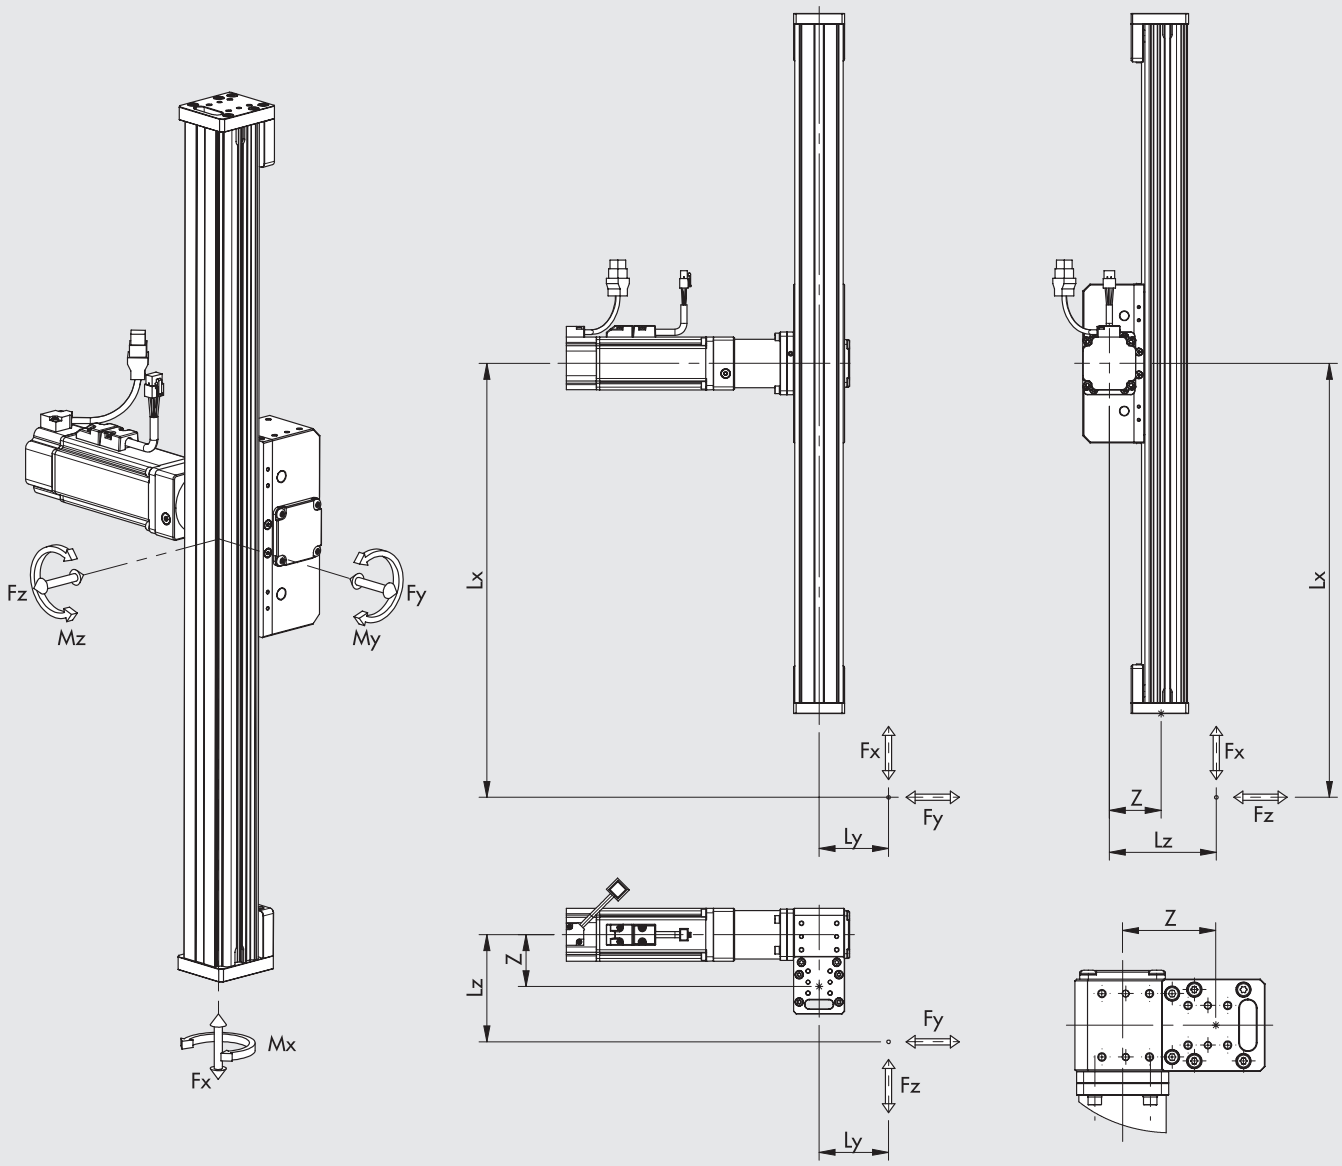
DIAGRAM OF FORCES AND MOMENTS



STATIC VERIFICATION

When the axis is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

Z [m]	Fy0 max [N]	Fz0 max [N]	Mx0 max [Nm]	My0 max [Nm]	Mz0 max [Nm]
0.059	9080	9080	70	642	642

N.B.: The table shows the maximum loads applicable to the guide system beyond which serious damage could be caused. Refer to the Deformation/Load charts on the following pages to verify the axles load conditions.

$Mx = Fz \cdot Ly + Fy \cdot (Lz - Z)$ $My = Fx \cdot (Lz - Z) + Fz \cdot Lx$ $Mz = Fx \cdot Ly + Fy \cdot Lx$

$$\frac{|Mx|}{Mx0\ max} + \frac{|My|}{My0\ max} + \frac{|Mz|}{Mz0\ max} + \frac{|Fx|}{Fx0\ max} + \frac{|Fy|}{Fy0\ max} \leq 1$$

DYNAMIC VERIFICATION

When the axis is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

Z [m]	Fy max [N]	Fz max [N]	Mx max [Nm]	My max [Nm]	Mz max [Nm]
0.059	4540	4540	35	321	321

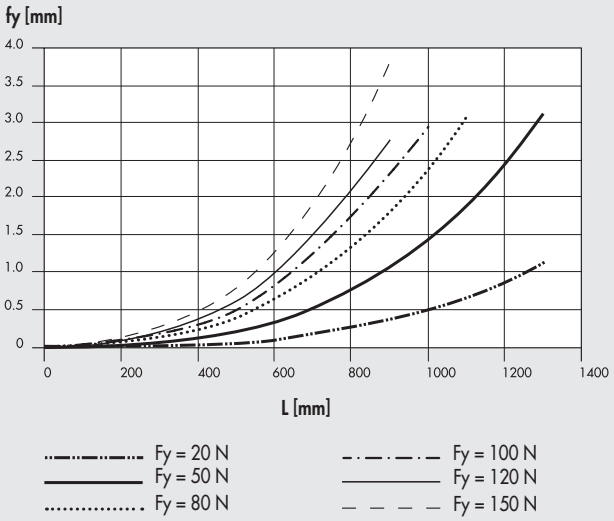
N.B.: The values in the table refer to the guide system and are calculated on the basis of a theoretical operating life of 10,000 km.

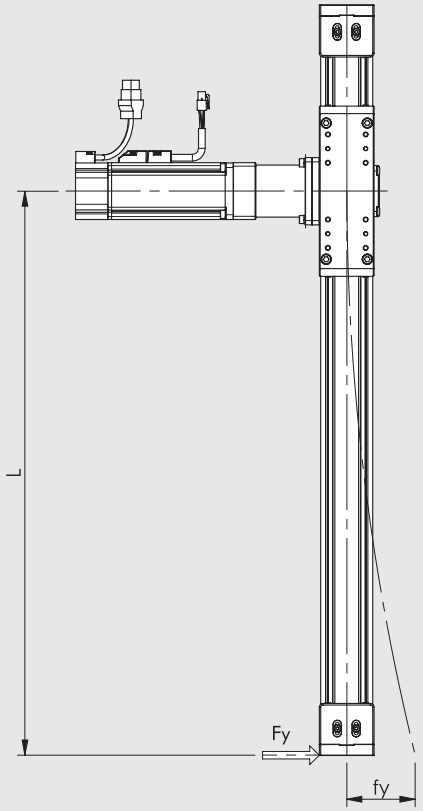
$Mx = Fz \cdot Ly + Fy \cdot (Lz - Z)$ $My = Fx \cdot (Lz - Z) + Fz \cdot Lx$ $Mz = Fx \cdot Ly + Fy \cdot Lx$

$$\frac{|Mx|}{Mx\ max} + \frac{|My|}{My\ max} + \frac{|Mz|}{Mz\ max} + \frac{|Fx|}{Fx\ max} + \frac{|Fy|}{Fy\ max} \leq 1$$

DEFORMATION ACCORDING TO LOAD AND DISTANCE

DEFLECTION IN Y DIRECTION





DEFLECTION IN Z DIRECTION

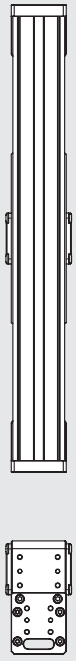
WITHOUT MOTOR



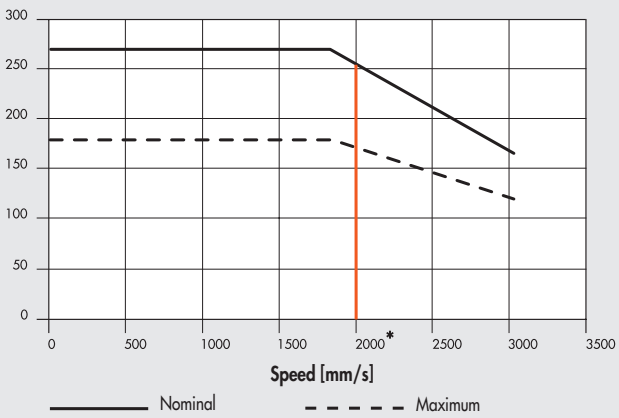
AXIAL LOAD CURVES AS A FUNCTION OF SPEED (AXIS COMPELTE WITH MOTOR AND DRIVE)

N.B.: Check that the following constraints are met for each cycle phase:
- the maximum premissible load and related acceleration values specified in the data sheets;
- the values specified in the force and moment calculation diagram (including moment of inertia).
- deformation according to load.

The following diagrams show the axial load with changing speed (mm/s). Each diagram shows two separate curves:
- **NOMINAL AXIAL LOAD** curve: the nominal axial load delivered by the motor with a duty cycle of 100%
- **MAXIMUM AXIAL LOAD** curve: the axial load delivered by the motor with a duty cycle of less than 100%.

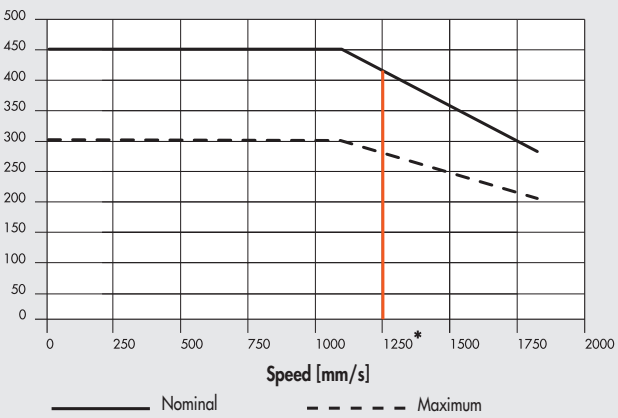
With 1:3 gearbox

Axial load [N]



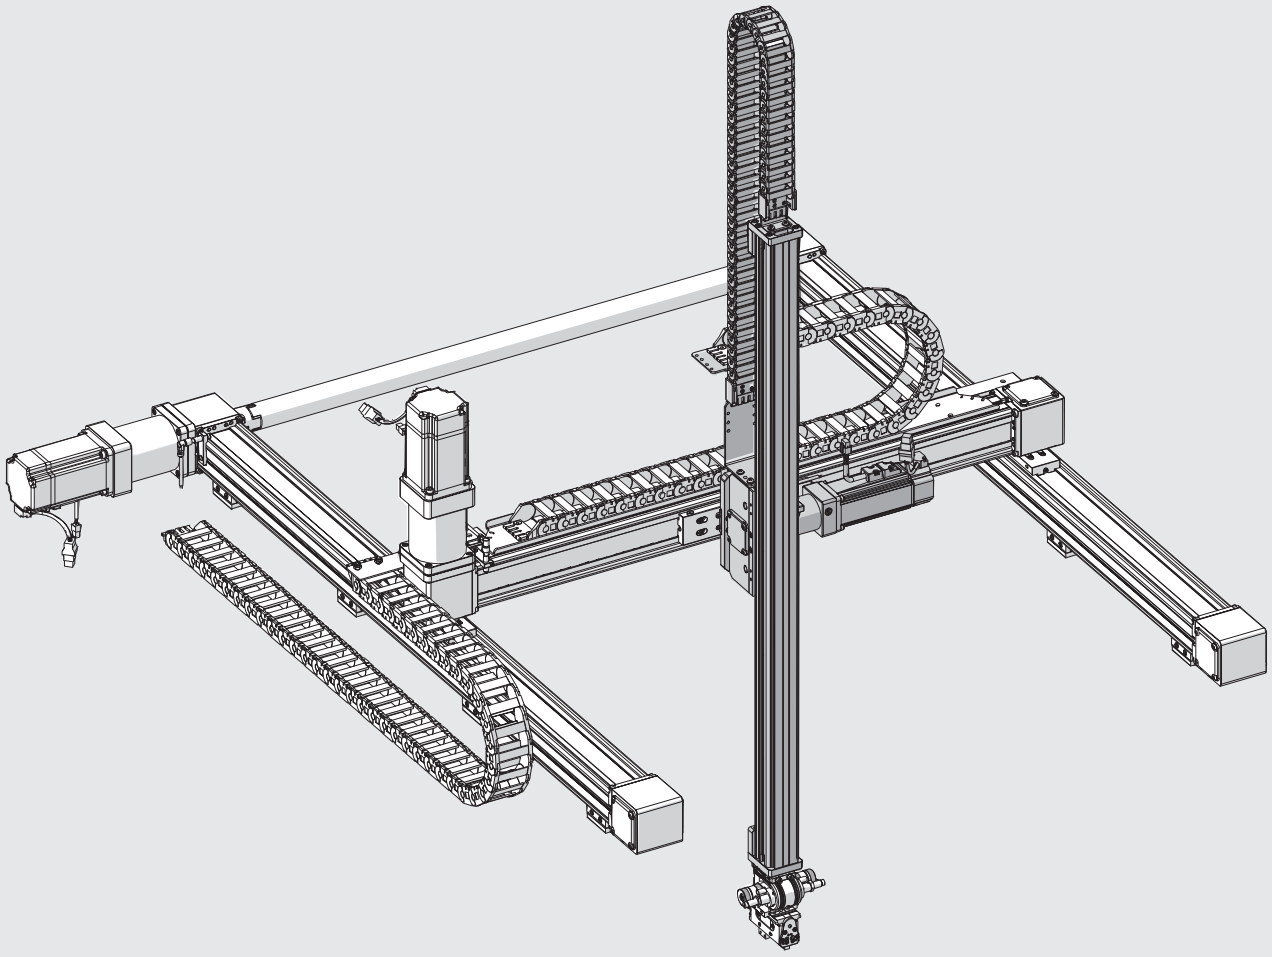
With 1:5 gearbox

Axial load [N]



* = limit of gearbox continuous operation: higher speeds can be reached only for "duty cycle" ≤60% and for a maximum number of 1000 accelerations per hour.

EXAMPLES OF APPLICATION



NOTES

ELECTRIC AXIS
SERIES ELEKTRO SVAK

This belt-driven rodless electric actuator is characterised by the fact that the motor and reducer unit is integral with the carriage, instead of being fitted to one end of the extruded section.
This solution is known as "cantilever". In the typical application the carriage is fixed while the extruded section moves.
The SVAK can be used either horizontally or vertically, but the most common use is in vertical applications, which explains why the motor is supplied complete with a brake that causes the axis to remain still even when it is not electrically powered.
The SVAK can be applied to the SHAK GANTRY series to obtain an X-Y-Z Cartesian manipulator robot featuring high performance and rigidity.
The SVAK uses the universal V-Lock modular system for fixing the carriage to external auxiliaries and the various components to one end of the extruded section.
The sides of the extruded section, which is made of anodized aluminium, houses two hardened and ground guides that slide on adjustable wheels that are integral with the carriage. The carriage is moved by a toothed belt, complete with a tensioning system. Guide lubrication nozzles are also provided on the carriage.
A BRUSHLESS motor with a toothed belt 1:2 gear speed reducer for the pulleys was also chosen. This design was opted for because it ensures excellent load capacities without sacrificing dynamics and the typical speed of this product. In addition to the standard drive proposed in the catalogue, it is also possible to customise the cylinder by using other motors.
The homing position is detected by an inductive proximity sensor included in the supply.
A cable guiding system with cable-carrying chain and mounting bracket is also available on request as an accessory.

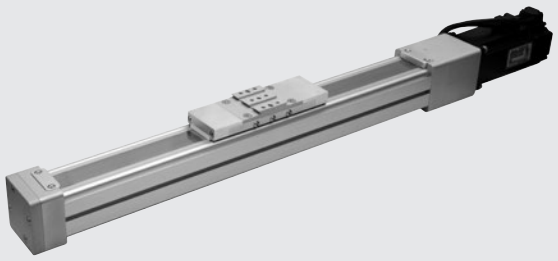
ELECTRIC AXIS - RODLESS SERIES ELEKTRO SK

Electric axis without screw piston rod, with V-Lock interface.
The cylinder frame is made of anodized extruded solid aluminium, which gives the cylinder optimal torsional and flexural rigidity. The typical V-Lock dovetail is provided on three sides of the channel for easy fixing with QS elements.
The carriage features an interchangeable fixing interface plate, which is available with V-Lock axial or V-Lock orthogonal ports or in the blank type for custom solutions.
The carriage is driven by two sturdy pre-loaded ball recirculation bearings that ensure great accuracy of movement.
Threaded holes for the lubrication of the guides and ball recirculation screws are provided on both sides of the carriage.
The carriage is driven by a system consisting of a hardened and tempered screw and a ball recirculation lead nut. The screw is pre-stressed with an elastic load device by means of cup springs in order to reduce vibration and hence noise level and the useful life of the system.
A series of slots for the fixing of magnetic sensors are provided on the two sides of the liner.
Various BRUSHLESS and STEPPING motor drives are available with optional motor brake and/or built-in encoder.
The cylinder can also be supplied without motor drive or, on request, with modules for interfacing with motors from the trade.
The motors can be installed in line with the liner or geared using toothed belt transmission gears.



TECHNICAL DATA		
Admissible ambient temperature for STEPPING motor	°C	from -10 to +50
BRUSHLESS motor	°C	from 0 to +40
Maximum relative humidity (IP40)		90% at 40°C; 57% at 50°C (no condensate)
Maximum duty cycle for STEPPING motor		50%
BRUSHLESS motor		100%
Minimum stroke	mm	100
Maximum stroke	mm	1200
Positioning repeatability	mm	± 0.02
Positioning accuracy	mm	± 0.2 **
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 5 mm)
Sensor magnet		YES
Work position		Any
Interface for fixing on carriage		Axial V-Lock / Orthogonal V-Lock / Blank
Noise level	dBA	<66

** indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc ...

MECHANICAL FEATURES			
Worm screw pitch	mm	4	10
Worm screw diameter	mm	12	
Maximum static axial load* (F_0)	N	2800	
Dynamic axial load	N	5200	3600
Maximum number of revs	1/min	3000	4000
Maximum speed (V_{max})	mm/s	200	670
Maximum acceleration without load	m/s^2	5	
Maximum drive torque applicable to the worm screw shank	Nm	5	

* Maximum admissible static load without causing damage.
N.B.: For the verification of the linear guide system, please refer to page **A5**.125. For the verification of the screw, please refer to page **A5**.126

WEIGHTS			
Worm screw pitch (p)	mm	4	10
Weight at stroke 0 (excluding the carriage fixing interface)	g	2990	3000
Additional weight each mm of stroke	g	7	
Weight of the in-line transmission (without motor)	g	400	
Weight of the geared transmission (without motor)	g	600	
Moving mass	g	1050	

N.B.: You get the total weight of a complete cylinder by adding: weight stroke 0 + stroke [mm] x weight for each mm of stroke + weight of the transmission + weight of the motor

MASS MOMENTS OF INERTIA

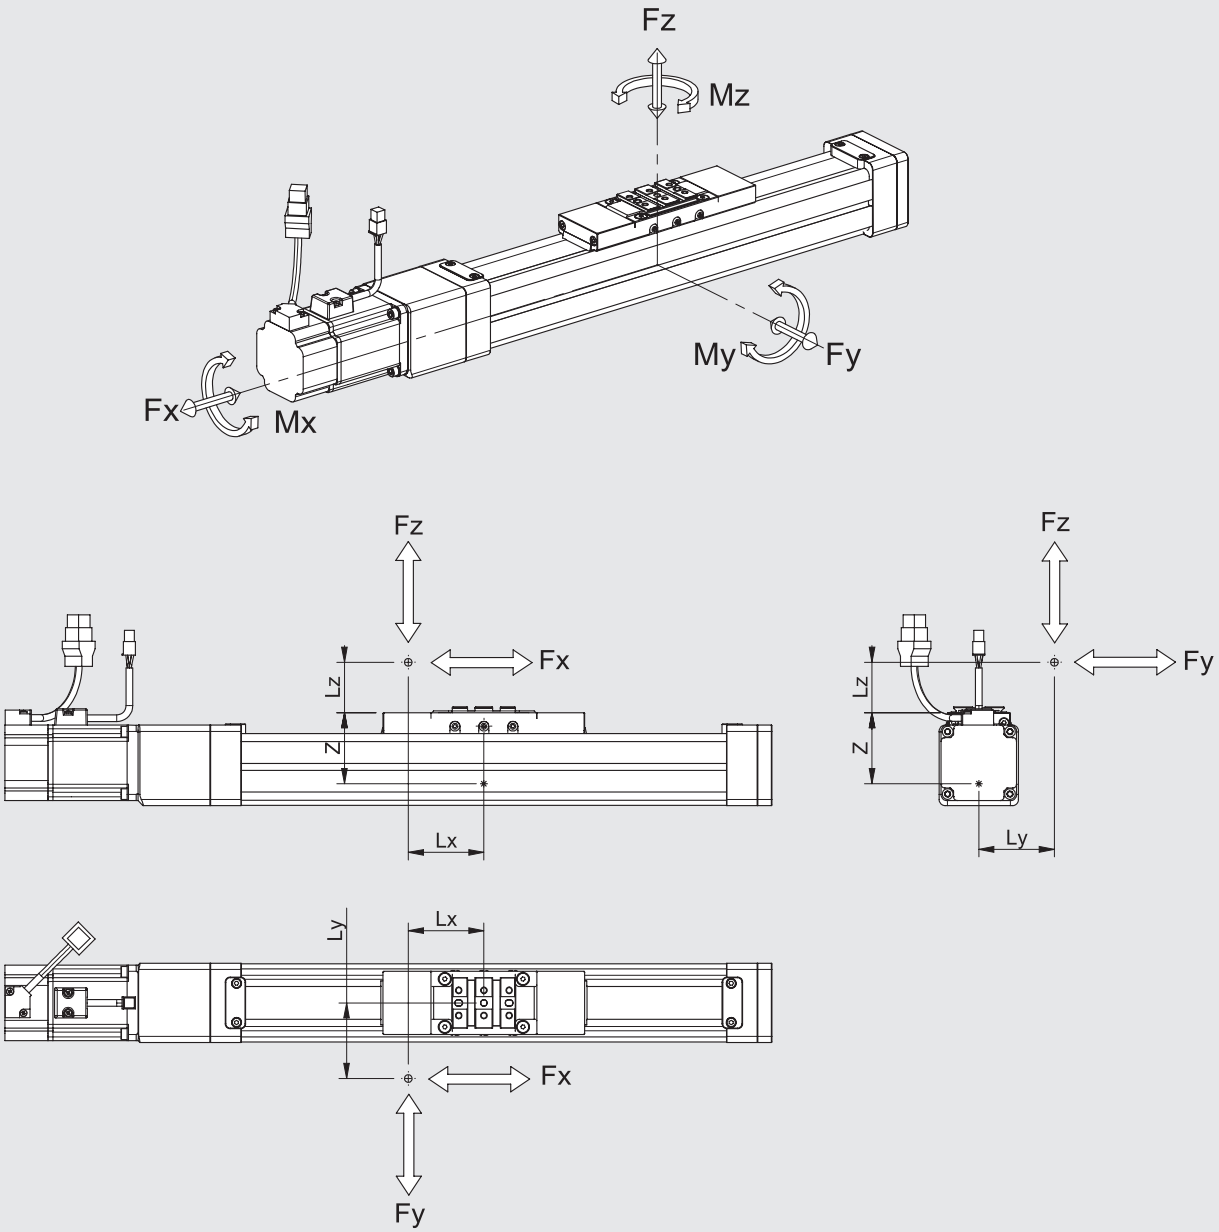
DIAGRAM OF FORCES AND MOMENTS



STATIC VERIFICATION

When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

Z [mm]	Fy0 max [N]	Fz0 max [N]	Mx0 max [Nm]	My0 max [Nm]	Mz0 max [Nm]
57	4500	4500	70	450	450

N.B.: The values in the table relates to the maximum admissible loads beyond which serious damage is likely to occur.

$Mx = Fz \cdot Ly + Fy \cdot (Lz + z)$ $My = Fz \cdot Lx + Fx \cdot (Lz + z)$ $Mz = Fy \cdot Lx + Fx \cdot Ly$

$$\frac{(Mx)}{Mx0\ max} + \frac{(My)}{My0\ max} + \frac{(Mz)}{Mz0\ max} + \frac{(Fy)}{Fy0\ max} + \frac{(Fz)}{Fz0\ max} \leq 1$$

DYNAMIC VERIFICATION

When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

Z [mm]	Fy max [N]	Fz max [N]	Mx max [Nm]	My max [Nm]	Mz max [Nm]
57	2500	2500	35	250	250

N.B.: The values are calculated on the basis of theoretical useful life of 10000 km.

$Mx = Fz \cdot Ly + Fy \cdot (Lz + z)$ $My = Fz \cdot Lx + Fx \cdot (Lz + z)$ $Mz = Fy \cdot Lx + Fx \cdot Ly$

$$\frac{(Mx)}{Mx\ max} + \frac{(My)}{My\ max} + \frac{(Mz)}{Mz\ max} + \frac{(Fy)}{Fy\ max} + \frac{(Fz)}{Fz\ max} \leq 1$$

CALCULATION OF MEAN AXIAL LOAD F_m AND VERIFICATION

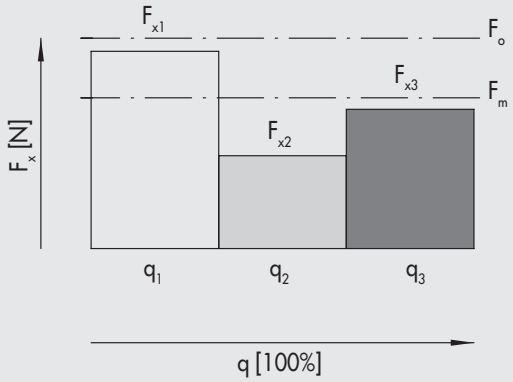
Peak axial load in a work cycle must not exceed the static axial load F_o. The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

Mean axial load F_m

$$F_m = \sqrt[3]{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

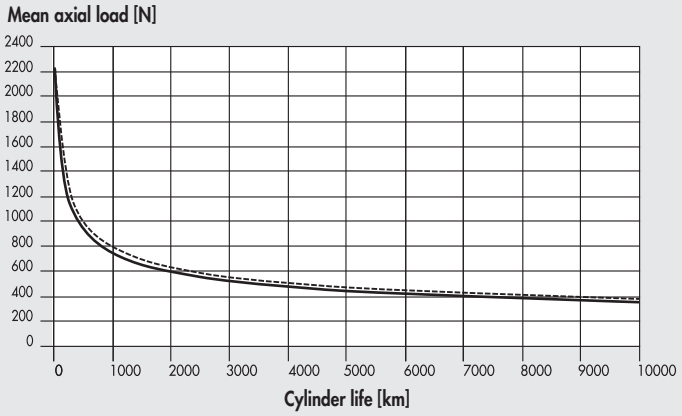
$$F_m = \sqrt[3]{F_{x1}^3 \times \frac{V_{X1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{X2}}{V_m} + \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{X3}}{V_m} \times \frac{q_3}{100} + \ldots}$$

F_x = Axial load at stage x
F_m = Mean axial load during extension
F_o = Static axial load
q = Time segment
V_x = Speed in the phase x
V_m = Average speed



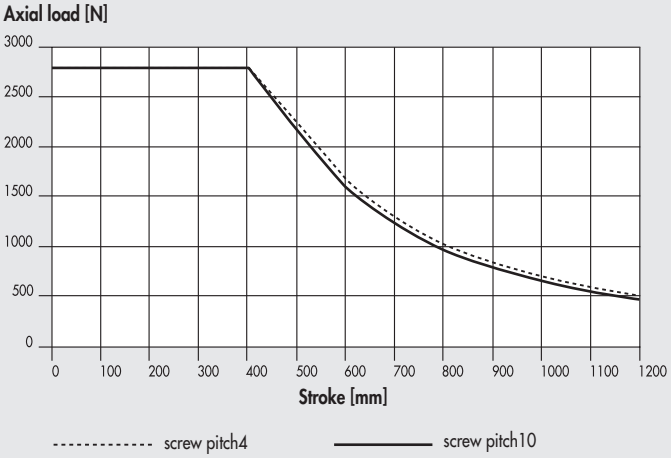
The mean axial load must not exceed the dynamic axial load: $F_m \leq F$
The graph below shows the lifecycle of the screw as a function of F_m

LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD



MAXIMUM AXIAL LOAD

The two variables (axial load and stroke) must comply with the conditions indicated in the graph, otherwise this could cause a serious damage.



CRITICAL SPEED

The two variables (axial load and stroke) must comply with the conditions indicated in the graph, otherwise this could trigger resonance phenomena that could impair the good functioning of the system.

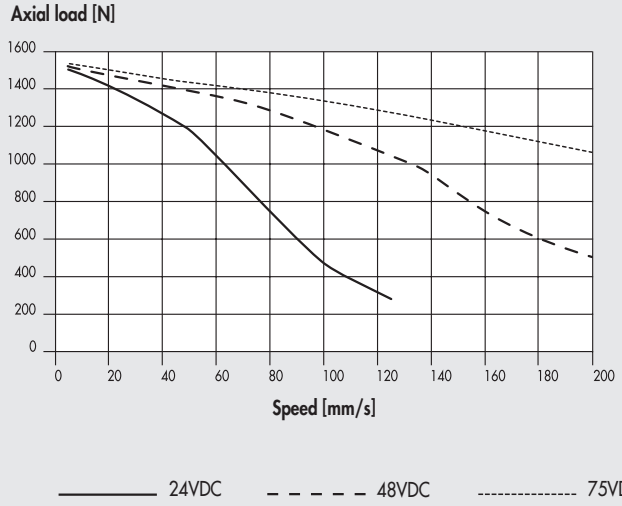
AXIAL LOAD CURVES AS A FUNCTION OF SPEED (CYLINDER COMPELTE WITH MOTOR AND DRIVE)

N.B.: Check that the following constraints are met for each cycle phase:
- the maximum movable masses and related acceleration values specified in the data sheets;
- the values specified in the force and moment calculation diagram (including moment of inertia);
- calculation of average axial load and peak axial load.

N.B.: The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

STEPPING motor code 37M1120001 (uprated revs)

Electric axis with a 4 mm-pitch screw



24VDC 48VDC 75VDC

Electric axis with a 10 mm-pitch screw

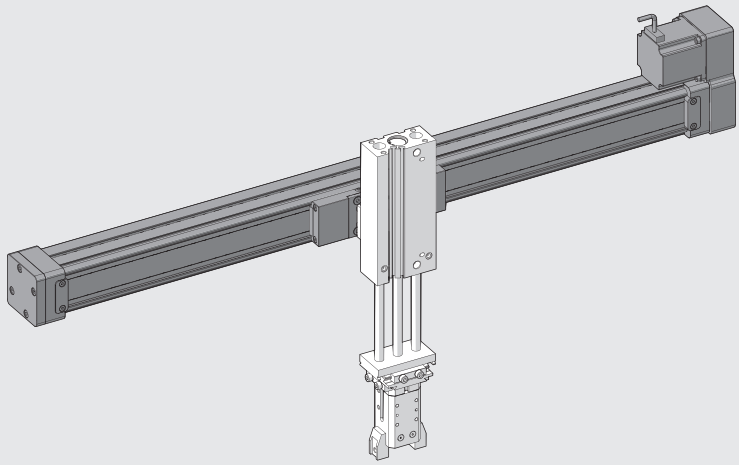
EXAMPLES OF APPLICATION



LUBRICATION DIAGRAM

		① - ③	②	
Screw pitch (p)	mm	-	4	10
Relube grease quantity	g	0.7	0.3	0.5
	cc	0.61	0.26	0.43

The actuator is provided with a series of sealing passages - made in the carriage - which directly connect the lubrication points of the sliding blocks and of the ball bearing screw nut with the outside.
The lubrication points are 3, on both sides of the carriage, in order to ensure greater accessibility in case of maintenance, closed by M4 screws, so identified:
① Lubrication point for the left ball bearing sliding block.
② Lubrication point for the ball bearing screw nut.
③ Lubrication point for the right ball bearing sliding block.
It is recommended to use the provided accessory (code 0950T2R108), which has spherical head according to UNI 7663 A and RHEOLUBE 363 AX1 grease (code 9910506).

Once you identify the most accessible side on the carriage:
- Unscrew the screw that closes the grease nipple.
- Screw, in the same thread, the provided accessory (0950T2R108).
- Pump grease (code 9910506) using the suitable lubricator according to the quantity in table.
- Let the actuator effect 4 complete strokes.
- Repeat the last two operations.
- Remove the grease nipple and stop the thread.
- Switch to the next lubrication point.
- The operation of re-greasing will have to be repeated at least once a year.

NOTES

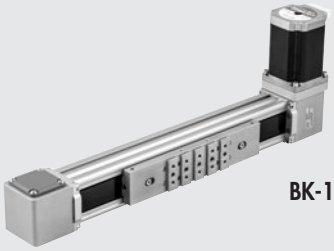
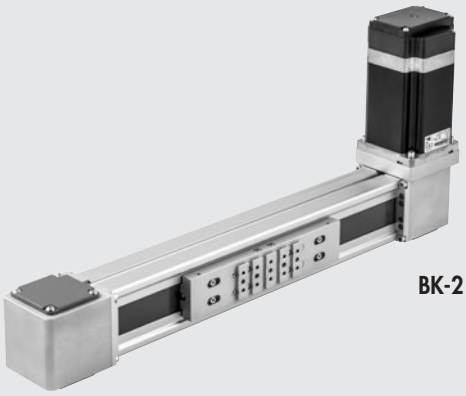
ELECTRIC AXIS BELT-DRIVEN RODLESS, SERIES ELEKTRO BK

Electric belt-drive rodless axis with a bearing structure made up of anodized extruded aluminium.
The typical V-Lock dovetail is fitted to the extruded side (opposite the slide), which facilitates the fixing using QS elements; at both sides there are grooves for the installation of the bracket fixing the proximity switch (optional), which detects the position of the slide.
The slide is moved by the polyurethane toothed belt with steel cables.
The parabolic profile of the belt tooth makes it possible to maintain a high efficiency level, contain the level of noise and vibration from transmission gears.
The axis is available in two sizes, BK-1 and BK-2.
The slide interface is characterised by the V-Lock profile complete with M5 threaded holes, pinholes and key seats, which guarantees numerous fixing options (not present in the BK-2 heavy XL version).
All the versions have in-line steel guides that are housed in an extruded structure. The BK-1 size is available in two variants: the "Medium" uses castors running along hardened and tempered guides with double-row ball bearings, and the more performing "Heavy" version consists of a guiding system with a rail and ball recirculation pads.
The BK-2 size is available in two variants, both with rail and ball recirculation pads, the "Heavy" type has two pads and the "Heavy XL" has a longer slide and four pads. In the BK-2 size, the belt has a special profile that, when coupled with the extruded profile, prevents any dirt or foreign bodies from entering inside. BRUSHLESS and STEPPING motors are available, with optional motor brake and/or built-in encoder.
The versions with a BRUSHLESS motor can be equipped with a toothed belt speed reducer or a planetary gearbox.



BK-1



BK-2

The electric axis can be ordered without drive or, on request, with modules for interfacing with motors available from the trade.
The motors can be installed on all the four hubs of the heads, and their position can be changed at any time, without requiring any additional operation.
Various accessory kits for the installation of a gantry system starting from one axis are also available.

TECHNICAL DATA		BK-1		BK-2	
		Medium	Heavy	Heavy	Heavy XL
Admissible ambient temperature STEPPING motor	°C	from -10 to +50			
BRUSHLESS motor	°C	from 0 to +40			
Maximum relative humidity		90% at 40°C; 57% at 50°C (no condensate)			
Maximum duty cycle for STEPPING motor		50%			
BRUSHLESS motor		100%			
Minimum stroke	mm	110		140	
Maximum stroke	mm	3800	2800 ◆	3800	3600
Repeatability	mm	± 0.05			
Positioning accuracy ●	mm	± 0.4			
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 5 mm)			
Homing position sensor		Inductive sensors			
Work position		Any			
Noise level	dBA	<66			
Type belt		RPP5 in polyurethane with steel tensioning cables		HTD5 in polyurethane with steel tensioning cables	
Maximum belt extension		0.1%			
Pulley feed/revolution	mm	110		140	
Pulley pitch diameter	mm	35.01		44.56	
Maximum axial force ■	N	800		1250	
Maximum number of revs	1/min	3500	3500 (2500 ✱)	1500	
Maximum speed (without load)	m/s	6	6 (4 ✱)	3.5	
Maximum acceleration (without load)	m/s^2	50		50	
Maximum driving torque applicable to the pulley	Nm	15		32	
Maximum applicable motor shaft diameter ▲	mm	14		19	

● Indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc.
■ Maximum load admissible on the belt: for the sizing, perform the checks as shown in the following pages.
▲ Compact configuration with the motor shaft partially inserted into the pulley axle.
◆ A different version of guide and recirculating pads are required for travels over 1800 mm, with reduced speed.
✱ Values referring to travels >1800

WEIGHTS		BK-1		BK-2	
		Medium	Heavy	Heavy	Heavy XL
Weight at stroke 0 (drive excluded)	g	2324	2325	5356	8628
Additional weight each mm of stroke	g	4	3.7	7.6	
Weight of standard motors with flange, joint and bolts and nuts	g				
STEPPING		1560		4632	
STEPPING with encoder		-		4732	
STEPPING with encoder + brake		-		5332	
BRUSHLESS		1750		3356	
BRUSHLESS with brake		2150		4156	
BRUSHLESS with belt transmission gear ratio1:2		2330		4455	
BRUSHLESS with brake + belt transmission gear ratio 1:2		2730		5255	
BRUSHLESS with 1:3 gearbox		2600		7980	
BRUSHLESS with brake + 1:3 gearbox		3000		8780	
BRUSHLESS with 1:5 gearbox		2600		7980	
BRUSHLESS with brake + 1:5 gearbox		3000		8780	

MASS AND MOMENT OF INERTIA		BK-1		BK-2	
		Medium	Heavy	Heavy	Heavy XL
Moving mass at stroke 0 (Mx)	g	570	625	1125	3038
Moving mass for each mm of stroke	g	0.22		0.33	
J_0 at stroke 0	kg mm^2	72		411	
J_1 each metre of stroke	kgmm^2/m	68		164	
J_2 each kg of load	kgmm^2/kg	307		497	
$J_{belt\ transmission\ 1:2}$	kg mm^2	32		130	

The reduced moment of inertia of total mass at the driving shaft is: $J_{tot} = [J_1 \cdot \text{Stroke [m]} + J_2 \cdot (\text{Load [kg]} + \text{Mx [kg]}) + J_0] \cdot \tau^2 + J_3$

$\tau = 1/u$

u = Gearing ratio

$J_3 = J_{belt\ transmission}$ (to be used, if present)

$J3 = J_{gear\ ratio}$ (to be used, if present)

In order to ensure the proper functioning of the system and avoid instability, it is necessary to limit the ratio K between the reduced moment of inertia at the motor shaft $\mathbf{J_{total}}$ and the moment of inertia at the motor $\mathbf{J_{motor}}$.

$$K = \frac{J_{total}}{J_{motor}}$$

1<K<15 with STEPPING motors

1<K<40 with BRUSHLESS motors

These figures apply to motors supplied by Metal Work. Motors of other makes could require different maximum values.
This limit also depends on the level of control of the required movement: e.g. if the movements need to be coordinated, the ratio between the inertias must be considerably reduced.
Indicatively, it is **advisable NOT to exceed** the following values:

1<K<5 with STEPPING motors

1<K<10 with BRUSHLESS motors

It is worth noting that system operation can be enhanced by varying the drive parameters.
For BRUSHLESS motors supplied by Metal Work, a "tuning" procedure is envisaged to optimise motor operation depending on the mechanics applied to the axle. For STEPPING motors, it is advisable to try to select a different step of rotation.

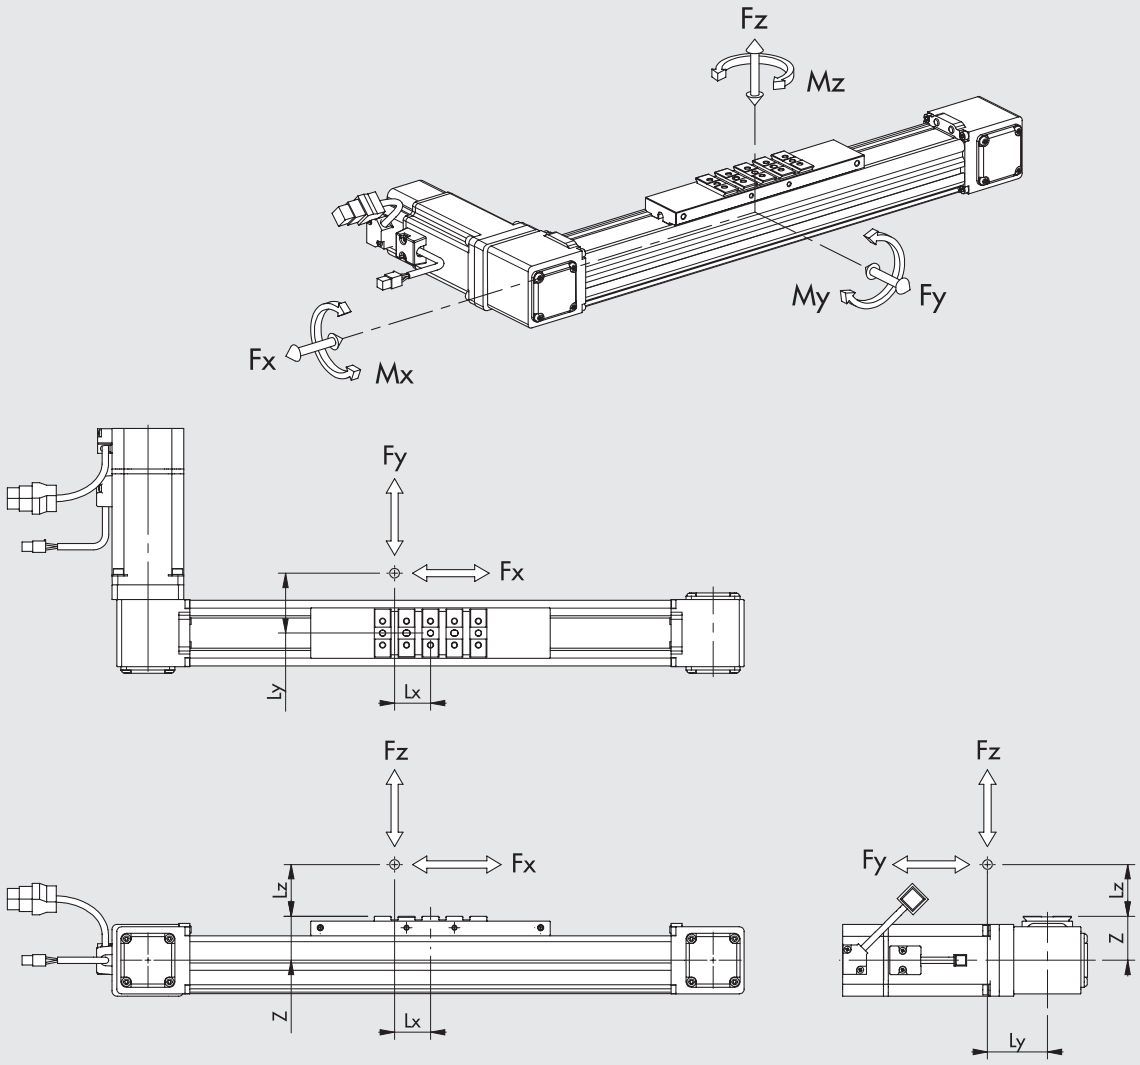
DIAGRAM OF FORCES AND MOMENTS



STATIC VERIFICATION

When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

SIZE	VERSION	Z [mm]	Fy0 max [N]	Fz0 max [N]	Mx0 max [Nm]	My0 max [Nm]	Mz0 max [Nm]
BK-1	Medium	33	1600	900	18	60	140
	Heavy	35	5700	5700	40	570	570
BK-2	Heavy	45	9600	9600	150	970	970
	Heavy XL	45	19200	19200	300	3400	3400

N.B.: The table shows the maximum loads applicable to the guide system beyond which serious damage could be caused.
Refer to the Deformation/Load charts on the following pages to verify the axles load conditions.

$Mx = Fz \cdot Ly + Fy \cdot (Lz + z)$ $My = Fz \cdot Lx + Fx \cdot (Lz + z)$ $Mz = Fy \cdot Lx + Fx \cdot Ly$

$$\frac{(Mx)}{Mx0\ max} + \frac{(My)}{My0\ max} + \frac{(Mz)}{Mz0\ max} + \frac{(Fy)}{Fy0\ max} + \frac{(Fz)}{Fz0\ max} \leq 1$$

DYNAMIC VERIFICATION

When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

SIZE	VERSION	Z [mm]	Fy max [N]	Fz max [N]	Mx max [Nm]	My max [Nm]	Mz max [Nm]
BK-1	Medium	33	1000	600	12	40	90
	Heavy	35	2850	2850	20	285	285
BK-2	Heavy	45	4800	4800	75	485	485
	Heavy XL	45	9600	9600	150	1700	1700

N.B.: The values in the table refer to the guide system and are calculated on the basis of a theoretical operating life of 10,000 km.

$Mx = Fz \cdot Ly + Fy \cdot (Lz + z)$ $My = Fz \cdot Lx + Fx \cdot (Lz + z)$ $Mz = Fy \cdot Lx + Fx \cdot Ly$

$$\frac{(Mx)}{Mx\ max} + \frac{(My)}{My\ max} + \frac{(Mz)}{Mz\ max} + \frac{(Fy)}{Fy\ max} + \frac{(Fz)}{Fz\ max} \leq 1$$

NOTES

METAL WORK PNEUMATIC

NOTES

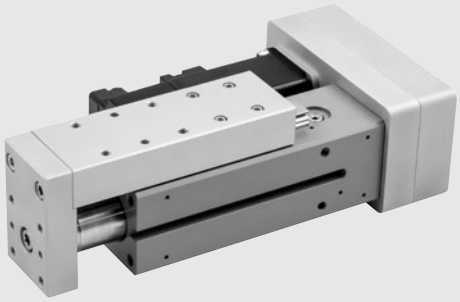
ELECTRIC SLIDE
SERIES ELEKTRO CS

Compact electric slide, equipped with a guideway and a ball-recirculating pad capable of withstanding high radial loads on the piston rod.
Available in the 55 mm stroke, the slide in the ELEKTRO CS series features the same technical choices as those made in the ELEKTRO SSC series in terms of extreme compactness and pure design, including the wear-resistant aluminium body.
Driven by a hardened steel screw and recirculating ball screw nut, the stainless-steel piston rod is coupled, via a rigid aluminium structure, to a recirculating pad that runs along a guide rail integral with the main body. The coupling system prevents the piston rod from rotating.
A magnet is integral with the piston rod to ensure an end-stop signal, while two longitudinal slots are provided on the body to accommodate Square-type sensors.
For easy re-greasing of the screw and nut, the cylinder body comes with a special hole that is normally closed with a tight-fitting plug.
A wide range of standard pneumatic cylinder accessories as well as dedicated accessories can be used to fix the slide.
The ELEKTRO CS series slide is available in either a standard profile version or a V-Lock interface version.
The electric motor can be either connected in-line with the slide or by means of a transmission system; in the latter case, three different configurations are available.
The motor can be selected from an optimised range comprising both STEPPING and BRUSHLESS motors.
Drives most suitable for motor control are also provided. When using motors of a make or model other than those offered in the catalogue, special flanges and couplings can be made and supplied on request.

in-line version

geared version



TECHNICAL DATA		Ø 32
Environmental temperature range for STEPPING motors	°C	from -10 to +50
BRUSHLESS motors	°C	from 0 to +40
Electrical protection rating with STEPPING motors		IP55 or IP65 (see key to codes on page **A5**.168)
BRUSHLESS motors		IP65 (see key to codes on page **A5**.168)
Maximum relative humidity of the air for IP55 STEPPING motor		90% with 40°C; 57% with 50°C (no condensate)
IP65 BRUSHLESS motor		90% (no condensate)
Standard strokes (including 5 mm extra-stroke) for homing	mm	55
Positioning repeatability	mm	±0.02
Positioning accuracy	mm	±0.2 *
Versions		Ball screw
		In line or geared motor
Anti-rotation of the piston rod		YES
Uncontrolled impact at the end of stroke		NOT ALLOWED (for rear buffer ONLY)
Sensor magnet		YES
Work position		Any
Interface for fixing on carriage		Standard / V-Lock

* Indicative average data that gets influenced by various factors such as the type of motor, the cylinder version, etc ...

MECHANICAL FEATURES

Screw pitch (p)	mm	4	10
Screw diameter	mm	12	12
Static axial load (F_o) *	N	3000	3000
Dynamic axial load (F) **	N	5200	3160
Maximum number of revs	1/min	3000	3000
Maximum speed (V_{max})	mm/s	200	500
"K" ratio of motor revs and piston rod speed	n/V	15	6
Maximum acceleration without load	m/s^2	5	
Maximum driving torque applicable to the screw	Nm	2.5	

Example: V = 100 mm/s; pitch = 10 → K = 6 n = V · K = 100 · 6 = 600 rpm

* Static loads bearable without damage.
** Calculate mean axial load and the calculate life (see graphs on page **A5**.160).
N.B.: For the verification of the linear guide system, please refer to page **A5**.159. For the verification of the screw, see bottom of page.

WEIGHTS

Screw pitch (p)	mm	4	10
Weight at stroke 0, in-line version	g	1188	1198
Weight at stroke 0, geared version	g	1498	1508
Additional weight each mm of stroke	g	7.6	7.6
Moving mass at stroke 0 (M0)	g	546	553
Additional moving mass each mm of stroke (MX)	g	2.5	2.5

N.B.: You get the total weight of a complete slide by adding: weight stroke 0 + stroke [mm] · weight for each mm of stroke + weight of the motor.

MASS MOMENTS OF INERTIA

Screw pitch	mm	4	10
Transmission ratio (τ)		1:1	1:1
J0 at stroke 0	$kgmm^2$	7.821	7.934
J1 each metre of stroke	$kgmm^2/m$	12.76	13.76
J2 each kg of load	$kgmm^2/kg$	0.4053	2.5330
J3 in-line transmission	$kgmm^2$	2.879	2.879
J3 geared transmission	$kgmm^2$	3.237	3.237

The total mass moment of inertia (Jtot) reduced for the motor is: Jtot = {J1 · stroke [m] + J2 · [(MX · stroke) + M0 + load] + J0} · τ2 +J3
MX and M0 are defined in the WEIGHTS table.

CALCULATION OF MEAN AXIAL LOAD F_m AND VERIFICATION

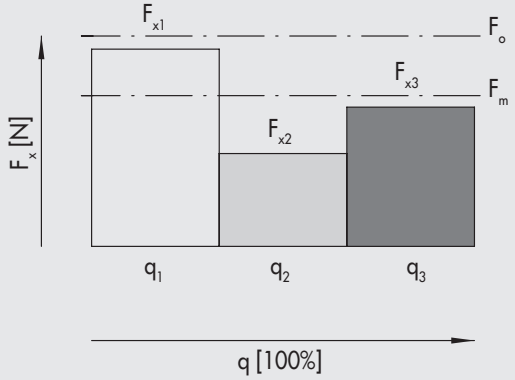
Peak axial load in a work cycle must not exceed the static axial load Fo.
The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

Mean axial load F_m

$$F_m = \sqrt[3]{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

$$F_m = \sqrt[3]{F_{x1}^3 \times \frac{V_{X1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{X2}}{V_m} + \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{X3}}{V_m} \times \frac{q_3}{100} + \ldots}$$

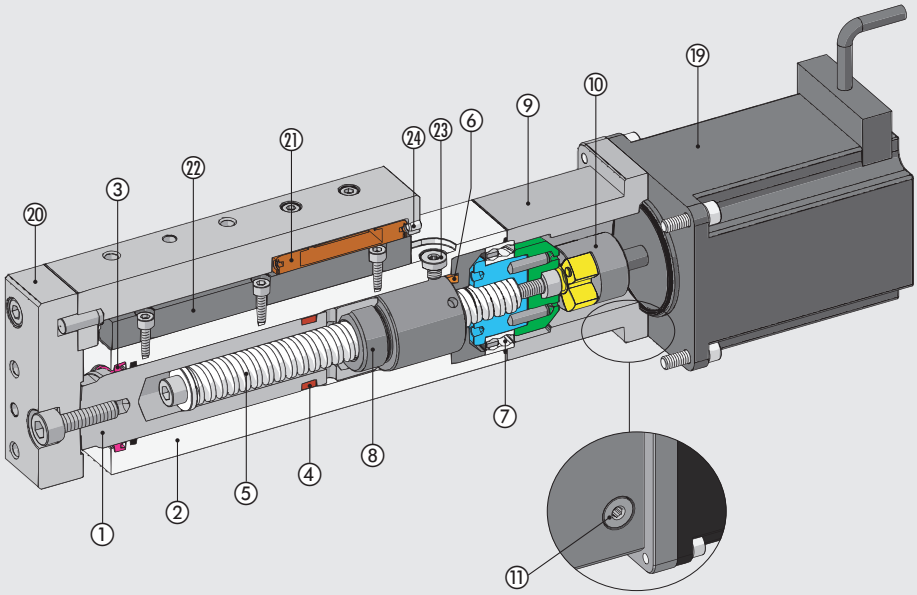
F_x = Axial load at stage x
F_m = Mean axial load during extension
F_o = Static axial load
q = Time segment
V_x = Speed in the phase x
V_m = Average speed



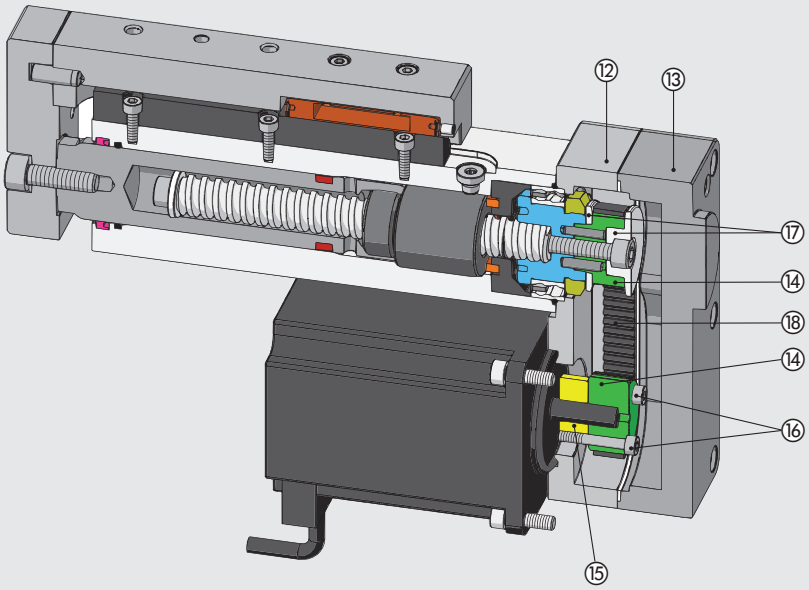
The mean axial load must not exceed the dynamic axial load: $F_m \leq F$
The graphs on page **A5**.160, show screw life as a function of F_m

COMPONENTS

IN-LINE VERSION

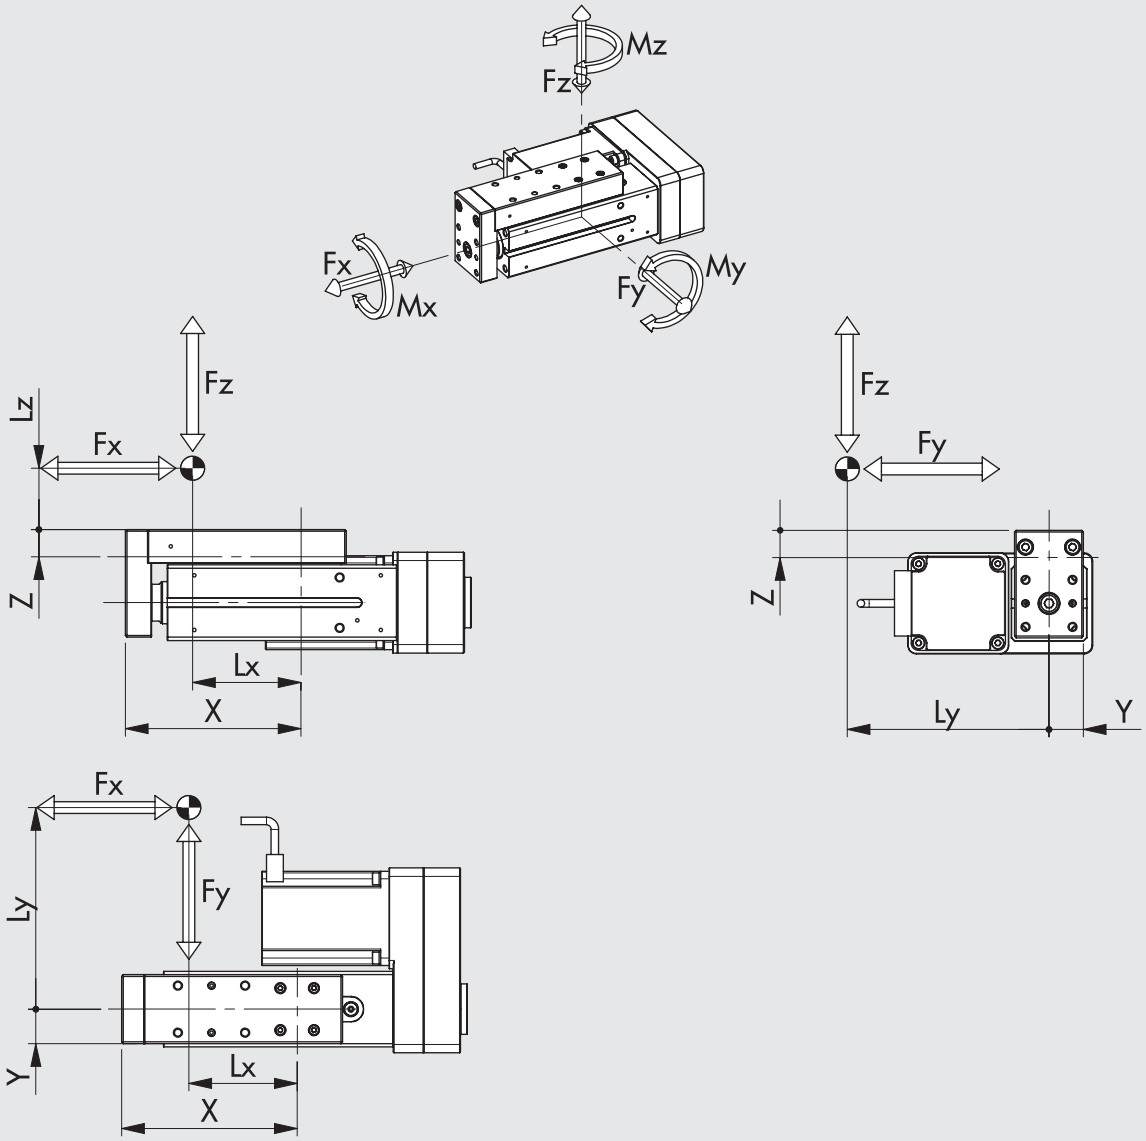


GEARED VERSION



① PISTON ROD: stainless steel (AISI 316)
② BODY: aluminium alloy with wear-resistant coating
③ WIPER RING: polyurethane
④ MAGNET: plastoferrite (optional)
⑤ RECIRCULATING BALL SCREW: hardened and rolled steel
⑥ BUFFER: polyurethane
⑦ BEARING: oblique with two ball rings
⑧ RECIRCULATING BALL SCROLL: steel
⑨ ADAPTOR PLATE: anodized aluminium
⑩ ELASTIC COUPLING: aluminium / polyurethane
⑪ PLUG: for access to the elastic coupling screw
⑫ TRANSMISSION PLATE: anodized aluminium
⑬ COVER: anodized aluminium
⑭ COG PULLEY: anodized aluminium
⑮ ELASTIC COLLAR: anodized aluminium
⑯ ELASTIC COLLAR-LOCKING SCREWS: zinc-plated steel
⑰ BELT FLANGES: anodized aluminium
⑱ TOOTHED BELT: polyurethane with steel cables
⑲ MOTOR
⑳ SLIDE: anodized aluminium
㉑ BALL RECIRCULATION PAD: stainless steel / technopolymer
㉒ GUIDING RAIL FOR PADS: hardened stainless steel
㉓ PLUG: for screw greasing
㉔ GRUB SCREW: for pad greasing

DIAGRAM OF FORCES AND MOMENTS



STATIC VERIFICATION

When on the slide is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

X [mm]	Y [mm]	Z [mm]	Fy max [N]	Fz max [N]	Mx max [Nm]	My max [Nm]	Mz max [Nm]
104.5	20.5	16.25	2790	2790	21.8	13.5	13.5

N.B.: The values in the table relates to the maximum admissible loads beyond which serious damage is likely to occur.

$Mx = Fy \cdot (Lz + z) + Fz \cdot Ly \qquad My = Fz \cdot Lx + Fx \cdot (Lz + z) \qquad Mz = Fy \cdot Lx + Fx \cdot Ly$

$$\frac{(Mx)}{Mx0\ max} + \frac{(My)}{My0\ max} + \frac{(Mz)}{Mz0\ max} + \frac{(Fy)}{Fy0\ max} + \frac{(Fz)}{Fz0\ max} \leq 1$$

DYNAMIC VERIFICATION

When on the slide is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

X [mm]	Y [mm]	Z [mm]	Fy max [N]	Fz max [N]	Mx max [Nm]	My max [Nm]	Mz max [Nm]
104.5	20.5	16.25	1395	1395	10.9	6.75	6.75

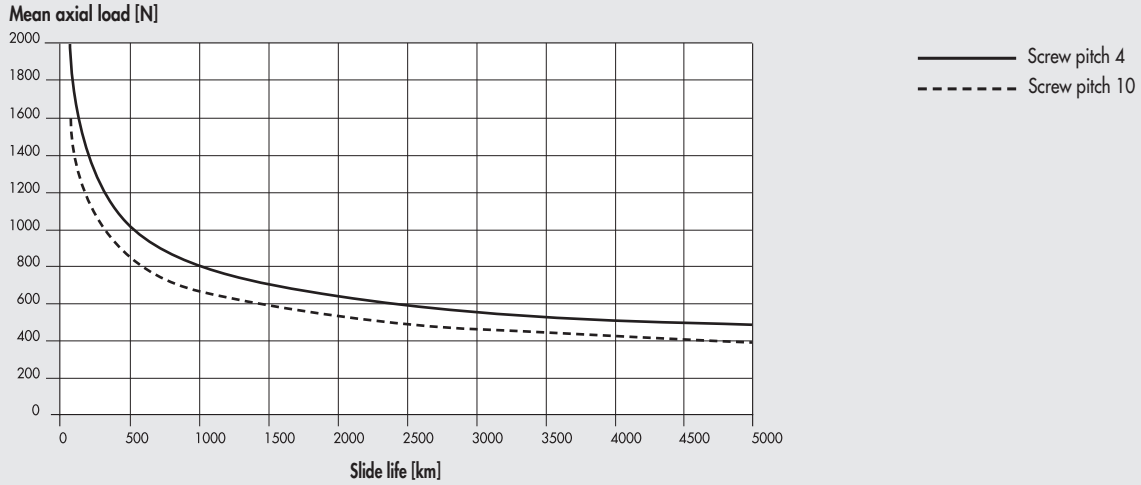
N.B.: The values are calculated on the basis of theoretical useful life of 10000 km.

$Mx = Fy \cdot (Lz + z) + Fz \cdot Ly \qquad My = Fz \cdot Lx + Fx \cdot (Lz + z) \qquad Mz = Fy \cdot Lx + Fx \cdot Ly$

$$\frac{(Mx)}{Mx\ max} + \frac{(My)}{My\ max} + \frac{(Mz)}{Mz\ max} + \frac{(Fy)}{Fy\ max} + \frac{(Fz)}{Fz\ max} \leq 1$$

LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD, VERSION WITH BALL SCREW

Life characteristics can vary considerably from those indicated in the graphs due to different operating conditions (radial loads, temperature, lubrication status, etc.).



AXIAL LOAD CURVES AS A FUNCTION OF SPEED (SLIDE COMPLETE WITH MOTOR AND DRIVE)

N.B.: The obtainable load values already take the efficiency of the system into account.
For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating.
Consequently, available axial load with the motor stopped is also reduced by 50%.

Ø 32 with pitch 4 ball screw, STEPPING motor, STEPPING motors with encoder, STEPPING motors with encoder + brake

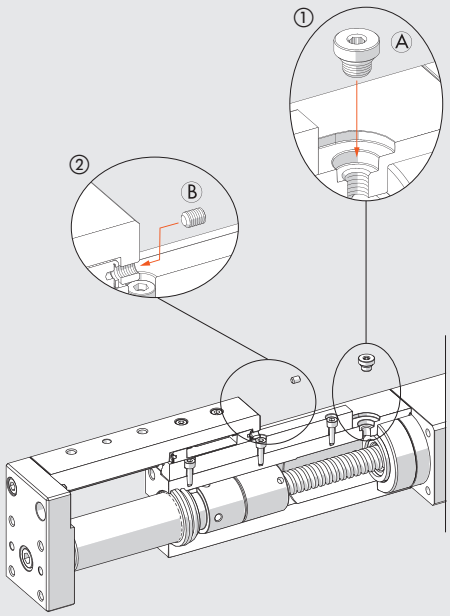
METAL WORK PNEUMATIC

LUBRICATION DIAGRAMS



The slide features two specific lubrication zones:
① greasing point for the recirculating ball nut;
② greasing point for the recirculating ball pad.
Only use food-grade grease for re-greasing ULTRAPLEX FG1 NSF CAT H1 (code 9910514), according to the quantities indicated in the table.

Follow the steps below:

- retract the piston rod towards the motor adapter plate, as far as it will go;
- move the piston rod at low speed and/or controlled torque forwards by a value corresponding to the cylinder total stroke;
- remove plug A7 Ⓐ and grub screw Ⓑ;
- use a grease gun to pump grease into the two grease nipples;
- make the slide complete 4 strokes (at the end of which the piston rod will be back in its initial position);
- repeat the latter two steps;
- replace plug A7 Ⓐ grub screw Ⓑ;

The operation of re-greasing will have to be repeated at least once a year.

		Pad	Screw	
Pitch (p)	mm	-	4	10
Relube grease quantity	g	0.7	0.3	0.5

NOTES

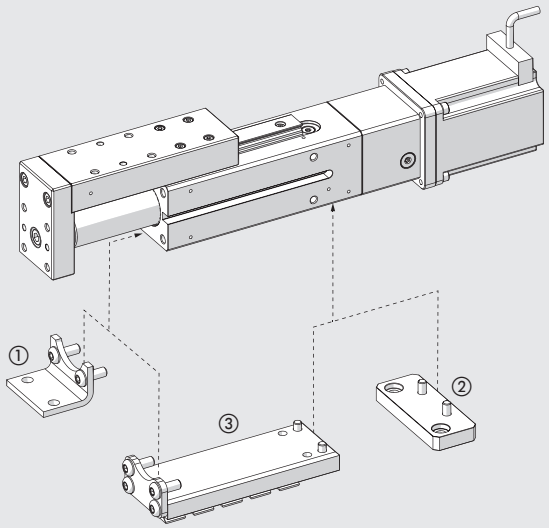
ACCESSORIES FOR ELECTRIC SLIDE SERIES ELEKTRO CS

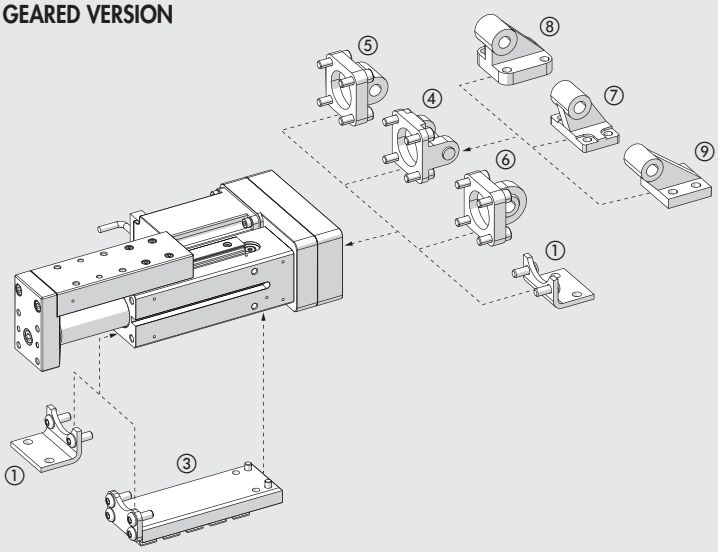
Note: Where specified, limit the maximum axial loads (Fmax) according to the electric slides.

FIXING OPTIONS

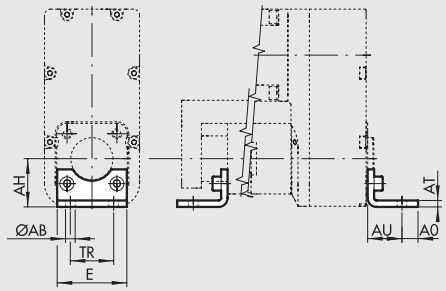
IN-LINE VERSION



GEARED VERSION



① FOOT MODEL A ELEKTRO CS

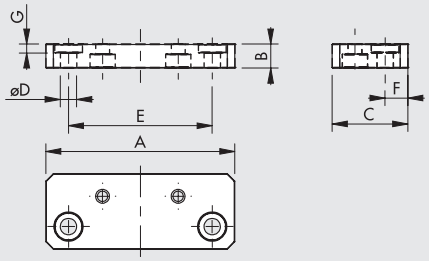


STEEL

Code	Ø	Ø AB	AH	AO	AT	AU	TR	E	Weight [g]	Fmax [N]
0950327111	32	7	32	11	4	24	32	45	76	1600

Note: Individually packed with 2 screws.

② ELEKTRO CS IN-LINE BACK FOOT

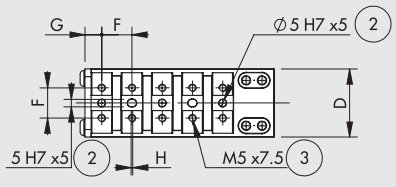


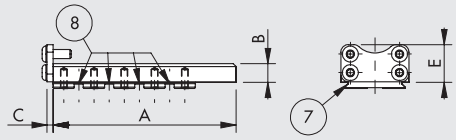
ALUMINIUM

Code	Ø	A	B	C	D	E	F	G	Weight [g]	Fmax [N]
0950327110	32	75	9.5	30	6.5	57	9	3.5	60	1600

Note: Individually packed with 2 screws.
N.B.: Use in the In-Line version only.

③ ELEKTRO CS V-LOCK FITTING





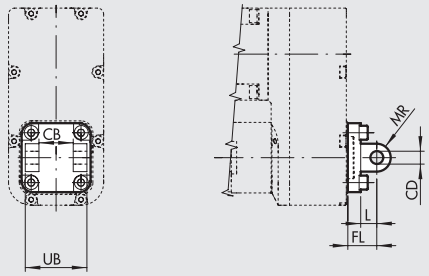
ALUMINIUM

Code	Ø	A	B	C	D	E	F	G	H	Weight [g]
0950327110K	32	121	13	4	45	25	20	11	1	740

Note: Individually packed with 6 screws.

② Holes for centring pins
③ Threaded holes for fixing
⑦ Dovetail for "V-Lock" fixing. For standard dimensions, see **chapter V-Lock adaptors**.
⑧ Slot for "V-Lock" precision key

④ FEMALE HINGE - MODEL B



ALUMINIUM

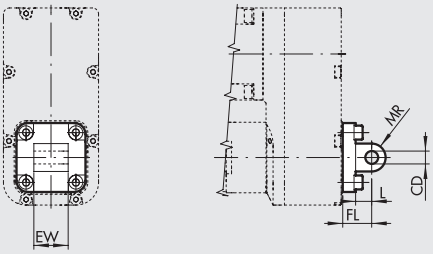
Code	Ø	UB	CB H14	FL	CD H9	MR	L	Weight [g]	Fmax [N]
W0950322003	32	45	26	22	10	10	12	116	800

STEEL

Code	Ø	UB	CB H14	FL	CD H9	MR	L	Weight [g]	Fmax [N]
W095E322003	32	45	26	22	10	10	13	348	1600

Note: Supplied with 4 screws, 4 washers, 2 snap rings and 1 pin.
N.B.: Mounting requires 4 M6x16 UNI 5931screws.

⑤ MALE HINGE - MODEL BA



ALUMINIUM

Code	Ø	EW	FL	MR	CD H9	L	Weight [g]	Fmax [N]
W0950322004	32	26	22	10	10	13	94	800

NOTES

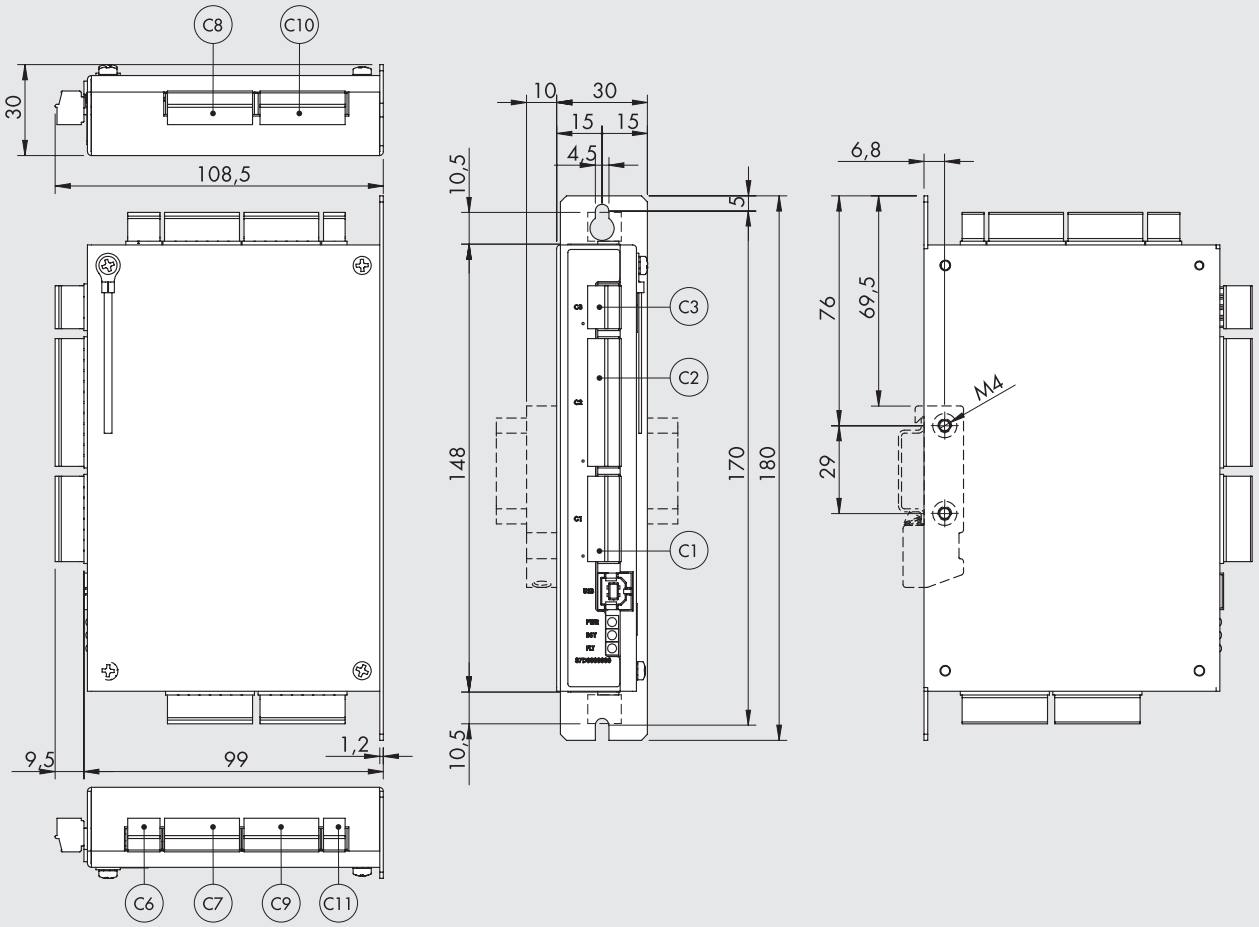
PROGRAMMABLE UNIT
e.motion

An independent system, ideal for stand-alone applications not requiring the use of any PLC. It can control electric cylinders simply and intuitively, or any other electric actuator, using either a STEPPING MOTOR or a BRUSHLESS motor of any size and capacity, connected to the relevant drive with a STEP/DIRECTION interface. It is connected to PC via USB port, and the user has access to a motion-control configuration, programming and debug environment irrespective of the type of motor/drive/actuator chosen, which uses a user-friendly language (MW POS) and a set of simple instructions and functions to create work cycles, including complex ones as it can handle both digital and analogue inputs and outputs.
It consists of an electronic board housed in a metal box, which is designed for fixing to a wall or on a DIN bar with a fitting, and is equipped with removable screw connectors for wiring purposes.

TECHNICAL DATA		
Code		**37D0000000**
Stand-alone motion programming unit for motors-drives with a STEP/DIRECTION interface, type		Metal box
Dimensions	mm	148 x 99 x 30
Weight	g	460
Connectors		Screw type
Temperature range		0 to 50 °C – relative humidity 10-90%, non-condensing
Degree of protection		IP 20
Voltage		24VDC ±10%
Communication interface		Serial USB port for connection to PC
Configuration/programming/debug and diagnosis software		MW POS in Windows® environment
Dedicated signals		Encoder input (A + B + Z), Line Driver type
		STEP/DIRECTION outputs, with frequency up to 100 kHz, Line Driver type
Digital inputs		16, optoisolati, configurabili PNP o NPN, liberamente programmabili
Analogue inputs		2, from 0 to 10V, freely programmable
Digital outputs		15, Line Driver type, PNP, freely programmable
Analogue outputs		1, from 0 to 10V, freely programmable
Controls available		- Search for home position on the end stop, up against the stop, on the end stop and the encoder mark, up against the stop and the encoder zero mark; - Positioning in relative or absolute mode; - Force control; - Closed-loop motion control and step-loss control in the case of STEPPING motors with encoder; - Integrated brake control in the case of motors with a brake; - Possible control of multiple separate drivers in parallel for concurrent applications; - Complementary and logical instructions for complex work cycles, such as: timings; repetitions; analogue and digital I/O control; variables control; tests

DIMENSIONS

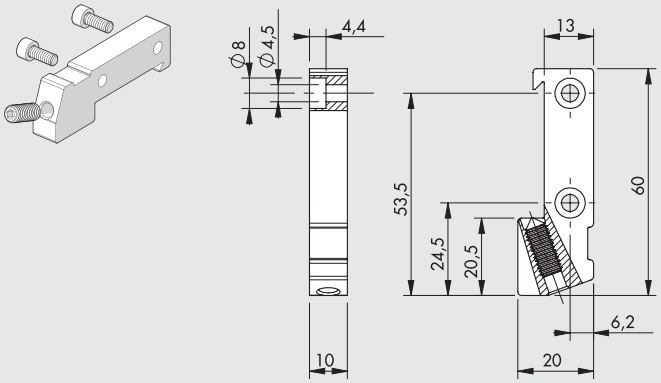


Below is a list of Phoenix Contact codes for the board connectors.

Connector	Description	Code Phoenix Contact
C11	2-pin plug with screw connection, MC 1.5/2-ST-3.5	1840366
C6	3-pin plug with screw connection, MC 1.5/3-ST-3.5	1840379
C3	4-pin plug with screw connection, MC 1.5/4-ST-3.5	1840382
C7, C9	7-pin plug with screw connection, MC 1.5/7-ST-3.5	1840418
C1, C8, C10	8-pin plug with screw connection, MC 1.5/8-ST-3.5	1840421
C2	12-pin plug with screw connection, MC 1.5/12-ST-3.5	1840463

ACCESSORIES

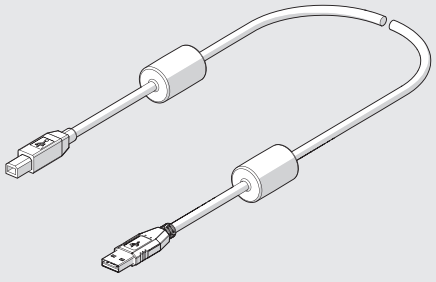
BRACKET MOUNTAING ON OMEGA BAR (DIN EN 50022)



Code	Description	Weight [g]
095000M000	Bracket mountaing ***e***.motion / ***e***.drive on Omega bar (DIN EN 50022)	30

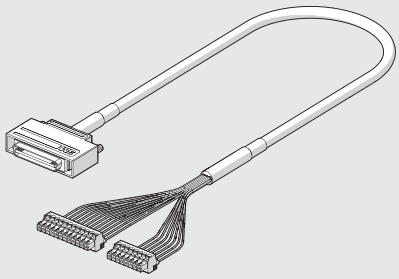
Note: Individually packed with 2 screws M4x10, 1 M6x16 grub screw

CABLE USB



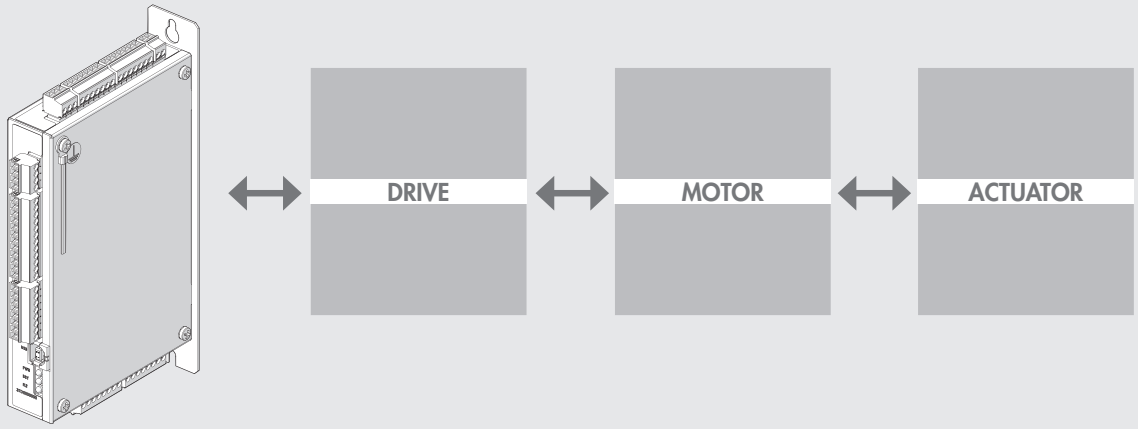
Code	Description	Weight [g]
37C0030000	Cable for USB 2.0 male A-B connector with ferrite core, for connecting the ***e***.motion / ***e***.drive board to a PC, 3 m	150

CABLE FOR BRUSHLESS DRIVERS



Code	Description	Weight [g]
37C2510000	Cable for connecting the ***e***.motion board to Sanyo Denki RS_A0_ driver, 1 m	130
37C2510001	Cable for connecting the ***e***.motion board to Delta ASDA A2 driver, 1 m	130

CONNECTION SCHEME



NOTES

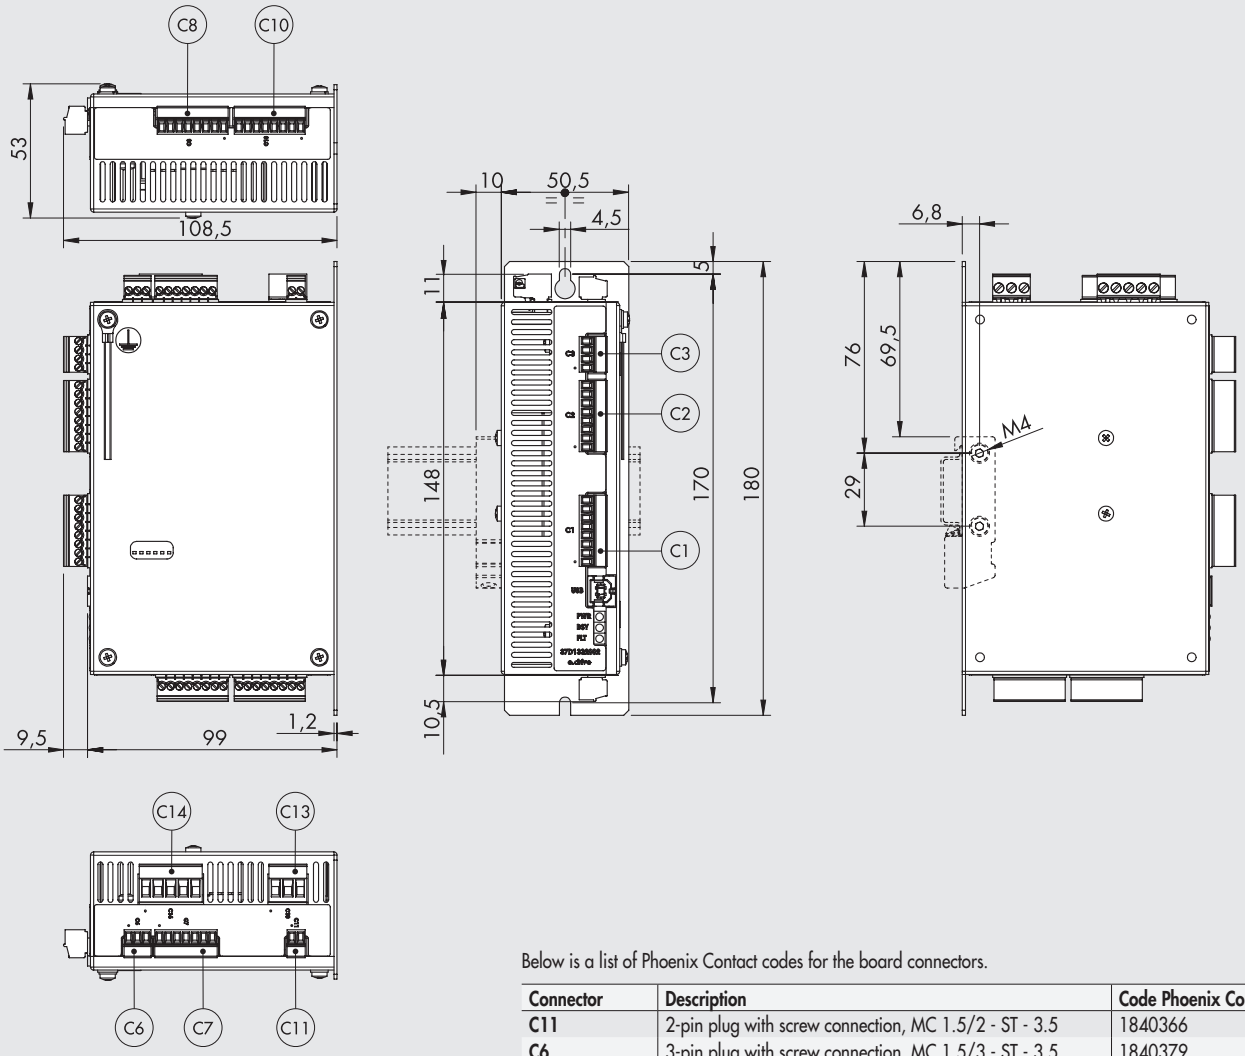
PROGRAMMABLE STEPPING MOTOR DRIVE - *e*.drive

METAL WORK PNEUMATIC

It can be used to control, easily and intuitively, electric cylinders that use a STEPPING motor with a rated current of up to 6A, two phases, with four, six or eight output wires. It connects up to a PC via a USB port and the user is provided with motion control configuration, programming and debugging environment, which allows you to create complex work cycles as it can handle both digital and analogue inputs and outputs, thanks to a user-friendly language (MW DRIVE) and a series of simple instructions and functions.
It consists of two electronic boards housed in a metal box that has been designed to be fixed onto a wall or to a DIN rail, using an accessory, and is equipped with removable screw connectors for wiring.
The electronic boards can control both the logic "motion control" stage and the power supply stage.
This independent system is ideal for use in stand-alone applications not requiring the use of any PLC.
The power stage consists of a ministep bipolar chopper drive. It is characterised by a supply voltage of up to 55VDC for the power supply side and 24VDC for the logic side, compact dimensions and great flexibility of use.

TECHNICAL DATA		
Code		**37D1332002**
Motion control logic power supply	VDC	24
Drive power supply	VDC	24 to 55
Motor phase peak current	A	1 to 6
Temperature range	°C	-20 to 40
Relative humidity (without condensation)	%	5 to 85
Bipolar motor inductance (1.8° angle)	mH	1 to 12
Dimensions	mm	148 x 99 x 50.5
Weight	g	790
Degree of protection		IP20
Communication interface		Serial USB port for connection to PC
Configuration/programming/debug and diagnosis software		MW DRIVE in Windows® environment
Dedicated signals		Encoder input (A + B + Z), 5V line driver or 24V Push-Pull/Open collector
Digital inputs		14
Digital outputs		7
Analogue inputs		2, from 0 to 10V, freely programmable
Analogue outputs		1, from 0 to 10V
Controls available		- Can be used with motors with a 1.8° base angle, 200 pulses/rev.; - Step Mode settable in various ways: Full Step, Half Step, 1/4, 1/8, 1/16 of step; - Integrated linear position transducer by connecting directly to the analogue output; - Automatic 60% reduction of the current supplied with motor stopped; - Possible dynamic regulation of the current supplied via cycle software instructions, for energy-saving purposes; - Home position search on limit switch, mechanical stop, encoder limit switch and zero mark, encoder mechanical stop and zero mark; - Positioning in relative or absolute mode; - Closed-loop motion control and step-loss control in the case of STEPPING motors with an encoder; - Integrated, automatic brake control via dedicated digital output in the case of motors with a brake; - Complementary and logical instructions for complex work cycles, such as: timings; variables control; test; analogue and digital I/O control

DIMENSIONS



Below is a list of Phoenix Contact codes for the board connectors.

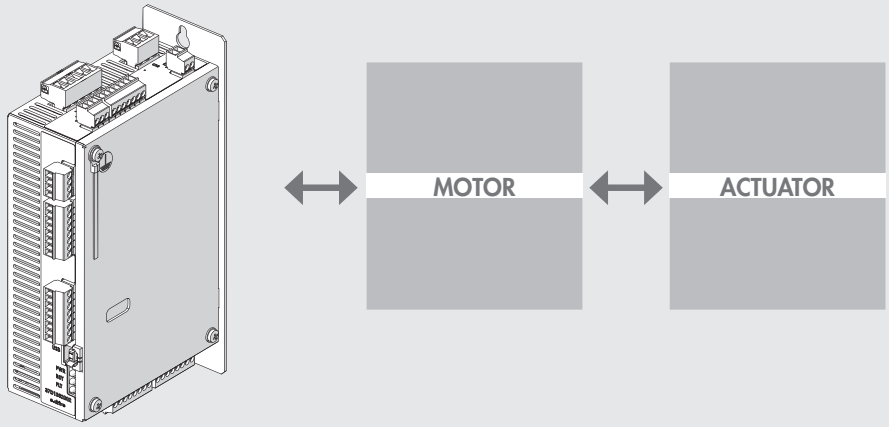
CONNECTION SCHEME



NOTES

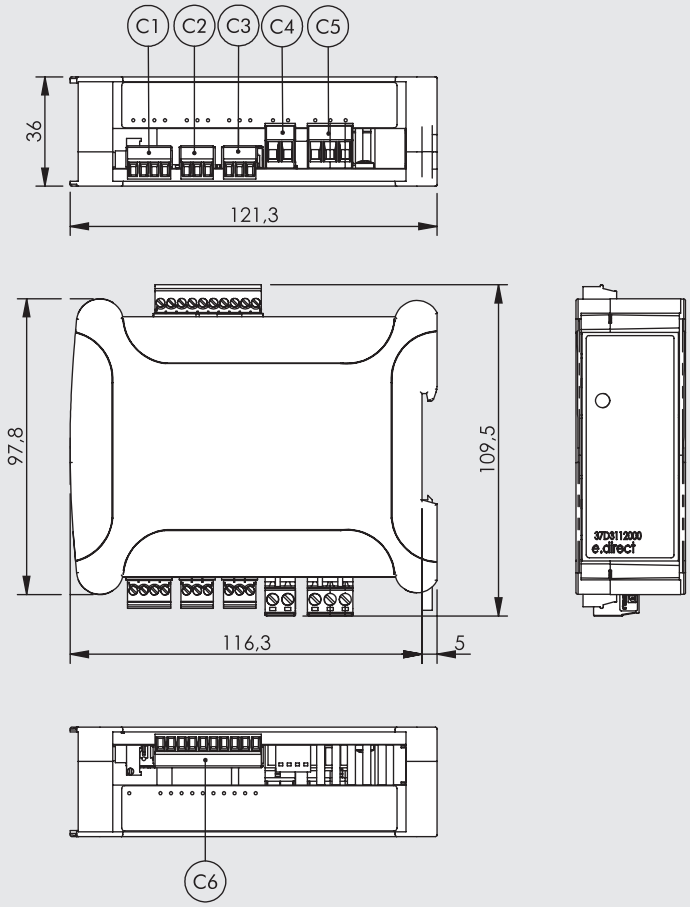
e.direct DRIVE
FOR DIRECT CURRENT MOTORS

With the e.direct drive for direct current motors, a 24VDC motor can be easily controlled and run. The electronic board is enclosed in a plastic housing designed for DIN rail mounting.
When activating the "CW" and "CCW" inputs, the motor starts running alternately clockwise and anticlockwise.
Two digital sensor inputs are provided to stop motor rotation upon activation.
The two stop signals are made available as outputs for possible connection to PLCs.
When activated, two digital sensor inputs are provided to stop motor rotation. The two stop signals are made available as outputs for possible connection to a PLC.
During acceleration and braking, the drive prevents mechanical stress on the motor and excessive energy regeneration.
Braking takes place dynamically, stopping the rotation immediately to avoid unwanted extra travel.
The rotation speed can be varied locally via the multi-turn trimmer installed on the board, or remotely, even continuously, via the analog input.
The board is equipped with 2 Hall sensor encoder inputs, NPN type and 5VDC power supply, which are fed back on two 24VDC encoder outputs, which adapt the signals coming from the Hall sensors to PLC inputs type OPEN DRAIN - PNP 24VDC.
The maximum current to be supplied to the motor can range between 1A, 2A, 3.5A and 5A via two DIP switch selectors.
When the board is not powered and the motor is stopped, the motor phases are short-circuited to increase braking torque.

TECHNICAL DATA		
Code		**37D3112000**
Motor and auxiliary power supply	VDC	24 ±15%
Maximum power voltage	VDC	30
Wattage	W	150
Current	A	1, 2, 3.5, 5 (Dip-switch selectable)
Temperature range	°C	-20 to 40
Relative humidity (without condensation)	%	5 to 85
Dimensions	mm	110 x 121 x 36
Weight	g	160
Degree of protection		IP20
Digital inputs		- no. 2, type PNP 24VDC motor rotation control (CW/CCW); - no. 2, type OPEN DRAIN - PNP 24VDC limit switch (LS); - no. 2, type NPN 5VDC for encoder (Hall sensors).
Digital outputs		- no. 2, type 24VDC OPEN DRAIN - PNP suitable for PNP 24VDC PLC for limit switch (LS); - no. 2, 24VDC: adapting signals from Hall sensors to PLC inputs type OPEN DRAIN - PNP 24VDC.
Analogue inputs		- no. 1, 0-10VDC speed adjustment from PLC or potentiometer (31400 Ω input impedance); - Internal trimmer for manual speed adjustment (0-100%).
Protections		- Motor output overcurrent protection; - Phase-to-phase short-circuit protection on motor; - Microprocessor over-temperature protection (150°C).
Signals		- Overvoltage (Vsupply>30VDC) - Under-voltage (Vsupply<18VDC); - With fault diagnostic output (OPEN DRAIN - PNP); - Active output corresponds to one of the FAULT statuses.

N.B.: A delayed, external fuse of a value appropriate to the set current must be provided in the system.
An appropriate external mains filter must be placed on the power supply to avoid disturbances generated by the drive.

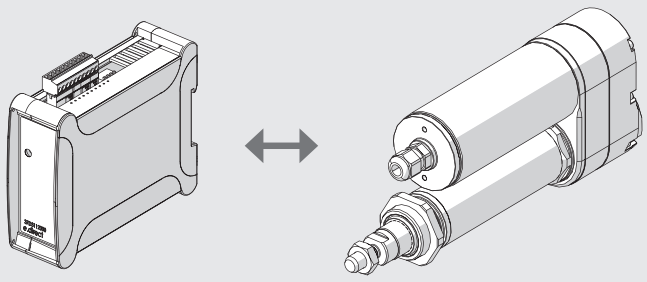
DIMENSIONS



Below is a list of Phoenix Contact codes for the board connectors.

Connector	Description	Code Phoenix Contact	Code Phoenix Contact BASIC LINE
C1	4-pin plug with screw connection, MC 1.5/4 - ST - 3.5	1840382	5441223
C2, C3	3-pin plug with screw connection, MC 1.5/3 - ST - 3.5	1840379	5441210
C4	2-pin plug with screw connection, MC 2.5/2 - ST - 5	1754449	5441171
C5	3-pin plug with screw connection, MC 2.5/3 - ST - 5	1754465	5448242
C6	10-pin plug with screw connection, MC 1.5/10 - ST - 3.5	1840447	5447560

EXAMPLE OF CONNCETION



DRIVES FOR STEPPING MOTORS

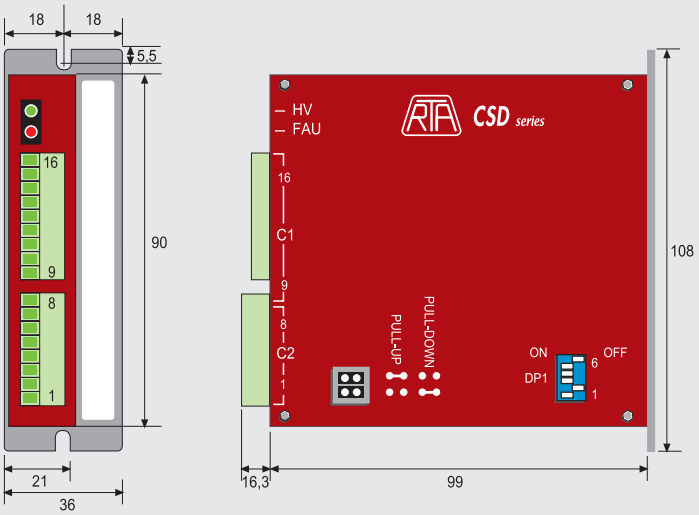
4.4A - 48VDC DRIVE FOR STEPPING MOTORS

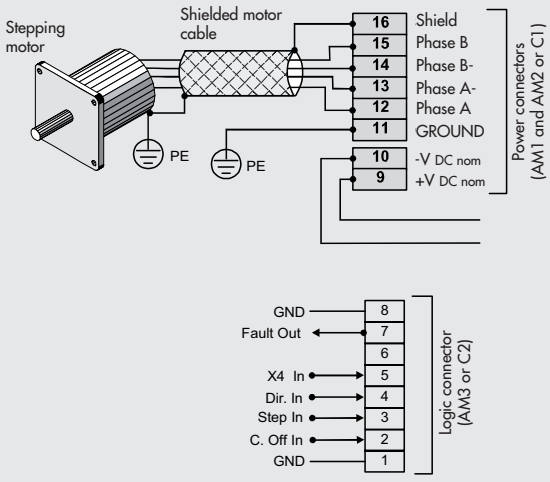
This is a ministep bipolar chopper drive made by RTA S.r.l. It comes with a STEP & DIRECTION interface for piloting low/medium-power two-stage STEPPING motors with four, six or eight terminals.
It has a supply voltage range up to 48VDC, compact dimensions and considerable operating flexibility. It consists of a board housed in a metal box, which does not require external ventilation, and comes with separate logic and power pull-out screw connectors. It can control STEPPING motors with a nominal current up to 4.4A, the perfect choice for low/medium-power applications using small motors.

DRIVE TECHNICAL DATA

Drive code		**37D1222000**
Type of STEPPING motor drive		Metal box
Dimensions	mm	90 x 99 x 21
Connectors		Screw type
Onboard power supply		NO
Control		Step and direction
Operating voltage range	VDC	24 - 48
Current range	A	2.6 - 4.4
Current values selected via a dip-switch		8
Pulses per rev values selected by dip-switch	pulse/rev	400, 800, 1600, 3200
Automatic current reduction with motor off		YES (50%)
Type of inputs		Pull-up or Pull-down, settable
Protections		Maximum and minimum voltage. Motor output short-circuiting. Thermal protection. Electronic damping circuit for maximum control of noise and vibration.

OVERALL DIMENSIONS AND WIRING DIAGRAM





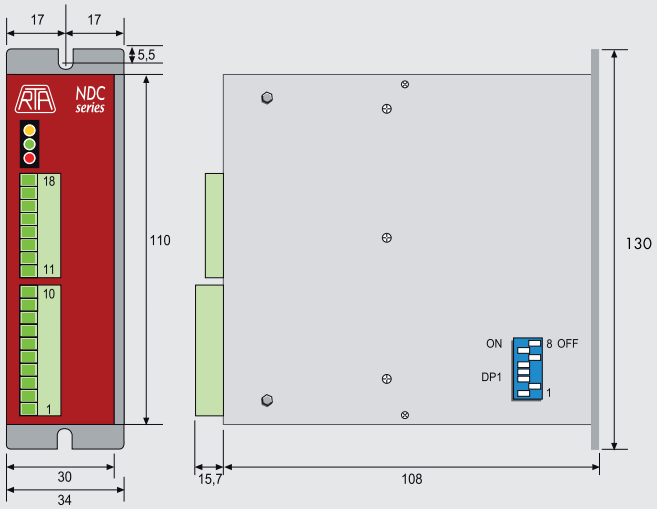
6A - 75VDC DRIVE FOR STEPPING MOTORS

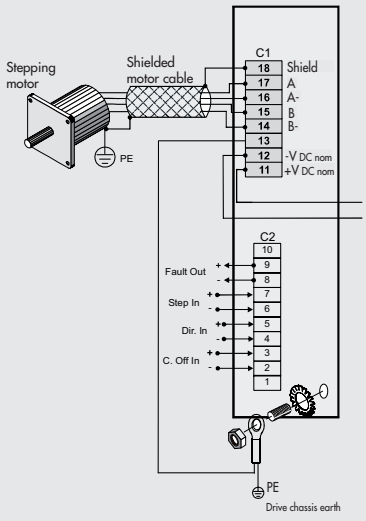
This is a ministep bipolar chopper drive made by RTA Srl. It comes with a STEP & DIRECTION interface for piloting medium-low power two-stage STEPPING motors with four, six or eight terminals.
It has a supply voltage range up to 75VDC, compact dimensions and considerable operating flexibility. It consists of a board housed in a metal box and comes with separate logic and power pull-out screw connectors. It can control STEPPING motors with a nominal current up to 6A, the perfect choice for medium power applications using small and medium-size motors.

DRIVE TECHNICAL DATA

Drive code		**37D1332000**
Type of STEPPING motor drive		Metal box
Dimensions	mm	110 x 108 x 34
Connectors		Screw type
Onboard power supply		NO
Control		Step and direction
Operating voltage range	VDC	24 - 75
Current range	A	1.9 - 6
Current values selected via a dip-switch		8
Pulses per rev values selected by dip-switch	pulse/rev	400, 500, 800, 1000, 1600, 2000, 3200, 4000
Automatic current reduction with motor off		YES (50%)
Type of inputs		Opto-isolated
Protections		Maximum and minimum voltage. Motor output short-circuiting. Thermal protection. Electronic damping circuit for maximum control of noise and vibration.

OVERALL DIMENSIONS AND WIRING DIAGRAM





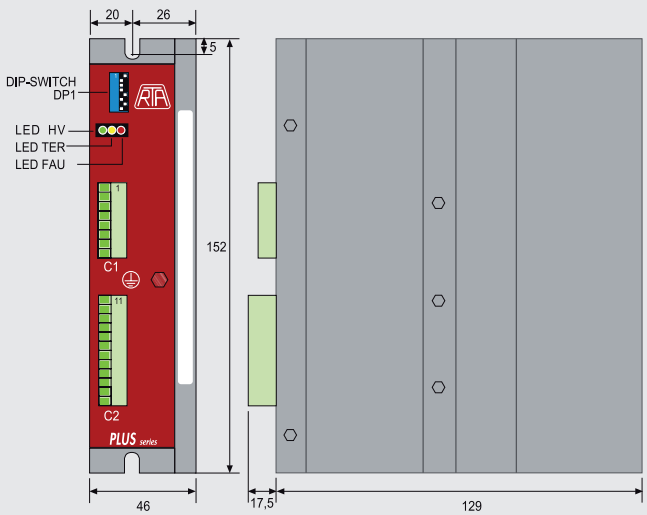
6A - 140VDC, 10A - 62VAC DRIVE FOR STEPPING MOTORS

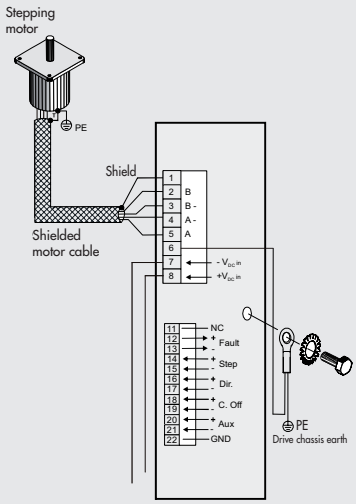
These are two ministep bipolar chopper drives made by RTA S.r.l.
They come with a STEP & DIRECTION interface for piloting medium/high-power two-stage STEPPING motors with four, six or eight terminals.
They consist of a board housed in a metal box, which does not require external ventilation, and come with separate logic and power pull-out screw connectors.
Drive code 37D1442000 is characterised by a voltage range up to 140VDC, compact dimensions and considerable operating flexibility.
This drive can control STEPPING motors with a nominal current up to 6A, the perfect choice for medium-power applications requiring a DC supply.
Drive code 37D1552000 is characterised by a voltage range up to 62VAC, compact dimensions and considerable operating flexibility.
This drive can control STEPPING motors with a nominal current up to 10A, the perfect choice for medium-power applications requiring an AC supply.

DRIVE TECHNICAL DATA

Drive code		**37D1442000**	**37D1552000**
Type of STEPPING motor drive		Metal box	
Dimensions	mm	152 x 129 x 46	
Connectors		Screw type	
Onboard power supply		NO	
Control		Step and direction	
Operating voltage range		77 - 140 VDC	28 - 62 VAC
Current range	A	1.9 - 6	3 - 10
Current values selected via a dip-switch		8	
Pulses per rev values selected by dip-switch	pulse/rev	400, 500, 800, 1000, 1600, 2000, 3200, 4000	
Automatic current reduction with motor off		YES (50%)	YES (50%)
Type of inputs		Opto-isolated	
Protections		Maximum and minimum voltage. Motor output short-circuiting. Thermal protection. Electronic damping circuit for maximum control of noise and vibration.	

OVERALL DIMENSIONS AND WIRING DIAGRAM





6A - 110 - 230VAC DRIVE FOR STEPPING MOTORS

This is a ministep bipolar chopper drive made by RTA Srl. It comes with a STEP & DIRECTION interface for piloting medium-low power two-stage STEPPING motors with four, six or eight terminals.
It has a supply voltage range up to 230VAC, compact dimensions and considerable operating flexibility. It consists of a board housed in a metal box and comes with separate logic and power pull-out screw connectors. It can control STEPPING motors with a nominal current up to 6A, the perfect choice for medium-high power applications using medium and big-size motors.

DRIVE TECHNICAL DATA

Drive code		**37D1362001**
Type of STEPPING motor drive		Metal box
Dimensions	mm	180 x 173 x 53
Connectors		Screw type
Onboard power supply		NO
Control		Step and direction
Operating voltage range	VAC	Single-phase 110 - 230
Current range	A	3.4 - 6
Motor output stage		High-efficiency CHOPPER with IGBT final stage output
Current values selected via a dip-switch		8
Pulses per rev values selected by dip-switch	pulse/rev	400, 500, 800, 1000, 1600, 2000, 3200, 4000
Automatic current reduction with motor off		YES
Type of inputs		Opto-isolated
Protections		Maximum and minimum voltage. Motor output short-circuiting. Thermal protection.
		Electronic damping circuit for maximum control of noise and vibration.
Standards		UL and CSA
Other features		Possibility to switch off motor current via an external logic control device.
		Electronic sound-damping circuit for enhanced reduced noise and mechanical vibration at low and medium speed.
		Storage and reporting of the intervention of protection circuits.
		It must be coupled with STEPPING motors designed for high-voltage rating and flanges not below 86 mm.
		No need for forced ventilation.

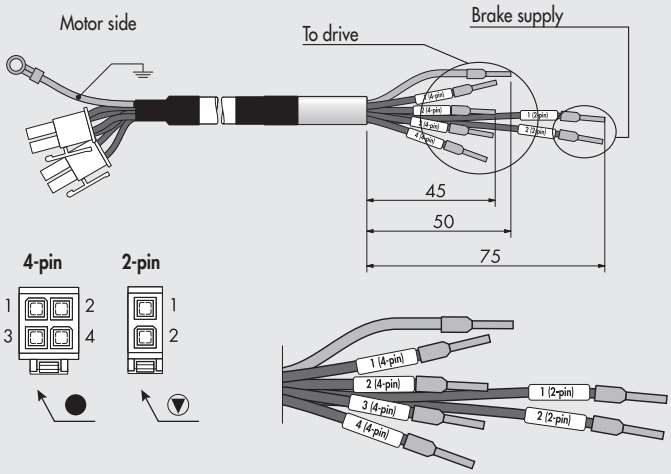
CABLES FOR B&R MOTOR

POWER CABLE FOR MOTOR WITH BRAKE

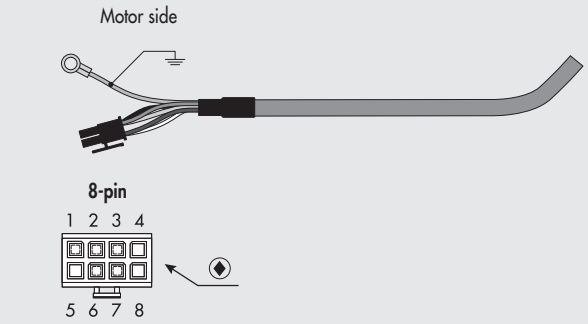


Code	Description
37C1330000	Power cable for stepping motor with brake, 3 metres
37C1350000	Power cable for stepping motor with brake, 5 metres

For use with STEPPING motors with brake and STEPPING motor code 37M1470000.

	Pin	Function	Corresponding wire colour
4-pin connector	1	A\	Black (1 4-pin)
	2	B\	Black (2 4-pin)
	3	A	Black (3 4-pin)
	4	B	Black (4 4-pin)
2-pin connector	1	24VDC brake	Black (1 2-pin)
	2	GND	Black (2 2-pin)

ENCODER CABLE



Code	Description
37C1230000	Encoder cable for stepping motors with brake, 3 metres
37C1250000	Encoder cable for stepping motors with brake, 5 metres

Optional – Can be used with STEPPING motor with encoder and brake.

8-pin connector	Function		Corresponding wire colour
1	A	A	Green
2	B	B	Yellow
3	R	R	Gray
4	-	NC	-
5	-	NC	-
6	+ 24VDC	Encoder +24 V supply	Red
7	COM	Encoder 0 V supply	Blue
8	-	NC	-

DRIVES FOR BRUSHLESS MOTORS

DRIVE FOR 200W, 400W, 750W, 1000W SANYO DENKI BRUSHLESS MOTORS

This drive made by SANYO DENKI is suitable for piloting BRUSHLESS motors.
It features compact dimensions and considerable operating flexibility.
It consists of a board housed in a metal box. It comes with pull-out screw connectors for power and plug connectors for logic.
It can control BRUSHLESS motors with a nominal current up to 30A.
All the system parameters can be configured and controlled using SANMOTION software.

DRIVE TECHNICAL DATA		
Drive code		**37D2400008**
Nominal power		200 - 400 - 750 - 1000
Type of drive for BRUSHLESS motors		Metal box
Dimensions	mm	50 x 160 x 130
Power connectors and motor power		Plug-type 3M
Encoder connectors and signals		Plug-type 3M
Max output current	A	30
Motor output stage		IGBT, PWM control, sinusoidal current
Power voltage		Single-phase or three-phase (user configurable) 200-230VAC (+10%, -15%) 50/60 Hz (± 3 Hz)
Logic voltage		Single-phase 200-230VAC (+10%, -15%) 50/60 Hz (± 3 Hz)
Control		With analogue signal (proportional to speed and torque).
		Pulse-train (clock + direction; forward + backward pulse; 90° phase difference)
		8 inputs and 8 outputs, user configurable.
		In the event of pulse-train command, the control system outputs should be the Line Driver type.
		If the outputs are the open-collector type, you can use a 37D2000000 board,
		which is sold separately (see accessories).
Auto-tuning		YES
Communication interface		Mini USB for settings and monitoring via a personal computer.
Protections		Integrated against overloads, input extra-voltages,
		incorporated filters for suppressing the system's own resonance frequencies
Standards		CE, UL and CSA.
Other features		5-digit display and programming keypad.
		Integrated closed-loop system with position, speed and torque control modes.
		Instant changeover option: position + speed; position + torque; speed + torque.
		Automatic dynamic braking circuit in a alarm and power-off conditions.
		Connector for external braking resistance (optional).
		Configuration and control software.

ACCESSORIES

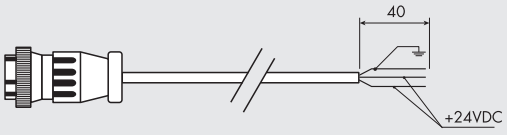
⑥ ENCODER CABLE

Code	Description
37C2230005	Brushless motor-drive-encoder connecting cable, 3 m
37C2250005	Brushless motor-drive-encoder connecting cable, 5 m
37C2230004	Brushless motor-drive-encoder connecting dynamic cable, 3 m
37C2250006	Brushless motor-drive-encoder connecting dynamic cable, 5 m
37C2200004	Brushless motor-drive-encoder connecting dynamic cable, 10 m

⑦ MOTOR POWER CABLE

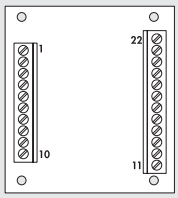
Code	Description
37C2130005	Brushless motor-drive connecting cable, 3 m
37C2150005	Brushless motor-drive connecting cable, 5 m
37C2130004	Brushless motor-drive connecting dynamic cable, 3 m
37C2150004	Brushless motor-drive connecting dynamic cable, 5 m
37C2100004	Brushless motor-drive connecting dynamic cable, 10 m

BRAKE CABLE



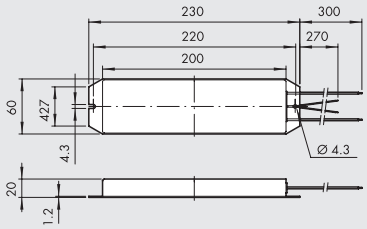
Code	Description
37C2330000	Brushless motor-brake connecting dynamic cable, 3 m
37C2350000	Brushless motor-brake connecting dynamic cable, 5 m
37C2310000	Brushless motor-brake connecting dynamic cable, 10 m

LINE-DRIVER INTERFACE BOARD



Code	Description
37D2000000	BRINT.A line driver interface board

EXTERNAL BRAKING RESISTANCES



Code	Description	For drive code
37D2R00000	220W 50 Ω braking resistance	37D2400008

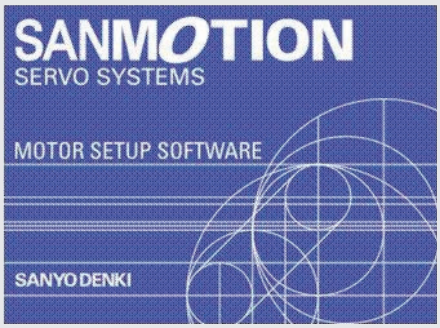
Under certain operating conditions, such as sudden deceleration with high inertial load, it may be necessary to dissipate externally the reverse energy generated by the motor. The drive indicates this requirement via a specific alarm. Excess energy is dissipated externally via a braking resistance.

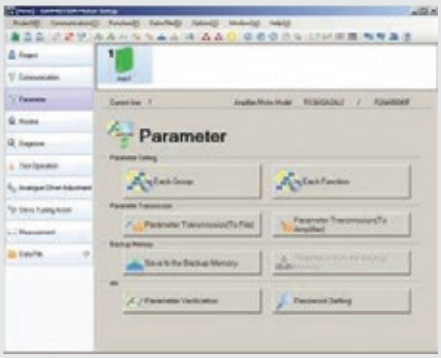
CONFIGURATION SOFTWARE

SANMOTION configuration software is used for parameter setting and complete control of all functions of the system.
The software includes a detailed description of each parameter.
In addition to parameter setting SANMOTION software can accurately analyze operation of the system via the following functions.

- Monitor: real-time display of all details about the system.
- Diagnosis: shows the state of servo amplifier, the type of alarms and the possible causes.
- Test operation: performs the velocity system test with JOG Operation, the positioning test with Positioning Operation, the detection of the origin signal and Serial Encoder Clear.
- Servo Tuning: performs auto-tuning notch filter and auto-tuning vibration suppression frequency.
- Operation Trace: this function shows operational state and parameters as speed and torque, in waveform display on an integrated oscilloscope.
- System Analysis: used to study the system's frequency response to identify and correct any mechanical resonance phenomena.

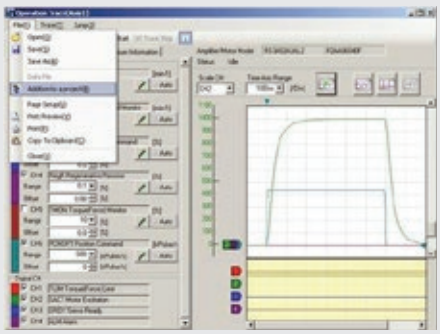
The software can freely be downloaded from Sanyo Denki website at the following link:
https://www.sanyodenki.com/products/sanmotion-softwareindex.html
file SANMOTION MOTOR Setup Software.





GRAPHIC MONITOR

Thanks to the integrated oscilloscope function, some important system parameters, such as speed and torque, can be displayed and saved on the PC monitor.
Data can be downloaded and saved in compatible Excel format.
The time setting range is 10 ms to 2 s.
Single values acquired and displayed can be read using the cursor.



DRIVE FOR 100W, 200W, 400W, 750W DELTA BRUSHLESS MOTORS

The DELTA ASD-A2-0121-M drive can only be used with a DELTA 100W motor, the DELTA ASDA-A2-0221-M drive can only be used with a DELTA 200W motor, the DELTA ASDA-A2-0421-M drive can only be used with the DELTA 400W motor, and the DELTA ASD-A2-0721-M drive can only be used with a DELTA 750W motor.
The drives are characterized by overall contained dimensions and great versatility of use. They consist of a circuit board situated in a metal box, complete with extractible power screw connectors and logics connectors.

WIRING DIAGRAM FOR 100W - 200W - 400W - 750W BRUSHLESS MOTOR DRIVES

① POWER CONNECTOR: 230VAC, single-phase and three-phase (user configurable). **Included in the supply**.
Separate supply section for logic/signal and power electronics.
Integrated circuits protecting against overloads and input extra-voltages.
② CONNECTOR: for external braking resistance code 37D2R00000 (optional).
③ 5-DIGIT DISPLAY and PROGRAMMING KEYPAD: to display and modify parameters and monitor system operation in real time.
④ EXTERNAL ENCODER CONNECTOR (optional): possibility of connecting an external encoder to create a feedback of the linear axis position. Can support encoders A, B, Z, supplied at 5VDC.
⑤ CANopen CONNECTOR (optional): this drive is designed for communication with other devices via CANopen Fieldbus.
⑥ SIGNAL CONNECTOR: pulse-train command (clock + direction; forward + backward pulse; 90° phase difference) or with analogue signal (proportional to speed or torque) 8 inputs and 5 outputs, user configurable.
⑦ ENCODER CONNECTOR: connection for 100W - 200W - 400W - 750W BRUSHLESS motor encoder.
⑧ IEEE 1394 PC CONNECTOR: settings and possible connection to other devices via RS485 or RS232 (cable not included in the supply).
⑨ USB PC CONNECTOR: settings and monitor through personal computer (not included in the supply).
Data acquisition is only possible via this connection.
⑩ MOTOR POWER CONNECTOR

DRIVE FOR 3kW DELTA BRUSHLESS MOTORS

It is a DELTA ASDA-A2-3043-M drive to be used only with a DELTA 3kW motor.
It features compact dimensions and considerable operating flexibility.
It consists of a board housed in a metal box. It comes with pull-out screw connectors for power and plug connectors for logic.

DRIVE TECHNICAL DATA		
Drive code		**37D2600001**
Nominal power		3kW
Type of drive for BRUSHLESS motors		Metal box
Dimensions	mm	245 x 205.4 x 123
Power connectors and motor power		Screw type
Encoder connectors and signals		Plug-type 3M
Max output current	A	33.32
Motor output stage		IGBT, PWM control, sinusoidal current
Power voltage		Three-phase from 380VAC to 480VAC ±10% 50/60 Hz (± 3 Hz)
Logic voltage		24VDC ±10%
Control		With analogue signal (proportional to speed and torque).
		Pulse-train (clock + direction; forward + backward pulse; 90° phase difference)
		fieldbus with "CANopen" communication protocol
		8 inputs and 5 outputs, user configurable.
		In the event of pulse-train command, the control system outputs should be the Line Driver type.
		If the outputs are the open-collector type, you can use a 37D2000000 board,
		which is sold separately (see accessories).
Auto-tuning		Yes
Communication interface		Serial USB port for settings and monitoring via a personal computer
Protections		Integrated against overloads, input extra-voltages,
		incorporated filters for suppressing the system's own resonance frequencies.
Standards		CE and UL
Other features		5-digit display and programming keypad.
		Integrated closed-loop system with position, speed and torque control modes.
		Control mode: position + speed; position + torque; speed + torque.
		Automatic dynamic braking circuit in a alarm and power-off conditions.
		Connector for external braking resistance (optional).
		Configuration and control software (optional).
Suitable for motors code		**37M2770000 - 37M4770000**
Connecting cable:		
Brushless **motor-drive** connecting cable, 3 metres		**37C3130001**
Brushless **motor** with **brake-drive** connecting cable, 3 metres		**37C3730000**
Brushless **motor-drive-encoder** connecting cable, 3 metres		**37C3230001**
Brushless **motor-drive** connecting cable, 5 metres		**37C3150001**
Brushless **motor** with **brake-drive** connecting cable, 5 metres		**37C3750000**
Brushless **motor-drive-encoder** connecting cable, 5 metres		**37C3250001**

WIRING DIAGRAM FOR 3kW BRUSHLESS MOTOR DRIVES

① LOGIC POWER CONNECTOR: 24VDC.
Included in the supply. Power section for logic electronics.
② POWER CONNECTOR: 400VAC, three-phase.
Included in the supply. Power signal supply section.
Integrated circuits protected against overload, input extra-voltages.
③ MOTOR POWER CONNECTOR
④ CONNECTOR: for external braking resistance code 37D2R00004 (optional).
⑤ 5-DIGIT DISPLAY and PROGRAMMING KEYPAD: to display and modify parameters and monitor system operation in real time.
⑥ EXTERNAL ENCODER CONNECTOR (optional): possibility of connecting an external encoder to create a feedback of the linear axis position. Can support encoders A, B, Z, supplied at 5VDC.
⑦ CANopen CONNECTOR (optional): this drive is designed for communication with other devices via CANopen Fieldbus.
⑧ SIGNAL CONNECTOR: pulse-train command (clock + direction; forward + backward pulse; 90° phase difference) or with analogue signal (proportional to speed or torque) 8 inputs and 5 outputs, user configurable. **Included in the supply**.
⑨ CENCODER CONNECTOR: connection for 3kW BRUSHLESS motor encoder.
⑩ IEEE 1394 PC CONNECTOR: settings and possible connection to other devices via RS485 or RS232 (cable not included in the supply).
⑪ USB PC CONNECTOR: settings and monitor through personal computer (not included in the supply).
Data acquisition is only possible via this connection.

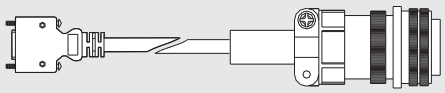
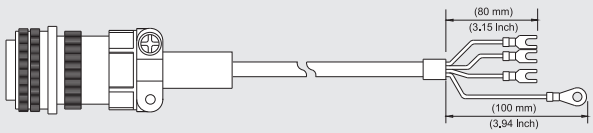
ACCESSORIES

⑥ CAVO ENCODER



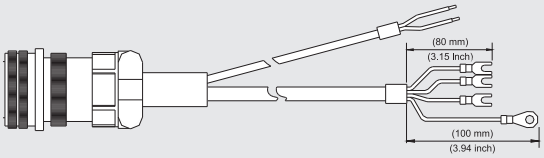
Code	Description
37C3230001	3kW Brushless motor-drive-encoder connecting cable, 3 m
37C3250001	3kW Brushless motor-drive-encoder connecting cable, 5 m

⑦ MOTOR POWER CABLE



Code	Description
37C3130001	3kW Brushless motor-drive connecting cable, 3 m
37C3150001	3kW Brushless motor-drive connecting cable, 5 m

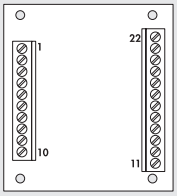
MOTOR POWER CABLE + BRAKE



Code	Description
37C3730000	3kW brushless motor drive connecting cable + brake, 3 m
37C3750000	3kW brushless motor drive connecting cable + brake, 5 m

ACCESSORIES FOR DELTA DRIVES

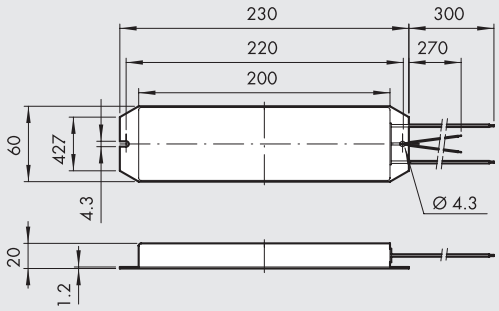
LINE-DRIVER INTERFACE BOARD



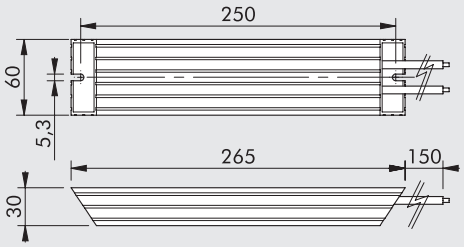
Code	Description
37D2000000	BRINT.A line driver interface board

EXTERNAL BRAKING RESISTANCES

220W



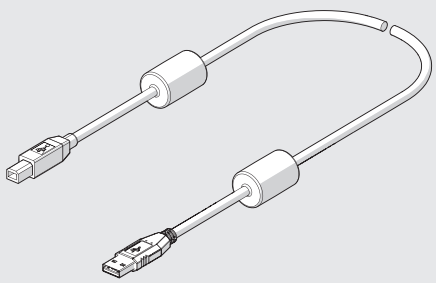
400W



Code	Description	For drive code
37D2R00000	220W 50 Ω braking resistance	37D2100000 - 37D2200001 37D2300000
37D2R00004	400W 40 Ω braking resistance	37D2600001 - 37D2400007

Under certain operating conditions, such as sudden deceleration with high inertial load, it may be necessary to dissipate externally the reverse energy generated by the motor. The drive indicates this requirement via a specific alarm. Excess energy is dissipated externally via a braking resistance.

CABLE USB



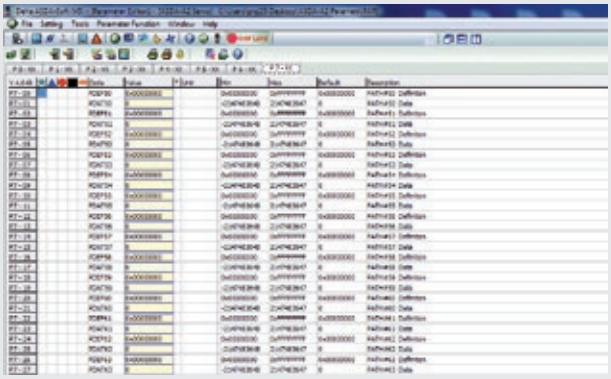
Code	Description	Weight [g]
37C0030000	Cable for USB 2.0 male A-B connector with ferrite core, for connecting the drive brushless to a PC, 3 m	150

CONFIGURATION SOFTWARE ASDASoft

ASDASoft communication software is used for parameter setting and complete control of all functions of the system.
The configuration software can be downloaded free from the website http://www.deltaww.com
Access to parameter setting is done through the setup menus.
The software includes a detailed description of each parameter.
In addition to parameter setting ASDASoft software can accurately analyse operation of the system via the following functions.

- Status Monitor: real-time display of all details about the system.
- Data Scope: a complete oscilloscope with 4 channels that can be selected as desired among analogue and digital signals.
- System Analisis: used to study the system's frequency response to identify and correct any mechancal resonance phenomena.

JOG speed modes are also available (Digital IO/Jog Control) and Gain Auto-Tuning.



GRAPHIC MONITOR

Thanks to the integrated oscilloscope function, some important system parameters, such as speed and torque, can be displayed and saved on the PC monitor.
Data can be downloaded and saved in compatible Excel format.
Displayed can be read using the cursor.
